3451. NVDI PROBLEMS!

Newsgroup: comp.sys.atari.st
Date: 1994-09-08 02:09:58 UTC
From: amez1@pfs01.cc.monash.edu.au
Message-ID: <amez1.34.2E6E7276@pfs01.cc.monash.edu.au>
Source record: 180996

I have been given a copy of NVDI V2.50 but unfortunately the entire program is in German! even the manual. So could someone please tell me how to install NVDI.

I read a review of NVDI V2.50 in an older issue of ST Review and it said that installing the program was easy. All that is required is to load up an installation program which then asks you for the disk serial number, your address and the drive you want to boot NVDI from and that's it! What does it mean by DISK SERIAL NUMBER and ADDRESS??

If you can help me install NVDI V2.50 then P-Mail me on:

Does anybody have a list of the procedures that a ST/E goes through when the power is turned on? I suspect that list might help a few people track down their problems easier.

> What could be the cause is: one of the three Atari custom chips (Glue,

3460. RE: Falcon HD RECORDING

Newsgroup: comp.sys.atari.st
Date: 1994-09-08 03:42:54 UTC
From: sxp17@po.CWRU.Edu
Message-ID: <34m17u$buc@usenet.INS.CWRU.Edu>
Source record: 180906

-- snip, snip . . .
Summary of previous post: What can the Falcon do and with what HW/SW with respect to Hard Disk Recording . . .

I'm sure there are a lot of people in the same boat as I am:

1) I'm a loyal Atari fan
2) Nobody I speak with in my community thinks I am sane when I rave about the capabilities of my 1040 ST. "Atari? The 2600? They make computers, too?"
3) I wanna get into Hard Disk recording, but have so much software for my ST that it would be a shame to change platforms, BUT
4) My Atari platform is greying around the edges . . .

Anyway, for Hard Disk Recording, you could . . .

1) Get an ALESIS ADAT (app. $2400)- 8 digital tracks to Videocassette
2) Get a TASCAM DR4D (app. $2000)- 4 digital tracks to HD
3) Get a Yamaha CBX ($1300)- still need a computer
4) Get a Windows machine + Soundcard + Software (Mega Bucks)
5) Get Digidesign Session 8 for Mac or Windows ($3000-4000?)- 8 Tracks; 10 channel automated mixer included
6) Get Digidesign Pro Tools for Mac ($15,000-30,000) depending on features, 8-16 tracks)

Or, the easiest two options . . .

1) Get a Mac 660AV or 840AV and OSC's Deck 2.0 Software (6 and 8 tracks, respectively); $1500-3000 for Mac and $300 for Software; That's all the computer gear you need.

2) Get A FALCON AND CUBASE AUDIO 16; 16 TRACKS DIGITAL; STEREO; INTEGRATED SEQUENCING SOFTWARE; UNLIMITED GRAPHIC FADERS; NOTATION; etc.); $1300 for Falcon, $700 for Software (or upgrade from Cubase 2.0 for $400)

. . . So, what I did was call SteinBerg Jones at 818-993-4091 (California) and asked them to send me literature on this. This seems to be an unbelievable deal, as the cheapest 16 track digital recording system for any computer other than this is ProTools at $30,000!! Obviously, I have been looking into this . . .

Everything I wrote here is from my head, so forgive any slight misinfo (and correct me . . .)

. . . Perhaps if enough of us Atari users called our local music shops and the big software designers inquiring about the availability of ATARI

products, they may start taking the ATARI community a little more seriously.

3462. Spectre for Falcon?

Newsgroup: comp.sys.atari.st
Date: 1994-09-08 05:42:00 UTC
From: arch@insane.apana.org.au
Message-ID: <arch.779002920@insane.apana.org.au>
Source record: 180998

I have heard various rumours and horror stories about Dave Small and the Falcon version of Spectre. Is Spectre a dirty word in this group? C'mon, someone out there in Atariland must be using 128 or GCR. I want to hear from you.

I understand Dave is having a few legal hassles at the moment. I for one would be happy to contribute to a fund to assist with legal costs.

Fight, fight, fight (them's fightin' words!).

Power PC is dead. Let us have mac emulation for Falcon, please!

This message was composed on an ST running Spectre and the fab Zterm.

Cheers

Good point. Has anyone tried the ATM font set with ghostscript and
composcript? Bundled ATMs don't tend to have the 'classic' 35 type 1
fonts btw.

False!

To implement a virtual memory system you need a virtual addressing space, to
do this you need hardware which will map ALL memory accesses from the
virtual address space to the physical address space.

>An MMU allows an architecture to implement virtual memory in a protected
>way, so that a rogue program absolutely cannot overrun or modify space
>outside that which was allocated by the kernel (this assumes no bugs in
>the kernel, which is a pipe dream if I ever heard one). In other words, an

>prevent screwups.

Memory protection has nothing to do with the ability to implement virtual
memory.

>One sterling example is MINIX. It implements virtual memory on 8086
>processors, and I presume the ST version does the same with the 68000 as well.

The 80x86 version of Minix does not have virtual memory, it has process
swapping (if that). This is available due to the use of the segmented memory
model the 80x86 chips have. This means that all addresses are split into two
parts, the the memory page number and the offset within a page. Several of
the addressing modes of the 80x86 processor use page base register relative
addressing allowing programs to be moved in memory at will, all that needs
to be altered is the page register. In other words you can copy a running
process out to disk then copy it back into memory at another location and
start it running again with ease, it also allows fork() to be implemented
easily. The down side of all this is that ALL memory accesses can only
happen within one page of memory, ie. 64k on the 80x86 (where 0 <= x < 3),
so processes can only have 64k text, 64k stack and 64k data maximum. On the
80386 and later you can set the memory segment size, so the 64k+64k+64k

limit is no longer there. The 80386 and above have protected mode etc, they contain a complete PMMU.

Minix m68k does not have this as the 68000 has a flat memory model. Even fork() has to emulated by repeatedly copying the data and stack segments every context switch! (This is known as shadowing.)

>I shudder to think of how much time I spent in the guts of that memory

>machine was named "pain" during this project. Did it work? Again, yes (after
>I got the bugs out of my memory manager modifications, that is...). As
>long as everything follows the rules, there are no problems with virtual
>memory in this fashion.

The "standard C calls" you speak of sound very good.. :-) To manipulate VM stuff you have to twiddle bits in memory (page tables) and handle exception processing.. this means some has to be done in assembler 'cos C just isn't low enough. You may find that those "standard C calls" are actually routines in another part of the kernel which do all the nasty bits for you.

>Note that we are quibbling about a semantic issue (what does "virtual memory"
>imply). I am not trying to advocate any implementation of virtual memory
>without some hardware means of enforcing memory separation. I'm just saying
>that it is certainly possible, there are many examples of such, and it can
>be useful if one is careful with the software being executed.

I'm afraid you are mistaken.. virtual memory needs the hardware to support it, as does memory protection.

Compiling it under MiNT is fine, you just need a Minix filesystem, gcc, make
and the fileutils from a.a.u.e.

GCC and all the other tools needed are in the usr.tar.gz archive from the
680x0 filesystem directory.

>btw: to all interested in atari linux, Ive gotten a pretty stable

ata_lnx03 is a hacked version of the Linux/68k 0.8 kernel, it's not really
very stable, especially the SCSI driver.

Best build Linux/68k 0.9pl2 using MiNT.

But how do you remap the physical memory with a 68010 in order to get memory
placed at the logical address which caused the bus error? You need a PMMU
for that because the 68010 can't remap memory pages.

3473. Programmimng help needed!

Newsgroup: comp.sys.atari.st
Date: 1994-09-08 11:15:00 UTC
From: jan.sjoberg@p5.secom.ct.se
Message-ID: <2e6f0395@ct.se>
Source record: 180939

Hi!

I would like some help with bit graphic enlargment. Is there any standard algorithms for enlarging/shrinking bit graphics?

My actual problem is enlarging one line of bytes by a factor approx 1.7
But if there is faster methods on 1.6 or 1.8, that's the thing for me since this has to be the fastest possible method!

Could somebody just tell me a algorithm for this simple task (2:1) too, I would be very happy!

01010011 00111001 Original bit graphic line, 2 bytes

00110011 00001111 00001111 11000011 Enlarged 2:1, 4 bytes

And the key word is FASTEST POSSIBLE!

Greets from

Jan Sjoberg, Sweden

|> has experienced any trouble using the NEC 2x or the newer 3x (4x?) drives with
|> the atari. I have a TT with MTOS 1.11. I assume I should use the CDROM.xfs.
|>

I've used a NEC-74 off and on for two years now it works fine. I know people
with the 3xi and they love it. As for which CD-Rom driver, ExtenDos works for
a lot of people, Atari's CDROM.xfs works ok, and I have written my own CDROM.xfs
that supports multiple cd drives, including the Pioneer 601 and 604.

I would recommend ExtenDos simple because it works both with and without
MiNT/Multi-Tos, and works on the ST, STe, TT, and Falcon.

I like driver because I can mount my CD drives onto the mountable file system
as U:/NEC and U:/CHINON, and not use up an icon with MiNT 1.07 and greater.
Mine also works on the ST, STe, TT, and Falcon.

>know please use direct e-mail.

If Roger registers his version, who am I to complain. I bought v 3.1 which was commercial.... V3.2 is shareware(crippleware) again. YOu can get it from the Atari Benelux support BBS
+31 3473 77584

It is easily the best spooler on the Atari platform, though I wish I knew how to tell it my program is done spooling (so that the time-out does not take effecT).

From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <RSxRmzw.lmcclure@delphi.com>
Source record: 180863

In a message dated 9-6-94, Brian Barton asked:

"This may sound like a seemingly dumb question to most of you,
but why does the drive light for my floppy stay on when I
don't have a disk in?"

Basically, your STe has not given up on looking for a floppy in the
drive. One solution would be to leave a disk (preferably formatted)
in the drive. Another would be to obtain a program such as DCLITOFF.PRG,
and place that in you AUTO folder.

That's true. However, there's only so much development time in a day. You might see something like this in a future revision, depending on how many other "trivial to add" features are ahead of it on the development queue. ;-)

Trouble is, how many ex-Atarians have or will buy a PowerPC? Enough
to make such an Atari emulator a viable product? Doubtful, considering the
expense and time involved to bring such a product to market. Too bad,
though, as it would certainly be cool and the PPC has enough punch to
theoretically make emulation -faster- than the real thing.

>A Mac at Falcon price, I expect, would be much quicker.

That's the other issue... very fast 040 Macs now cost LESS than a Falcon030.

The microphone is a mini-stereo input, and the headphone jack is of course also in stereo. With only this and Cubase Audio 16 (or even a lesser program) you can edit,mix, and listen to up to 16 channels with full control over each one. You can sample or playback raw digital sound right into or out of memory or your harddrive.
The only problem is outputting the channels independently. For this you need a device such as Analog 8 ($700) that adds a row of 8 outputs (16 channels are possible by "mapping" two channels onto one plug).

You'll find the Falcon is quite a capable musician's tool and you don't need no stinkin' $3000 Yamaha-thingee. The DSP is used internally, the DSP port is for use with things like special DSP-modems and voice-mail stuff, that kind of thing.

I have just uploaded following files into a.a.u.e:

figlet.lzh
A port of figlet, an ascii font banner program.

figfonts.lzh
Some fancier fonts for figlet (from Scarecrow's ascii archive).

clac_bin.lzh
An acc/prg version of my function calculator for programmers.
Understands all the standard things + complex numbers + functions
with multiple arguments + variables. Because Sozobon still does have
only single precision floats/doubles, some things have quite limited
scope eg. "XIMG (an ascii 'value') tops double's mantissa ;-(. My
command line version has real doubles, though. If you'll need it,
mail me.

nh_bw.lzh
My monochrome versions of Warwick's GEM NetHack 3.1.3d resource and
pictures. GEM NetHack is quite usable in monochrome although some
icons are hard to recognice because of their small size.

PL> asking soberly for help in my final decision...

Paul - I strongly suggest you find a music dealer that will
tell you THE TRUTH regarding the Falcon's abilities - he either has
blinders on or is more interested in selling you an overpriced audio
workstation. The Falcon version of Cubase Audio comes with its own
adaptors which will allow you to record direct to external hard disk
- and WON'T cost $3000 - although there is provision to also use the
Yamaha CBX with it as well - it's the ST/STe version of Audio that
requires the use of the CBX. I would suggest getting in touch with
Manny's Music in New York City, as they seem to be THE most
knowledgeable and supportive of the Atari MIDI community in the US
that I've read about; also try STeve's in California or Toad
Computers for info.

To get it from the horse's mouth - Steinberg/Jones themselves -
you can get in touch with them at 17700 Raymer St., Suite 1001,
Northridge, California, 91325; phone 818-993-4091, FAX 818-701-7452.
And you won't have to worry about support from their end - in the
August 1994 issue of ELECTRONIC MUSICIAN they stated they're with
the Atari users for the long run, in fact they're supposed to be
releasing a 16-track version of Audio that ALSO records direct to
hard disk.

I would also suggest after getting that info to go back to Mr.
Smarty-Pants and confront him with it - watch him squirm :).

... I am Porky of Borg. P-p-p-p-pre-a-pre-p-p-p-p-p. Aw, give up.

Here's a copy of an article I wrote to another newsgroup to someone
asking the same questions:

I suppose the best buy these days would be Atari Falcon with 16Mb of
RAM, a big SCSI hard disk, Steinberg's Cubase Audio 2.01 software with
FDI-interface (S/PDIF anal.+optic. in/out). A DAT-recorder would also
be nice. :-)

With this setup you can:

- Play 16 channels of Digital Audio (max. 16bit/48kHz - DAT quality)
without any external hardware. In 16 channel mode audiofiles are
decompressed in realtime with DSP (ratio 1/2) without audible loss
of quality. And there's 128 track of midi running at the same time.
- 8-channel mode works without any compression and has realtime
effects mixers. And 128 miditracks run alongside.
- 8-track mode: Record 2 channels from Falcons internal input or
digitally via FDI while listening 6 others.
In 16 track mode you can record to one mono track mono while
playing back 15 other audio channels.
- Sequence 128 tracks of Midi in perfect sync with audio.
- Edit Midievents (non-destructive) with 5 editors
incl. professional scoring which is currenly much better

than e.g Encore.
- Edit Digital Audio non-destructively: Copy, Move, Truncate, Reverse, Time-strech, Tape Pitch, crossfade, dither, rateconvert, resample with effects. etc. + there are manual and automated conversions for files from 16 track to 8 and vice versa, so it doesn't matter in which mode you start doing your song if you need to change mode later.
- Automate your mix (both midi and audio) using on-screen mixers with vol, pan, effects and EQ.
- Use a Midi keyboard to trigger audio events (with velocity) and record these actions into a sampler track for further editing.
- Make backups of your recorded audio (AIFF-files) from hard-disk to DAT , and retrive them back to disk, with software.
- This systems sound quality is as good as the quality of your DAT!

If this is not enough for your taste, there's more:

If you add Steinberg's Avalon 3 sample-editing software, you can convert audio from any format to AIFF and vice versa, plus you have one of the most (if not the most) comprehensive sample-editing and -creating -program available.

If you add Steinberg's Audio Spector software, you have a DSP-based audio analysing and mastering tool.

If you add FA-8 output expander, (it connects to Falcons DSP-port), you have 8 more outputs for the audio, and Falcons own stereo-outputs can be used as effects returns.

If you add SMPII-interface rack, you have a total SMPTE -synchronizer and 4 midi outs + 2 midi in's more.

If you add Studio/Cue Trax -modules to Cubase (Cubase is a modular program) you have an intelligent Midi Librarian and Graphical tempo editor/calculator for film industry. Cubase has plenty of modules for every situation.

I'm aware that some professionals are wondering is Falcon really suitable for professional work, it looks like an Amiga, has mini-RCA connectors and only one card slot.
Despite of the looks, the Cubase Audio system works perfectly well with it, and if those kind of things really disturb you, you could change mini-RCA:s to real RCA:s (with FDI they are not in use anyway...), put it in a tower case (there are custom tower-cases available with a good separate keyboard), and get a good 17" multisync monitor on your desk. After that, when seeing the system in action, it has the feel and power of a system ten times more expensive.

And the main argument is: it works!

Hope you have something to tell that ignorant dealer the next time you encounter him.

You are welcome anytime to visit me and see this system in heavy
action if you ever happened to visit Finland.

Nope, I try to stay away from the suits (their trails mess up the carpet in
my office). However, it occurs to me that you have the ultimate way of
demoing the stuff. Grab a GEMulator, and set up a PC that has Neo running
in a window that fills the screen. Plop it down in front of your average
Windows user (running Windows, incredibly slow MSDOS prompt window on
top, rarely leaves it), and say "Gee, wouldn't this be nice?". You could
even create several hundred fake .INI files in the ST partition being
displayed, just to soften the shock :-).

Hell, make a video tape and send it to Novell or IBM. Given that any of
their staff could recognize a good GUI, they might be interested in funding
you. Either of them would love to have a replacement file/program manager
with something other than Microsoft plastered over it become popular in the
market. You might even try to tap into the "Human Interface" grant money
that seems to be floating around. See if you can find a college Computer
Science department that would like to do some man-machine interface work.

Pipe dream perhaps, but you might get lucky. One never knows...

Alt key at boot-up = boot from floppy

Control key at boot-up = boot from hard disk w/out AUTO
prg's or .ACC's (boots in ST Low with A/B/C/Trash desktop)

The control key is my new favorite key. (You can play civilization that
way using backwards 2.52 and the disks).

pF> help in my final decision...

pF> - Is the falcon's audio input MONO?

No it is stereo mini-jacks.

pF> - What is the Impedence of the audio ports?

Input is intended for microphones, so if you want to do line-level stuff, you
have to add 2 200k resistors (one for each channel), and also add a 1 uF
condensator in order to remove the 9V "phantom power".

The output is for headphones, so this should work fine as output - just
don't try it with the volume turned way up...

pF> - What do I plug into the DSP port?

Lots of things. F.eks digital interfaces, so you can record DAT's/CD's
digitally. Or better AD/DA interfaces.

pF> - How many Tracks can I hear at once with CUBASE AUDIO?

16 Tracks whith the new 2.0 version (which I have here :-)
You can record in 44.1 (CD), 48 (DAT), 33.88, 24.585, 20.770 or 16.490 kHz
All sampling rates can record upto 16 tracks.

pF> - Do I really need to buy a $3000 DSP/ SCSI processor to do
pF> professional quality recording with a FALCON ?

No, but you could do with better AD/DA interfaces. However they don't cost that much, round $300 I would think - but you would have to look into the prices in where you are. Normally though, this stuff is cheaper where you are than in Norway.

If I am not quite mistaken, the Yamaha DSP/SCSI thingy uses the same DSP processor that is built into the falcon, so that would be a waste of money.

pF> - Is the 68030 processor dast enough to handle 16 bit stereo
pF> Playback and Stereo Recording ?

The 68030 does not do anything about the sound Playback/Recording - it just tells the specialized Hardware to start playing or recording. And gets a message back when the playing/recording is done... In the meantime the 68030 is free to do other stuff - So don't worry about that.

The DSP in the Falcon is able to add digital effects to your recordings. With version 2.0 of Cubase comes 4 effects:
- 10 Band Stereo Graphic Equalizer
- an EQ mixer with EQ separate for all channels
- A Digital Reverb mixer
- A Chorus
Only one of these may be used in realtime, but you are able to "burn in" the selected effect on a track. Thus there is nothing stopping you from using the EQ while recording, then later adding Chorus and Reverb.

Also, if you are operating in 16 track mode, the DSP is used for compressing the audio. So no effects there.

pF> I know many Atari users swear by the viability of the computer as

>
>Sam

Wrong! No extra hardware (except a SCSI-drive) is needed to 16 track work!
Built-in connectors can be replaced with 20$ to RCA:s, and if you
really want extreme quality, you could connect Steinbergs
FDI-interface to the DSP-port, and use any external
DA/AD-converters. But FDI is not needed for 16 track work!

Get some real knowledge before talking about the subject! ;-)

This is hard to duplicate, but we can see where that could happen. We
will probably but some code into the next minor revision (via patch) that
takes care of this.

> In the "Program Information File" "Parameters" dialog, the last line of text

We don't see that here. Does it only happen some times?

> Saving preferences does not save the current file-sorting mode in windows.

Yep, that's an oversight. We'll take care of it in the next patch.

> If a group-window is open & preferences are saved, then re-booting will

Yep, actually a side-effect of the previous problem.

This is a little confusing. So far we haven't been able to reproduce it.
Can you explain it a little better or send us a uuenconded picture?

> After formatting a disk the info' dialog usually appears, but if after

If I understand was you are saying, this is the way NeoDesk 4 works. Some dialogs cannot have multiple incarnations of themselves (this is one of them). So, if you do not close the first "disk info" dialog, the second one can never appear.

Source record: 180935

OK, here's the situation. My Dad has an Atari 1040ST. I recently got an external modem for it and hooked my folks up to the internet. Small problem: The only communication software he has is the vt52 emulator that comes on the TOS disk. Being limited to a vt52 has its problems in a vt100/vt102 world.... not to mention a slew of neat features like backscrolling, logging, text editing, etc that it'd be nice to be able to do while on-line. I'm an IBM-clone user, and what I really want to find for them is basically a version of Telemate for the Atari ST. Or something similar, but that's the feature set I'm interested in. To further complicate things, if there's a way to do file transfers with the vt52 emulator I wasn't able to figure it out while I was there. So we can't simply FTP comm package after comm package until they find one they like. Does anyone have any suggestions/recommendations of software they should try? (Dumb question) And/or how they should get it? And/or is there a way to download through the vt52 emulator, perhaps using Kermit?

Please e-mail me at leininger@vaxino.scri.fsu.edu, or my father (Wayne) directly at waynlein@hk.super.net; keep in mind he won't have much of an idea what you're talking about as he's rather new to this stuff. Thank you.

Would you care to explain how either of these features can be achieved
without the use of an MMU? ;-)

Granted, you don't need *much* of an MMU to do protected memory, the ST
has basic protected memory for starters, but for the real world definition,
you need something a bit better.

As for VM AFAICS it is just impossible without an MMU. If a CPU can do it
without an external MMU chip, then it effectively has one built in. If it
can't then, there *must* be an external MMU chip!

The 68000 definitly can't do it without some clever external circuitry,
and a bodged O/S. Apparently the SUN 1 was done like this. For the ST, the
only real hope is a 68030.

:-)

Roland.

>one does not run programs that will stomp all over someone else's memory (in
>other words, all programs must request memory via the proper system call,
>which will work in conjunction with the memory manager) there is no reason
>why one could not implement virtual memory on any type of processor, period.

Just because programs ask the OS nicely for memory doesn't allow you to
do VM. It *does* give the impression of protected memory, as long as the
none of the programs crash and start stomping over other programs address
space.

>An MMU allows an architecture to implement virtual memory in a protected
>way, so that a rogue program absolutely cannot overrun or modify space

VM and protected memory are 2 seperate issues. Sure VM almost always has
protected memory, it tends to be a freebie. However you can implement
protected memory and *still* not be able to do VM. The ST for example has
protected memory, but only to stop the user programs writing over system
data. No help protecting programs from each other though.

>One sterling example is MINIX. It implements virtual memory on 8086

It doesn't! All it does it implement *swapping*, and only with the limit
of 64K data and 64K text space. Because Intel processors can work in 64K
pages, each of which are independently addressed, it is possible to have
more programs running than real pages. Programs which are blocked just get
wound out to disk. When they become unblocked they are wound back into free
memory. The great think about this is that is doesn't have to be the *same*
page.

>processors, and I presume the ST version does the same with the 68000 as well

Well you presume wrong! ;-)

ST-MINIX works just like TOS, where the program is patched up on loading.
Once it has started executing it *cannot* be moved unless is moved back
to its original possition before executing recomences. Sure it would be
possible to do a version of ST-MINIX where blocked programs were wound out
to disk. However as they needed to be loaded back into the same address
location, the chances are that *another* program would have to be wound
out of memory to allow the first back in. This just leads to major disk
thrashing.

Even children processes need to run at the *same* address as the parent
program. If a program does a fork() but not an exec() then ST-MINIX is
forever swapping the processes back and forth in memory so that the right
one is at the right address when it comes to execute.

It looks just about possible to repatch the address offsets into a program to allow it to be moved after executing. However the problem with this is that it is impossible to patch address in the program's data segment, as there is no record of where they are kept.

What it all comes down to is the 8086 can work with with relative adresses in hardware, whereas the 68000 can't. Of couse when you get to the 80386 and 68030, they problem goes away as both can do *real* VM no problem.

:-)

Roland.

Hank, If you have Internet access and an IBM-clone with a 3.5 disk drive
you can download comm. programs and put them on 720K 3.5 disk and the
Atari 1040ST will read them fine.

IMHO, STORM is one of the best term programs for the Atari line.
CONNECT's is also very good.

Both should be available in the pub/atari areas of the following sites:

wuarchive.wustl.edu
nic.switch.ch
atari.archive.umich.edu

Good luck.

3512. 16-meg upgrade for Falc

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 01:54:45 UTC
From: sccoe@ucscb.UCSC.EDU
Message-ID: <34of95$7q4@darkstar.UCSC.EDU>
Source record: 180852

I'm about to delve into upgrading my Falc030. Tommorrow I plan to order the RAM Gizmo board and four 4-meg SIMMS. So...just checking one last time for any warnings, "don'ts and do's", and if anyone can give me a better deal than $150 per 4-megs.

Also, anyone interested in buying my leftover 4 megs (in 1 meg-simms)?

3513. 1STGUIDE..

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 02:21:02 UTC
From: sheppard_r@ix.wcc.govt.nz
Message-ID: <34ogqe$4b2@golem.wcc.govt.nz>
Source record: 180945
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Some one e-mailed me and suguested that I should be using 1STGUIDE
and not GUCK as it was far better...

1. I don't use a TT or a Falcon, so how can it be better..

2. Doc's are very German and very hard to understand..??

3. It has none of the features that GUCK has, scroll with the mouse,
find a text string, display IMG pics, Signum fonts....

So I can't see 1STGUILD being better than GUCK, also 1STGUIDE is a ACC
and takes up memory, GUCK does not do that....

So how come some one can claim that 1STGUIDE is better than GUCK
and a standard ST/STE/MEGA running TOS or Neodesk..??

Misc Atari ST stuff for sale. Everything's in good working condition,
except as noted.

Mega 4 ST, TOS 1.4
520 ST, 2.5Meg
20 meg Supra drive, works, but takes a while to warm up
220 meg hard drive, ICD host adapter, 80MB quantum, 140MB Maxtor
2 SC1224 color monitors.
2 Panasonic KXP1080 printers.

Best offer takes it away, no offer means it gets scrapped.

Please reply via email, as I don't watch this group.

JRD@harlequin.com

Can I get an honest opinion out of everyone? I have been thinking about picking up another PC to do Hard Disk recording on. I'm using my 1040STe to run Breakthru and want to record direct to disk. Should I even consider a Falcon (h/w and s/w is very hard to come by)? Is there any s/w available for IBM that will do direct to disk recording? The boneheads I ask at CompUSA don't understand what I mean when I ask that... They say, "Sure you can record to disk! Just record your sound, then save it to a floppy or hard drive." Hello, is anyone in there?

Is anyone using the Breakthru sequncer? I think it's great because you can play your samples in time with the MIDI data.

From: dburns@world.std.com
Message-ID: <CvuM7x.wC@world.std.com>
Source record: 180858

Hi Rick. Got NeoDesk4 Tuesday and it's great. I love the Groups. It and Geneva make my system sweet to use.

One apparent problem: When I write a desktop note with a Speedo font, andything I type after a space character doesn't show on the screen. I tried it with several fonts and I can type an unbroken string of chars, but as soon as I use the spacebar the folloing chars don't print. This doesn't occur with the system font.

I'm using Geneva Release 003 (12/31/93) and Speedo GDOS 4.1.

While I've got you, can you tell me why STalker downloads tend to get checksum errors and time outs whenever I try to multi-task? I'm using HSMOD04, which gives better results than SERFIX2. Anyone else have this problem? Actually, it occurs whenever STalker's window is not on top, not only when I switch to another program.

Thanks!

I've noticed lately HEAPS of Falcon demos appearing on sites (ftp.uni-kl.de seems to be central for these). Why aren't the authors writing something _useful_ with these skills that produce amazing but nothing-new-it's-all-been-done-in-the-last-demo-I-saw demos!? Why not write games instead so you can amaze people in a similar fashion, but maybe be able to collect a shareware fee for your troubles & give people something to entertain themselves with!? (Admittedly, abusive language doesn't go down too well in software and there's an awful lot of it in demos I've seen so far....)

So, if there's any demo writers out there, how about writing some more beneficial to all!?

It's a shame to waste such a good machine on just pretty sound & colors, some decent interactive entertainment goes down much better no doubt!

3521. dvi previewer capable of displaying postscript fonts on atari ST

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 09:42:32 UTC
From: janssen@ph.tn.tudelft.nl
Message-ID: <janssen.779103752@galaxy.ph.tn.tudelft.nl>
Source record: 180896
Cross-posted to: comp.sys.atari.st,comp.text.tex

Wanted: a dvi previewer for the atari 1040 ST (no harddisk) which also
previews using postscript fonts.

Context: I am using latex 2e and xdvi(k) on a UNIX machine. I am
using PSNFSS (\usepackage{times}) and, thus, postscript fonts.
I can preview the documents with xdvi with postscriptfonts
rendered with gsftopk at my work with no problems at all.
At home, I have a atari 1040 ST and a modem and I would
like to preview my documents on that atari.

Problem: I tried several dvi previewers for the atari. I've copied the
pk files of the fonts used to the correct directory at home. All previewers
work fine if the normal (cm) fonts are used. However, there is something
missing I think in the pk files of the postscriptfonts.
Maybe this is in the .vf files, but I don't know what to do with these
(i.e. where to put them on the atari).

Previewers tried:
* dvist 3.2 and dvist 3.3. They read the pk font data and find an error,
next they are aborted.
* dvi_210. According to the documentation, should work with virtual
fonts, but I got a weird address error (illegal instruction? ---
I'm not sure) and the program aborts.
* shdvi: did not work either;
* dviatari: same;
* showdvi: same;
* ascreen: same.

Does anyone know a correct dvi previewer, or knows what to do?

Thanks a lot,

Rik Janssen.

: >before the trap. The 68000 doesn't have that ability; the 68010 and all latter
: >680x0s have it.

: But how do you remap the physical memory with a 68010 in order to get memory
: placed at the logical address which caused the bus error? You need a PMMU
: for that because the 68010 can't remap memory pages.

Probably by doing it in software:
If you get a bus error, for example from executing move d0,(a0)
while a0 contained 0x20000000, the exception handler can find out
what physical address 0x2000000 corresponds to, and execute the
instruction again - but only if the state in which the exception
left the cpu is defined (as it should be in the 68010). Since the
instruction would have to be 'interpreted' in a way, this would
waste probably over 100 cycles for *every* virtual memory access,
i.e. it would be *very* slow - but feasible(?).

-nino

PS. I don't claim to know more than Uwe about 680x0 Processors or
virtual memory (after all he wrote OUTSIDE, the virtual memory
package for TOS), but the above seems to make sense. At least
for my present state of mind. :-)

|> what's the display you get in TT-high ? I thought to get a better resolution
|> out of the TT you really need a graphics card.

TT high resolution means 1280x960 monochrome (1 Bit) at 72 Hz (!).

This is a very useful mode for word processing and monochrome graphics programs, e.g. papyrus and X-Act Draw. Because of the minimal depth (1 Bit), it is very fast. And the high refresh rate on a monochrome monitor is probably the best solution for your eyes.

The main disadvantage of this mode is that it is put out as an ECL (digital) signal. I am aware of only three monitors in the market that are capable of displaying this signal:

ATARI TTM-195 (19", monochrome, ECL, fixed refresh rate)
ProScreen TT (19", monochrome, ECL, fixed refresh rate)
EIZO 6500 (21", monochrome + greyscales, ECL + analog, multisync)

A TT with a TTM-195 or ProScreen TT is a relatively cheap possibility for a monochrome "graphics workstation".

Hi,

1st Guide (Shareware) actually isn't a pure file viewer. 1st View (PD), which is a subset of it, is rather comparable with GUCK.

1st View does all of its output in GEM windows - this grants highest compatibility with MultiTOS, MagiC and all screen resolutions that one can imagine. So 1st View is very independent from the hardware/software environment.
This only becomes unimportant if you definately know that you are _never_ going to upgrade your computer (or OS) or purchase another one.

1st View is able to display text in a scrollable window in different font sizes, (X)IMG pictures, GEM Metafiles, .RSC files and a certain sound sampling format (I don't know it right now).

1st Guide does the same but also has Hypertext features built in and comes with a hypertext document which explains TOS (very useful for programmers). I have registered it as an application under Gemini and renamed it to .PRG instead of .ACC, as I use MagiC and can let it run in parallel. That way, it doesn't take up memory and displays automatically the contents of a file by a double click.

Have you already asked the author whether he is willing to translate 1st Guide/1st View and the documentation?

Bye,

Christoph

3527. virtual memory on Falcon

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 12:17:12 UTC
From: steve@snark.cs.city.ac.uk
Message-ID: <34pjo9$o0@bambam.cs.city.ac.uk>

What are VM managers like on the Falcon?

(1) Do they need a dedicated partition for swap space?
(2) Do they work on the internal IDE drive or is a SCSI required?
(2) How is DMA handled (ie pages being DMAed shouldn't be swapped)?
(3) Overheads (eg resident size of VM manager)
(4) Reliablity/Compatibility

In particular are there any VM products available that will enable g++ v2.5.8
to run on a 4Mb Falcon? (I want to compile ~10K lines of source, longest
file ~1.5K lines, preferably with -O2).

Does anyone know if the Falcon version of Mag!x (sp?) will have VM?

Steven

Dave,
STE_FIX.PRG is an AUTO folder program that fixes a bug in TOS 1.06. The bug causes the STE to always boot in low res, so with the fix you can boot in medium.

There's another archive floating around that replaces the DESKTOP.INF file called STEFIX_2.ARC. Apparantly the problem with TOS 1.06 is that it always writes a loHd|.i:Y

Hmmm. I use spaces all the time, and I haven't seen that. I'll look into it and see if I can find a way to reproduce it. Have you tried it on a clean system (with only Geneva/NeoDesk & Speedo, or without Geneva) and see if that makes a difference?

Two factors could be affecting you here. First of all, baud rate. If you are downloading at 9,600 baud or faster, the errors a probably partially caused by the fact that the computer can't simply keep up (yes, a faster processor would help). The second factor, and more likely, is the size of your serial buffer. STalker 3.02 sets the serial buffer to 8K, however, you might need a larger one. There's a utility in the STalker disk to do this. You might want to try increasing it to 15-20K and see what difference that makes. In addition, it would not hurt if you increased the STalker download buffer.

3531. Printer Driver for Notator Logic

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 13:29:55 UTC
From: az822@FreeNet.Carleton.CA
Message-ID: <Cvv6tv.tD@freenet.carleton.ca>
Source record: 180805

I have a Brother HL-6 Laser Printer and use mainly Notator Logic v.2.0, LDW Power, and Atari Works. My printer is fairly new to me, but one of the reasons I bought it was because it said it printed 6 pages of text per minute. I know that graphics will print much slower but it takes sometimes more than 5 minutes for one page of sheet music to appear. Logic doesn't use SpeedoGdos so I disable it when I want to print from Logic. The printer emulation it says it is compatible with is the HP laserjet IIP+. Is it really going to be this slow all the time? Can someone give me a suggestion on how to write my own printer driver for my Printer?

Logic has a few HP drivers but none are very fast. The other thing is that even when I print from Atari Works, it is very slow. The printer, however, is very fast when I double click on as ASCII doc to show on screen or print to my printer. Then it is very fast.
Does anyone have any ideas?

>always writes a loHd|.

As I was saying before my computer crashed:
...it always writes a low-resolution boot to the desktop.inf file. Perhaps
someone else can point out just where this is in DESKTOP.INF, so you can
alter it whenever you wish with an ASCII file editor. If you decide to
edit the desktop file, make sure your editor doesn't strip trailing spaces;
line #D (I think) has a lot of them to keep the first three lines at
something like 120 bytes (including EOL), and if you lose those, your whole
DESKTOP.INF file starts acting strange.

dG> is available at atari archive, but where is the rest? Please help...

Since you are located in Sweden, your best bet would probably be
ugle.unit.no (Norway). It should be in the pub/gnu directory.

.....

I WAS going to buy a FALCON/CUBASE AUDIO setup this week but changed my mind after seeing a post in which ATARI at a stockholders meeting stated that they would NOT develop any new FALCONs. But is licensing FALCON technology to C-LAB GmbH (Steinbergs biggest competitor in Germany).

This is very frustrating given the past history of Steinberg (I've been with them since PRO16 on CMD64, and have burned my fingers/wallet several times). Steinberg is probably going to forget about the FALCON and consentrate on the MAC og PC versions, and then what???

As for functions I think the FALCON is OK from what I've seen, and if the current version is enough for you then that's fine BUT I don't think there will be very many more versions of CUBASE AUDIO coming out on FALCON !!!
Too BAD.

3540. Games List V18

3543. HELP! Alternatives to multitasking?

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 16:05:35 UTC
From: mcwilliams@wmich.edu
Message-ID: <1994Sep9.120535.21254@wmichgw>
Source record: 180809

I work primarily with MIDI applications and quite often I'm working
in my sequencer and have the need to work on sounds via X-or (patch editor/
librarian). I also find myself in the situation while working on sounds in
X-or I'd like to hear how they sound in context with the song I'm working on.
The way I figure it, there are three possible solutions:

1) Multitasking - but I doubt a 1040st with TOS 1.0 can do this.
2) Somehow convert X-or into a desktop accessory - is this possible?
I could work in the sequencer than edit sounds when the need arises.
3) Get an accessory that plays standard MIDI files to use while working
in X-or.

I would love to hear suggestions from someone in the know. Please,
fill my mailbox...

Thanks,

Brian Mc

There's an AUTO folder program called The Accessory v1.4(?) (look for ACC.PRG,.ARC, etc.) that loads accessories from a folder called ACCS. If you can't find it, let me know and I can uuencode it and email it to you (no docs, though).

Dear friends

I apologise for the lack of programs uploaded to HENSA this week. This has been due to other work that I have had to do...and so had to spend hardly any time on the hensa machine.

I have been preparing for a presentation for earlier today, and also for one at a conference next week. As I will be there from mid-week onwards...I do not promise many new files next week either.

I apologise for this, and will be back with a vengeance once all this is over.

Till next time.....
Download and enjoy
Danny

ATARI NEWS OF THE DAY Updated 09/09/94 @ 1655

New software for the Atari TOS section

New packages are as follows; type "cd ~/micros/atari/tos/<x>/<code>" to get to where they are held. <code> is as below and <x> is the first letter of <code>. EG. For package "m100" you'd "cd ~/micros/atari/tos/m/m100".

Pfx Date Key Details
--- ---- --- -------
o104 09/08/94 ---- BOOTSIE Write your own bootcode on a floppy
o105 09/09/94 ---- N_PUBLIS 2.01 Easily change printers in Timeworks DTP2
o106 09/09/94 ---- MAUS-WINDOW 1.31 Top windows in GEM, X-Window style

Hard time switching languages all the time, Erling? :)

>digitally. Or better AD/DA interfaces.

Just thought I should add someting here - for those of you doing music stuff
to audio DAT's there's now a couple of apps out there making it possible to
back up your HD to audio DAT. There's DataDat from SoundPool and an other
one from Steinberg which I don't know the name of. They are quoting
~1GB on a 120min tape as the capacity. If you already have a digital
interface, the DataDAT software is cheap, DM 49,-!

I would pay good money for an ST emulator for the power mac as long as it was even half-way decent to be honest... There is no real reason not to emulate at least a TT though, or at the very least an ST with a 'video card'.

Strangely enough NeoDesk is one of the two things keeping me in the ST world
(The other is Calamus). One of the major reasons I would consider buying an ST
emulator for the PowerMac is simply to use NeoDesk in place of the bloody Mac
desktop. NeoDesk is IMHO far superior in many ways to any other desktop...

Unfortunately it looks more and more like it is the ST that is dead (no flames please, I love the ST as much as all of us!) However, we do not have to be blind to the future in our dedication to the ST. A PowerMac (especially the fast ones) are fast enough to emulate one hell of a fast and powerful Atari if anyone bothered to make one...

I don't *think* so, but another suggestion is to have a folder like you said,
with the accessories in, and use the "Chameleon" accessory to load/unload them whenever you need them. That way you can be flixible and save memory (and time when starting up the machine).
Hope that helps answer your question.

3553. Gemulator

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 20:03:46 UTC
From: HARRIS@SLACVM.SLAC.STANFORD.EDU
Message-ID: <94252.120346HARRIS@SLACVM.SLAC.STANFORD.EDU>
Source record: 180886

Is there a list available of hardware and software that are compatible
with the Gemulator?

3554. UNIX2DOS.prg- what is it???

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 20:27:05 UTC
From: hallvart@ifi.uio.no
Message-ID: <34qgep$14s@baugi.ifi.uio.no>
Source record: 180887

I have a program called "Unix2dos.prg", without docs.
I suspect it should convert end-of-line characters from UNIX to
DOS/TOS standards, but when I run it it just goes back to the desktop.

Does anyone have this program, and more importantly, does anyone have it
with the documentation?

Hallvard

] > In the "Program Information File" "Parameters" dialog, the last line of t
] > overflows the dialog.
]
] We don't see that here. Does it only happen some times?

All the time. The line says:

Example: arc x $1 $2

But is mostly obscured by one of the border lines of the dialog.

] > graphic that is unselectable etc. This is best seen with a lot of
] > icons on the screen. It can also do this on the normal desktop when ther
] > are 10+ icons all over the place.
]
] This is a little confusing. So far we haven't been able to reproduce it.
] Can you explain it a little better or send us a uuenconded picture?

Basically, if I've got a whole heap of icons in a group, and they are
in wierd places and i do a "Snap to grid" on them, then many of them don't
re-draw in their destinations properly. They _Do_ snap correctly, but
they don't always re-draw in their new slot properly, or undraw the icon
in the original position (when it wasn't snapped)

] If I understand was you are saying, this is the way NeoDesk 4 works. Some
] dialogs cannot have multiple incarnations of themselves (this is one of
] them). So, if you do not close the first "disk info" dialog, the second
] one can never appear.

I mean after you format a disk, you usually get the disk-info dialog where
you can enter a volume name. After clicking OK, the dialog goes away and
the format-disk dialog reappears. If I format another disk straight away
then the disk-info dialog doesn't appear again afterwards. (It was closed
the first time, but after the 2nd format, it didn't open up again to let
me enter the volume label & show me the info' for the newly formatted disk).

Try formatting 2 or more disks in sequence without closing the format-disk
dialog, but _do_ close the disk-info dialog after it appears the 1st time!
(After entering a volume name preferably!)

I will EMail the group file I have to you in it's un-snapped form, the
mess appears immediately after snapping!

3556. No browser, but perhaps a HTML-editor?

Newsgroup: comp.sys.atari.st
Date: 1994-09-09 21:26:29 UTC
From: marvi@Krille.Update.UU.SE
Message-ID: <34qjuj$jv8@Krille.Update.UU.SE>
Source record: 180889

This is not one of the hundreds of questions about "when will Mosaic land on the ST-scene".

I'm looking for an editor for the HTML-files. No fancy thing with gif's and jpg's -just plain text with anchors and styles (bold etc). It is so frustrating to insert all this codes manually (I did buy my ST to get works of that kind done, you know...).

Anyone heard of a program like that?

Bye,
/Markus

From what I understand. The first SUN machines were built on a design for a non proprietry board which was a freely available design spec, available from a number of different sources. I'm not sure of this but I think that these were the first hardware, deliberately designed for Unix. What later became Sun Microsystems was just one source of these machines. These boards were a 68010 based system, designed to run a variety of BSD Unix, (I don't know exactly which version) but therefore had to have some of the hallmarks of what Berkeley Unix needs i.e. support for demand paging and virtual memory. The Sun 2 machine was the first of the proprietry designs from Sun which built on their experience from these designs. It also required a rewritten kernal etc. which was the beginnings of SunOS.

Cheers,
John

3560. Continuous Spell Checker - Try Spelling Sentry!

Newsgroup: comp.sys.atari.st
Date: 1994-09-10 00:04:41 UTC
From: marco@sys6626.bison.mb.ca
Message-ID: <iaResc1w165w@sys6626.bison.mb.ca>
Source record: 180848

A great choice for a continuous spell checker is Spelling Sentry. Here is the Press Release:

```
================================================================
N E W P R O D U C T A N N O U N C E M E N T
================================================================

Release Date: 1 September 1992

Contact:
Wintertree Software Inc.
43 Rueter St.
Nepean, Ontario
Canada K2J 3Z9
Phone: (613) 825-6271

Wintertree Software Inc. is proud to announce the release of a
new product for Atari ST/TT computers: Spelling Sentry -- a desk
accessory that adds a spell-checking capability to virtually any
other GEM program.

Spelling Sentry can check spelling in various ways, as described
in the following paragraphs. It can also expand abbreviations.
Since Spelling Sentry is a desk accessory, it's instantly
accessible from your favorite word processor, text editor,
communications program, or DTP application.

A key feature of Spelling Sentry is its ability to detect
spelling errors in real time while you type using other programs,
such as word processors. If you type a word containing a spelling
error, Spelling Sentry sounds a tone and flashes the screen.
Then, with a single mouse-click, you can select the correct
spelling from one of the alternatives which Spelling Sentry
suggests. Spelling Sentry will automatically replace the
misspelled word with the correct one.

Spelling Sentry can also check ASCII files and word-processor
documents. Since Spelling Sentry runs as a desk accessory, you
can save a file from a text editor or word processor, then invoke
Spelling Sentry's check-file feature to look for spelling errors.
Spelling Sentry can correct misspelled words in the file
interactively. When it finds a misspelled word, Spelling Sentry
presents a set of alternative spellings. You can select the
correct spelling using the keyboard or mouse, and Spelling Sentry
will correct the word in the file. Spelling Sentry can even
correct subsequent occurrences of the misspelled word.
```

A feature of interest to many Atari users is Spelling Sentry's ability to check the contents of the clipboard. The clipboard is a mechanism used to pass information between GEM programs and desk accessories. To use Spelling Sentry's check-clipboard feature, you copy a block of text into the clipboard from your word processor or text editor. Next, click on Spelling Sentry's "Check Clipboard" button. Again, Spelling Sentry presents a dialog showing alternative spellings when it detects a misspelled word. Select the correct spelling from the list of alternatives shown in the dialog. Spelling Sentry corrects the word in the clipboard -- and optionally further occurrences of the error -- automatically. You can then paste the corrected text in the clipboard back into your word processor or text editor.

Many people can correctly spell most of the words they use, but still get stuck on the occasional word. With Spelling Sentry's check-word feature, you can check the spelling of a single word. Spelling Sentry will let you know if the word is spelled correctly. If not, it shows you a list of alternative spellings, from which you can pick the correct one.

Besides being a spelling checker, Spelling Sentry can also expand abbreviations while you type. For example, when you type your initials, Spelling Sentry can replace them with your full name. You can teach Spelling Sentry abbreviations for words and phrases you use frequently, such as your return address, telephone number, "boilerplate" text in business correspondence, and BBS aliases and commands. Programmers can define abbreviations for language constructs and function calls. Spelling Sentry's abbreviation feature also works when you check disk files and the clipboard.

Spelling Sentry can include parts of the date and time when it expands an abbreviation. The parts include:

* The year, with or without the century
* The month number (01 to 12) and name (January to December)
* The day of the month (01 to 31) and of the week (Sunday to Saturday)
* The hour in 12-hour (00 to 12) or 24-hour (00 to 23) form
* The minute and second
* "a.m." or "p.m."

Using this feature, you can easily create abbreviations which include the current date and time in any format you prefer:

Monday, May 11, 1992
05/11/92 10 o'clock p.m.
10:32 p.m.
Creation date: 11-May-92 22:32:15
92/05/11 (Monday)

Adding or changing abbreviations is easy with Spelling Sentry's GEM interface. Spelling Sentry uses a window-in-a-dialog approach, showing nine abbreviations at a time. You can scroll the window contents using a standard scroll bar. New abbreviations can be added by clicking on an "Add" button, and existing ones can be removed or changed by selecting them with the mouse. You can even open different abbreviation files, so you can have several sets of abbreviations for different purposes. For a spelling checker to be useful, it must have a large dictionary so it doesn't mistakenly report unknown words as misspelled. Spelling Sentry uses two dictionaries. The main dictionary contains over 100,000 words, including contractions, many proper names, and words spelled according to both American and British rules. The main dictionary is organized in segments that can be loaded from disk to memory as needed. This makes Spelling Sentry adaptable to the capabilities of your system. If your computer has a modest memory capacity, Spelling Sentry will keep most of its main dictionary on disk, loading segments as it needs them. If you have 380K of spare memory, Spelling Sentry will load the entire main dictionary into memory, either all at once or segment-by-segment, for maximum speed.

The user dictionary holds words you use that aren't in the main dictionary. Such words may include your last name, street names, city name, business's name, and so on. The user dictionary is accessed very quickly, and never needs indexing or reformatting. Words in the user dictionary can be edited using the same window-in-a-dialog approach used for updating abbreviations.

An important feature of any spelling checker is its ability to "guess" the correct spelling from a misspelled word. Spelling Sentry is outstanding in this area, matching the misspelled word against words in the dictionary using several sophisticated lexical rules. Spelling Sentry even orders its suggestions so the first word appearing in the list of suggestions is the one most likely to be the correct replacement.

Spelling Sentry was designed to work on the entire line of Atari ST-compatible computers, from the 520ST with 512K of memory to the TT030 with 4Mb+. The only special requirement for Spelling Sentry is a double-sided disk drive. Spelling Sentry runs in a GEM window, so you can park it on the screen where it's out of the way yet still accessible. Spelling Sentry remembers its window position, so you don't have to position it manually each time you reboot.

The 40-page illustrated user's guide that comes with Spelling Sentry was written with the user in mind. It contains patient, step-by-step instructions for installing, configuring, and using Spelling Sentry. In a departure from most user's manuals, which are organized by program functions such as menu entries or dialog boxes, the Spelling Sentry user's guide is organized by

procedure. If you want to know how to add a new abbreviation, just read the instructions in the section called "How to add your own abbreviations." If you want to know how to check the contents of the GEM clipboard, see the "How to check the clipboard" section. Each section heading is listed in the table of contents for fast access.

The Spelling Sentry package also includes an anagram solver and a word-guessing game based on "Hangman." The anagram solver determines which words can be derived from different arrangements of a string of letters, and is useful for solving jumble puzzles or anagrams. The anagram solver can also be used to create new anagrams. The hangman game sharpens your vocabulary as you try to guess the letters forming a word chosen at random from one of the 100,000 words in Spelling Sentry's dictionary.

Spelling Sentry is developed and published by Wintertree Software Inc. Wintertree Software was incorporated in January 1992. Prior to then, it was Phil Comeau Software. Wintertree Software also publishes GramSlam, a grammar checker, and Grammar Expert, a grammar reference. Both GramSlam and Grammar Expert are software products for Atari ST computers. The addition of Spelling Sentry to its product line makes Wintertree Software Inc. the leading publisher of tools for writers in the Atari computer marketplace. Wintertree Software also publishes WStyle, a grammar checker for MS-DOS.

Spelling Sentry's list price is $59.95 US. Spelling Sentry is available wherever Atari computer products are sold. It is also available directly from Wintertree Software Inc., at the address listed above.

Someone on the MINT-LIST has said that GCC and G++ only work if you have more that 4MB of real RAM, before adding VM. He had tried GCC and Outside on his 4MB Falcon, and it just fell over. People with more memory reported no problems.

I was considering buying a PAK3 to do exactly what you are doing. However as I couldn't find *anybody* who had VM, GCC, MiNT and *only* 4MB, I decided not to bother. I bought an 8MB TT instead! ;-)

3565. program to play sample at bootup wanted

Newsgroup: comp.sys.atari.st
Date: 1994-09-10 00:29:51 UTC
From: hallvart@ifi.uio.no
Message-ID: <34qulv$8pl@baugi.ifi.uio.no>
Source record: 180832

Is there a program that can make my STE play a sample (like a greeting message)
when I boot the machine?
I know there are programs that do that, but they replace the "ping" sound inside the
machine. I don't necessarily want the same (talking message) to replace the warning
"pling".

And is it possible to have another program play different samples depending on
what kind of a situation the machine was in (different kind of
errors messages= different kind of "beeps")

Hallvard

3566. program to be able to "read" disk directory as text

Newsgroup: comp.sys.atari.st
Date: 1994-09-10 00:32:35 UTC
From: hallvart@ifi.uio.no
Message-ID: <34qur3$8pq@baugi.ifi.uio.no>
Source record: 180833

Is there a program that can let me get the filenames in the GEM window(s) as text?

In the UNIX system we use at the uni. (with X-windows) we can use the mouse to trace anything, and paste it in any other widow too.

Sometimes I might want to have the disk directory as a part of the text file I'm making, so instead of typing it all by hand, could I get it into the editor some other way?

Hallvard

I have the printer connected to my 4 meg STE. As far as I have heared
there are no drivers for the printer, but you can operate it like a
regualr ink jet (300 dpi by 300 dpi). So far I'm very pleased with it and
await for a driver to take full advantage of it.

```
It is probably designed to be run from a command line shell. Try renaming
it unix2dos.ttp and give it an argument. There is a GEM utility called
PureASC on atari.archive.umich.edu that performs this conversion as well,
and is designed to work from the desktop.

From: dburns@world.std.com
Message-ID: <CvwC6w.4xp@world.std.com>
Source record: 180842

Thanks for your response re STE_FIX.

Does anybody know where I can find it? I tried umich (yes, I *did* get in), and Hensa. Or, can anyone tell me what bytes to alter in DESKTOP.INF? This would be fine; I could use the .INF with X-BOOT.

Thanks again!

> "pling".

Check out Superboot. It can do this and much much more. Also, there is
a program called "HALstart" with which HAL (of 2001 fame) declares that
all his circuits are functioning perfectly. I believe you can use it
with any sample (it just comes with the HAL one).

> And is it possible to have another program play different samples depending on
> what kind of a situation the machine was in (different kind of
> errors messages= different kind of "beeps")

Yes. Check out Digivec (plays samples in response to various system events),
Click (bind sounds to all your keys,this one is cool) and Beep (replace
the system beep with a sample). These are all on atari.archive.umich.edu.
Take a peek at our 0index file, as there are lots of other nifty sound
utilities.

Note that overloading your system with various interrupt driven thingies
can cause weird things to happen with serial communications. I had to
dump my beloved Click samples when I went to a 14400 modem. That was on an
8mHz ST. Hmmm, I should try them again, now that I have a MegaSTE....

One thing I found rather handy was to bind two different sounds to "." and ","
so I would notice when I made that particular typo (which I do a lot, for
some strange reason).

Hmm, I think this would be hard to do from the desktop, but you might be
able to do it from a file selector. It could stick the full pathname of
the file you click on into the clipboard (which your text editor would
have to support). Perhaps this could be added to Selectric (or other
third-party file selector)? This would be a neat feature.

3574. Software for sale/trade

Newsgroup: comp.sys.atari.st
Date: 1994-09-10 04:45:30 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <34rdla$rid@mailer.fsu.edu>
Source record: 180753
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

For sale or trade:

Below are a bunch of ST items I want to sell or trade. For buyers, highest reasonable offer gets the item, with preference going to those that buy more than one item. Shipping will be negotiated with the offer.

As for trades, let me know what you have and we may be able to work something out. I am looking for some games (Vroom, Armourgeddon, Prince of Persia, Flight of the Intruder, and many others), Stereotek 3D glasses, working Wico bat handle or Ergo joysticks, European ST magazines (ST Action and ST Review particularly) and probably lots of other stuff. Cash can make up for deficient trade material from either party. Shipping will be negotiated with the trade (though for trades, I often suggest that both parties eat the shipping). Don't be shy, send me some email and let me know what you have to trade.

All of the items below are original commercial products owned by me. Unless otherwise noted, all original boxes, manuals, and disks are included. I have cheats for some of the games, and will include them with the sale/trade.

Please reply via email.

****Application and Utility****

Tempus v1.x, excellent text editor, not as good as Tempus II, but no slouch either. Blazingly fast (hence its name), even on a box-stock 8mHz system. Designed for programming, great for general editing as well.

Neodesk Command Line Interpreter, v. 2.0, adds a command line interface to Neodesk with MSDOS/UNIX style commands. More commands can easily be added (the GNU versions of standard UNIX utilities, for example). This version is really more MSDOS-like than UNIX-like, but the new version 2.1 (to which this can be upgraded) is supposed to be more UNIX-like. There are a couple of neat things about this CLI. First, it pops up in a window on the desktop, so a CLI is only a mouse click (or keyboard macro) away. One can drop batch files onto the CLI icon to execute them, which can be quite handy. Finally, it is quite small, primarily because it reuses the routines in Neodesk to do standard file operations (i.e. when the CLI copies a file, it uses the code already in Neodesk to do it). Only works with Neodesk.

Wordup v3.x, Neocept, with the large thesaurus and large dictionary extra options, plus lots of Genie notes about bug fixes and work-arounds. This is an excellent WYSIWYG word processor, but it does have some bugs. The rights to the code were purchased by Atari (and some of the code used in Atari Works, or so I hear). It is not buggy enough

to be unusable, just irritating at times. This is the final version
that was released.

TurboJet, Neocept, fast GDOS print driver for HP Deskjet and Laserjet printers,
includes a bunch of 150 and 300dpi fonts. Claims to be 200-500%
faster than other HP drivers (for that time, I don't know if there
are faster ones out now).

Microsoft Write for ST, buggy WYSIWYG word processor, the only Microsoft
product ever made for the Atari that I know of, includes a full
copy of Atari GDOS. Can be run from floppies and a ramdisk (Jeez,
did I really do that? I must have been really patient back then :-).
I managed to produce a bunch of papers and letters with it using only
a floppy and color monitor, so it is useful.

Personal Pascal, ICD, I believe this is the final version of this compiler.
The only limitation with it that I know about is that one cannot
pass functions as arguments. Other than that, it is a complete
Pascal compiler environment. The lack of this feature will not
hamper most Pascal programmers, IMHO. Good docs on both Pascal and
the Atari programming environment (it's a big fat softcover book).

CAD 3-D v1.0, Antic, original disk accidently laundered (don't ask :-),
includes original docs plus backup floppy. This is not really for
architectural design (i.e. Dynacadd or Autocad), but to make nifty
3D animations for fun.

****GAMES (Arcade Action)****

Alien Syndrome, overhead view scrolling shoot'em up, lots of fun for two
simultaneous players. Plenty of fast and furious shooting.

Captain Fizz Meets the Blaster-Trons, Psygnosis, sort of like a Gauntlet II
in space, best with two simultaneous players (screen is split to give
each player their own view). Overhead view, destruction galore.

Xevious, Mindscape, port of the stand-up Arcade game Xevious, vertical
scrolling "fly over the landscape shooting and bombing everything"
game.

Ballistix, Psygnosis, Bizzare soccer style game, where one shoots at the
ball to move it around. Really good graphics, so-so gameplay.

Baal, Psygnosis, Excellent platform/adventure game (mostly arcade action).
Future setting, sideways scrolling, large sprites, good guns. This
is a pretty hard game, but lots of fun.

Enduro Racer and Crazy Cars, combo pack, no docs, Enduro Racer is a cross
country motorcycle racing game, Crazy Cars is a racing game. Both
are OK, though quite old.

Super Cycle, Epyx, no docs, oval track motorcycle racing.

Custodian, futuristic platform shoot'em up game, excellent graphics, fast scrolling, lots of weapons, etc.

Eliminator, strange driving/shoot'em up game, lots of different weapons and bad guys.

Frostbyte, Starsoft, side-view platform game, I would recommend it for a small child (in terms of its difficulty). A bit boring for us big children, IMHO.

President Elect 1988 edition, SSI, presidential election simulation, graphics are quite lame (mostly text, in fact), but I suppose a political process fan might like it. It does not appear to be particularly tied to the 1988 elections, and has data for US elections all the way back to 1960. Can apparently be used to predict elections as well.

****Adventures (Graphical Adventures, most with some arcade action)****

Questron II, SSI, RPG, very similar in look/feel to Ultima IV, in terms of graphics and gameplay. Medievil setting.

Bard's Tale, Electronic Arts, yet another RPG, very good. Graphically impressive for its time. Search through buildings, dungeons, and towns (Skara Brae) in 1st person 3-D graphics (small graphics window and restricted movement, but this was many years before anything like Doom was ever seen :-).

Mercenary: Escape from Targ and Second City, early 1st person 3D vector graphics adventures. Future setting.

Gold of the Realm, Magnetic Images, very similar in look/feel to Ultima III, in terms of graphics and gameplay. Medievil setting.

Breach, Omnitrend, classic RPG game, GEM interface mostly, future setting, control a bunch of Marines as they search and shoot stuff.

3576. Microdeal's Replay 16

Newsgroup: comp.sys.atari.st
Date: 1994-09-10 05:00:36 UTC
From: group1@access1.digex.net
Message-ID: <34rehk$1fs@access1.digex.net>
Source record: 180757

I've got a Microdeal Replay 16 sampling cartridge. It records samples and plays them back just fine through their software and also Breakthru. However when I try to sample using STOS sampling software, I get all kinds of noise (sounds like really loud interference).

Does anyone have any ideas on why this is and if I can fix this? I had read in ST Format (I think) that this should work.

There IS a way of keeping all your accessories in a folder, which the
computer sees at boot up time.....

The program is called ACCESSORY and is at v1.3 at hensa.

I use it myself.

get it from: micros.hensa.ac.uk

micros/atari/tos/n/n103/acc13.arc

There IS a program that allows you to put all your accs in a folder called
ACCS. It's called accessory and I think it is available at atari archive.
Unfortunately this doesn't work on my Falcon, but I know it works on a ST.

>GmbH (Steinbergs biggest competitor in Germany).

This is bad news, but it also could be good news for musicians - if _any_
company is continuing the developement of Falcon, the Steinberg is sure to
continue developing programs for it.

>This is very frustrating given the past history of Steinberg (I've been with
>them since PRO16 on CMD64, and have burned my fingers/wallet several times).
>Steinberg is probably going to forget about the FALCON and consentrate on the
>MAC og PC versions, and then what???

This thing (Cubase Audio 2.01 for Falcon) is working so well now, that it
will be a usable tool for 5-10 years or more. Why change to PC or Mac?
It's a same situation if you buy a stand-alone hard disk recorder, or an
ADAT, you get a tool that works, and if there will no developers for it
- who cares, after it's broken you get a new system.

>As for functions I think the FALCON is OK from what I've seen, and if the
>current version is enough for you then that's fine BUT I don't think there
>will be very many more versions of CUBASE AUDIO coming out on FALCON !!!
>Too BAD.

Calm down!
If you get Falcon now, and *if* after e.g. two years you see
that the developement fades out:

1. you have had an exellent machine in use for two years
2. you can still use it
3. You can change the Falcon-system to Mac-system by only changing the
computer itself - all the other peripherals: SCSI-disks, monitors, printers,
modems, mixers, Midistuff, DAT:s works with Mac (except FDI and FA-8 of
course), and you can change your Falcon version to Mac version by paying
a small exchange fee (at least now). Also Audio files, and Song files,
drummaps etc are compatible from platform to platform (one more reason
to get Cubase!):-)

I will be sorry if all the computers in the world will eventually reduce to
Mac:s and PC:s only. If i hadn't a Falcon, I might just by a SGI :-)

See above. OUTSIDE supports MiNT/MTOS/MinixFS so GCC should work.

>Does anyone know if the Falcon version of Mag!x (sp?) will have VM?

As far as I know this is not planned. BTW, OUTSIDE supports MagiC.

You need the current version 3.3 of OUTSIDE to work with GCC, at least if
you use MiNT and MinixFS. 4 MByte are enough, OUTSIDE works on all machines
with at least 2 MByte RAM and MC68030.

Hi,
[slip/ppp with ST & TOS 1.02]
>I asked my system administrator and apparently, ka9q won't do.
KA9Q only offers SLIP and is *SLOW*, try NOS (current version is 0.41)
instead. You can find it in the /pub/atari/ka9q directory of ftp.demon.co.uk.

The other option is to install a recent version of MiNT (0.95 won't do)
and MiNT-Net. Since all MiNT versions > 0.95 are distributed in source
form only, you'll need a working GCC installation and perhaps a more
recent TOS version (1.04 or better 2.06)

LC> not be set higher then 19200.

I use HS_mod in the autofolder. In binkley.cfg I use:

RSVEBoard
Baud 38400
HardCts

That's all to get 38400 with binkley, you need HSMod in that case, the RSVE board command is needed.

The BBS shouldn't care about the baudrate, at QuickBBS doesn't :-)

3591. Re: Neodesk4/Geneva

Newsgroup: comp.sys.atari.st
Date: 1994-09-10 15:08:55 UTC
From: mparrott@hebron.connected.com
Message-ID: <34si67$fh4@hebron.connected.com>
Source record: 180819

Just wanted to let you Gribnif folks know I've been pretty much loving the NeoDesk 4/Geneva combo... it's certainly breathed new life into my computing!

I do have a few comments/suggestions for NeoDesk 4, though, so here goes:

1. I'd really love the option to set default View as Text/Icon preferences for windows opened from different sources, much as the way a Group works now. If a Group is saved while displaying Icons, for instance, when next opened it will display Icons, even if the topmost window at the time of opening the Group was showing Text. I'd like to have all windows opened from a Drive Icon (for instance) to default to showing Text, even if my topmost window happens to be showing Icons. The default type should be user selectable, and the ability to bypass default Text/Icon preferences for types of devices should be provided. If, of course, such a feature is feasible.

2. If one has _not_ selected one of the "Confirm" options for file deletion and copies/moves, why have a dialog box pop up at all during such operations? I really wish the box didn't show up unless I _needed_ to do something, as it wastes time redrawing the screen for no good reason (unless, of course, there _is_ a good reason for it...:).

3. Any possibility of adding a feature that will automatically reset the system colors to what they were when NeoDesk booted, upon termination of any given program? Or is reloading the .INF file the only way to do this?

That's all I can think of for now... but thanks for any feedback/info you can provide!

Michael

P.S. Any idea when Stalker/Steno will be seeing upgrades?

3592. Stereo Sound with STOS?

Newsgroup: comp.sys.atari.st

>Even the old Sun 3/50 used 68020 processors.

If I remember correctly, though, there is a "coprocessor" PMMU chip for
the 68020. It is most likely that these 68020 machines had this chip in them.
The reason you need a PMMU is that if processes crash then the PMMU can
protect the memory of the other processes and the uncrashed processes
can go on working while the crashed process can be cleared out of memory.

So let's say you're running a strange version of unix on a 68000 chip.
You're running 3 programs. One crashes. Now, the 68000 can recover from
exceptions but if the crash caused an overrun into the memory space of
another program then that one gets screwed up. However, if you have a
PMMU on your processor, like a 68030 then if one program crashes and
that crash would normally cause it to try and mess around with memory
the PMMU protects the other two programs.

I suppose that you could hack unix to work on a non-memory protected system
but with these kinds of problems, who would want to.

I totally agree. The time has come to move forward and not to be held back
by ST-Medium. Sure programs should work in ST-Medium, but this should not
stand in the way. I think the window menus in Neodesk make perfect sense.
Gribnif could also look at abandoning the custom window gadgets and using
a toolbar instead. There will be a problem with implementing the split
window feature.

>drive partition, without rolling over, or seeing a larger partition.
>This leaves only room for about 3 minutes of 8 track hard disk
>recording! Can anyone verify this?

There is nothing about any limits in the manual, I think the maximum
size of a Partition is the limit, and of course it is different with
different HD-driver softwares. I use ICD PRO 6.5.5. which works fine
with extra-big partitions, but as I only have a 240 meg drive for
audio use (I do backups to DAT), I cannot test a recording of over
256 Mb file.

But even if you have small partitions, you can record long multitrack
song easily.
Here's an explanation of Cubase Audio's filesystem,
it works like this:

Cubase Audio, when you do multitrack work, can record
each "take" on *any* audio track to *any* SCSI partition! So if you
have a piece, which has audio on 8 tracks, and there are 45 takes
in the song, can have the audio scattered around the disk(s)
with no problem.

So, even _if_ you have a limit, which to my knowledge is not true,
you would be able to record an 8-track song with each track having
several 51 minute mono files (or 25,5 minute stereo), or in 16
track mode a 102 minute file for each take in the song.

Cubase Audio for Falcon 2.01 displays the real recording time for
each track according to destination partition, track mode and
sample rate.
You can preset a filename and destination for each track's
target file in advance, and if the file named e.g TAKE_1.AIF
the Cubase renames subsequent takes TAKE_2.AIF, TAKE_3.AIF etc.
The user can rename files also after recording, if he/she wishes
to.

Hope this gave you some new information!

>Also, can anyone tell me the Cubase mailing list address.

Raymond Ho (rayho@ix.netcom.com) wrote:
> Does anyone know if there is auto redial feature with Uniterm?

Yes. I believe you set a "retry" count from 0-99 tries (there is a bug when setting it to zero, I think, so at least one would be a good idea). This is all covered in the manual. Do you not have TeX capability? If not, I could probably produce a PostScript version of the manual and put it up for ftp. This is worth the effort, as the ASCII version of the manual is horrible, with no figures or proper index.

If you are talking about redialing a range of numbers, you can do it with a macro. Uniterm's macro language is quite flexible.

> Also does it
> have any support for Zmodem?

It has no internal support for Zmodem per say, but there are several external zmodem packages available that can be used with no problems. I personally used to use GemRZSZ 2.28 with Uniterm. I wrote a couple of macros that would allow me to start a Zmodem upload or download with one mouse click. You can ftp to ftp.math.fsu.edu and grab /pub/atari/rzsz_mac.lzh if you would like to see them. I don't claim to be a Uniterm macro whiz, so think of mine as a starting point :-). Grzsz228.lzh is also there, BTW.

Perhaps you could stop being so selfish and think for a minute.

It may be very convenient for you, with your free Internet access, but
some of us actually have to PAY. Downloading a lot of unwanted data
at 2400 baud really is no joke. It took me 25 minutes to download my news
today at long distance rates, so I can do without all the extra crap from
the likes of you.

Is it really worth inconveniencing thousands of other net users just
because /you/ want a few free fonts?

Either use the binaries groups, or upload to an ftp site. That way,
everyone's happy.

Sounds like your resource file is somehow messed up. I'll play with it
and see if I can come up with some way to re-create that. You might want
to try re-copying your resource file from the original disk and see if
that fixes things.

Hmmm. I'll play with this (including the file you sent me via e-mail) and
see what I can come up with. BTW, you might want to try the option in the
group's "snap" dialog to re-order the drawing order of the group icons.
That might have an effect on your problem.

Something we've discussed. Part of the problem is coming up with a clear
and logical "graphical" way to display this and allow the user to set it.
However, it is something we've considered and we have some ideas on how
to address it in the future.

There is. It is your method for pausing/cancelling/changing its backgorund
status/etc of an operation. Not all file copies/deletes/moves takes 2-3
seconds. Some can take minutes, hours, etc.

> 3. Any possibility of adding a feature that will automatically reset the

Currently yes. This is mostly because NeoDesk isn't necessarily the only
thing running (now that we are in the world of Multitasking). Sounds like
you are not running Geneva or MultiTOS. With a newer AES, this becomes a
little easier.

> P.S. Any idea when Stalker/Steno will be seeing upgrades?

Soon! First got to get the lack of the backorders out! ;-)

> window feature.

Much appreciate your support Ofir. However, if we removed the custom window gadgets, we would lose the functionality they add (duplicate window, cycle window, show info, delete, copy/move to prev. directory, split window, etc). An additional floating toolbar would involve an additional floating window and make it unclear on which window you want to work on.

What problems are you refering to the split-bar? We've used it since version 3 without any problems. It gives the user an excellent way to access two different parts of the same directory, without requiring a second window open. This method was first made popular in Microsoft Excel and Microsoft Word.

There is now EGEM 2.00 available at ftp.cs.tu-berlin.de in the /Newitems
directory. This version has complete (german) documentation and a revised
demonstration program. Also, from what I can tell, the check-boxes are
a little different. Also, the help display seems to have change quite
a bit.

>: what is the point of having the fonts???? They cant be used on any other
>: DTP program. I think Ofir Gal is just having a winge for the sake of it.

I also use the same net access system as Ofir (CiX) and pay the same
download charges.

Its not a question of whether the stuff is clearly marked as fonts or not,
it the fact the we all use Off Line Readers (to keep costs down), so
download *every* message. Most of the time its fine. I don't *mind* reading
about all the Atari subjects I have no interest in. I do mind however
downloading 100Ks worth of binary files that aren't any use to me.

If we didn't use OLRs we'd have to examine posts online, and that even
more expensive!

Roland.

It also runs on my 4 meg Falcon, so no (big..) problem! I wonder whether it might be the same problem as with one recent demo; the program has to be started from ST-low (or Falcon TC) resolution; not from the 640x480x16 desktop.

bR> third-party file selector)? This would be a neat feature.

With MultiTOS and a DragAndDrop-aware texteditor, you could just drag the
file icons from the desktopwindow into the texteditor. Like I will do in a
second (from c:\multitos into emacs running in a MiniWin window:)

C:\MULTITOS\GEM.BAK
C:\MULTITOS\ISOFS.CFG
C:\MULTITOS\TAPEDEV.CFG
C:\MULTITOS\GEM.CNF
C:\MULTITOS\MINT.CNF
C:\MULTITOS\INIT.PRG
C:\MULTITOS\SCSI.XDD
C:\MULTITOS\TAPEDEV.XDD
C:\MULTITOS\ACSI.XDZ
C:\MULTITOS\CDDEV.XDZ
C:\MULTITOS\SOCKDEV.XDZ
C:\MULTITOS\ISOFS.XFS
C:\MULTITOS\MINIX.XFS
C:\MULTITOS\RAMFS.XFS
C:\MULTITOS\NFS.XFZ
C:\MULTITOS\SLIP.XIF

Hrmph, one thing though is that the filenames are separated with space, so I did a query-replace from [space] to [cntrl]-q-[cntrl]-j

Other cool programs like connect let you upload a bunch of files in the same way, just drag them from a desktop-window into the connect-window and the upload starts... :-)

gR>
gR> Brian Barton

With multitos, you can put your desk-accessories into any folder on any
drive. You just set the ACCPATH environment variable in gem.cnf to the
folder where your desk-accessories are located. BUT, if you have any
desk-accessories enabled on the root of your boot-drive, only these will be
loaded, and not the ones in ACCPATH.

Put the line:
setenv ACCPATH=E:\SYSTEM\ACC\
into gem.cnf and move all your desk-accessories there.

I am selling my Falcon030. It is a stock 4/85 system.
I am also throwing in all my software, a .39 dot pitch
14" VGA monitor and Canon BJ-5 printer. I have quite a
bit of software including games, graphics and utilities
and all are bought (no pirated stuff).
There is one problem with the Falcon that I must mention:
the microphone port does not work. However, the warranty is
still good (until March of next year) so it can be fixed by
sending it to Atari for free.
I am asking $1300 (this does include monitor, software and
ink jet printer remember). If interested, please e-mail me.

Sorry I don't have an answer for your question, but I'd like to ask you
one. Are you using the STOS sampling cartridge or another brand? I'm
using a Microdeal Replay 16 and can't record anything with it using the
STOS software (creates a lot of noise in the sample).

Got any suggestions?

: Thanks...

Yes, and yes and no.

As Mickey sez, there's no built-in Zmodem support. I use xyz.ttp with
no problem. Funny thing is, Uniterm's internal Ymodem protocol is
compatible with the implementation of 'sz' on my host, so most of the
time I just use that.

From: boyd@gauss.math.fsu.edu
Message-ID: <34tt3e$b35@mailer.fsu.edu>
Source record: 180774

Could someone please confirm that The Chaos Engine (great game from the Bitmap Brothers) works on a MegaSTE? I bought a used copy, and it does not boot at all on my MegaSTE. It boots on my Mega2, but is somewhat flaky about loading files from the second disk. The manual states that it will work on MegaSTEs, but the failure looks rather suspicious (the bootsector fails to execute, so the memory test pops up and the desktop appears). Does anyone know of an email address for a representative of Renegade Software or the Bitmap Brothers? Can anyone confirm that these companies still exist?

I guess I'll be sending my disks off to England for new copies :-(. The demo version of this game (on atari.archive.umich.edu) works just fine on my MegaSTE. If the commercial version doesn't boot due to copy protection, I get to hunt for a cracked copy.....

Thanks in advance for any assistance.

3624. MTOS & development env. problems: Help!

Newsgroup: comp.sys.atari.st
Date: 1994-09-11 07:27:11 UTC
From: dud@u.washington.edu
Message-ID: <34ubgf$m2s@news.u.washington.edu>
Source record: 180778

One of the main reasons I've put off learning to program in C is lack of a comfortable development environment on my computer (I know, lame excuse...) I have a TT030/8, 500 megs of HD, Nova 16M VME, 17" multisync, and I usually use 1280x1024x16 for most productive stuff.

Adequate hardware, I think... :)

Over the past year or so since I've been trying to get through C-Manship Complete, I've been peicing together various software that will hopefully yield a nice development environment. I have a much-messed-with MiNT-distribution-kit-installed set of all the MiNT/MINIX FS/TCSH stuff, and have MultiTOS with MiNT 1.09. I also have Geneva and NeoDesk 3 (soon to be NeoDesk 4). My ultimate goal is to use MiNT under Geneva (so as to combine the Unix-like kernel, Minix filesystem, and pre-emptive multitasking of MiNT with the faster, more versatile & configurable AES of Geneva) and use a desktop that supports the long Minix filenames & symbolic links, etc., of such a system.

Looks like it'll be a little while before Geneva is combatable with MiNT and NeoDesk 4 supports long filenames, so I'll have to wait for my ideal system.

What I'm doing in the meantime is trying to use MultiTOS, with Everest as the text editor (just downloaded it today; great program!), and TCSH running in a Miniwin window. It is bearable (to say the least); I compiled hello.c great this way (whoopee).

This is the stage I'm at now. 2 questions:

1) Does anyone know why TCSH spontaneously locks up the system in the middle of typing a command, usually no more than 20 commands into a session? For example, I've typed up the source to hello.c in Everest, saved it to hello.c in my home directory, and am ready to compile it. I type "cc hel" and suddenly the whole system is locked; no bombs, no error messages, the keyklick still works, but the mouse disappears. Rather annoying. I reboot, compile hello.c successfully, run it, type a few more commands, and it does the exact same thing again. Has anyone else had this problem? It happens whether or not Everest is running; I've tried several combinations of auto programs/accessories, messing with the mint.cnf and tcsh.rc files, etc., to no avail.

2) Does anyone else out there have a similar system to mine? Do you use it for development? If so, what is your preferred development environment? I finally want to get off my duff and do something productive (I got a zillion ideas), but I'd really honestly get a lot more done if I had an environment that worked all the time.

Thanks for any response!

Dan Aylward

Oh? Standard the max is 19200 with Xbios 15 (Rsconf). Speed 0 is 19200.

If you want more then you should install HS_MOD in the autofolder. It will reroute baudrates, say setting to 134 baud will give 38400 etc. Just see the docs for HS_MOD.

Hi, what is the status of the STARBALL upgrade,
I thought this had been sorted out ages ago,
but thing have seen to have gone to sleep...!!!

Does any one know....??

I can never get online there to get files. Is there anywhere which has a complete
MiNT/MiNTNet setup for me to Freq/FTP. Size doesn't matter (oo-er).

ATB,
Karl.

> Just wondering if anyone could recommend a decent notepad accessory >(PD of course)...

Brian,
There's one called "Notepad" c1.3 by Michael Zuhl. It only allows you to type in one page (about 40 characters by 24), but you can load and save notes, as well as print them out. If you can't find it, I could uuencode the German accessory for you and email it.

On a slightly different note, I translated it for my own use into English. Does anyone know if it would be at all legal to post the English version (with Zuhl's credits, not mine :-) to the archives? If not, would anyone happen to have an email address that he can be reached at?

Tom

3633. NOEDESK 4 to Slow to Load...

Newsgroup: comp.sys.atari.st
Date: 1994-09-11 13:07:42 UTC
From: sheppard_r@ix.wcc.govt.nz
Message-ID: <34uveu$fcc@golem.wcc.govt.nz>
Source record: 180789

Please Please can the Info screen be removed
from the NEODESK 4 when booting...??

Also the speed of loading is far to slow, it looks like
I will be going back to using NEODESK III, to me its far to messy,
far to cluttered...

I can't use my nice collection on NEODESK III Icons, there should have been
a way to convert from NEODESK III to IV, the suplied program did nothing
for my Icons...??

Why not do the menus like the way the Germans do it, where a menu item links
to another normaly hidden menu to the right, ? then there would be no need
for those small windows, then all the options can be fitted on the one menu
bar...

How do I display directory items in text when using the Icon editor...??

The copy/move buttons are far to small, also cluttered with other options,
may be these should be hidden, similar to the way Germans do it......??

To me there are far to many options, and getting far to cluttered, it looks
like you have tried to fit the Kitchen sink in it, it needs tidying up,
may be with hidden options/menus..

Please note, this was after 1 hour of use, and are just my opinions, there
could have been mistakes in the way I am using it, or even seeing it...

But I do like the ways the German programers fit some of there options/menus
in there programs....

Can some one arange for all those NEODESK 4 Icon files that are now on GEnie
to be available on the net...??

Yes you need the ACC13.PRG, I have not seen this later version on the net,
but it lets you have all your ACC in a ACC folder only on Drice 'C'...

There are problem with the lower versions so stick to 1.3....

3637. Falcon HD access errors

Newsgroup: comp.sys.atari.st
Date: 1994-09-11 14:11:18 UTC
From: d8klojo@dtek.chalmers.se
Message-ID: <34v366$lck@nyheter.chalmers.se>
Source record: 180787

If anyone knows anything about the problems described below, please let me know!

1. Speed test problem (not really important)

I finally got myself an external SCSI-II disk for my Falcon two days ago. The disk is a very nice Conner CFA540S (540 Mb) unit.

To try out the speed of the drive I first used ratehd v3.05. I got this version from some BBS, but the file date makes it look older than the v1.5 from atari.archive.
(The one on a.a gave me bus errors for no apparent reason.)
Ratehd gives very strange results for my new drive!

Internal Seagate ST9080A(IDE) around 800kb/s 23ms average access
External Conner CFA540S around 1Mb/s 42ms

The access times varies from 32 to 46ms depending on graphics mode!

Now, the transfer speed seemed low, but I thought it could be correct. The access times on the other hand were totally ridiculous.

I ran HowFast to get another opinion on the transfer speed. This reported writes at around 1.2Mb/s and reads at 1.8Mb/s.
I've verified that these results are about right using a program that writes and reads a 75Mb file.

What on earth is ratehd doing?
Are there any other transfer/access speed test programs available?

2. Erroneous reads (Help!!!)

When I was done with the speed tests I started using the drive for real. This was when the real problems started.... :-(

The reads get somewhat garbled from time to time!

If I read the same file a few times, a byte or two can be different. This causes no end of problems as can easily be imagined.

After a lot of testing it seems as if the problems occur more frequently the worse the graphics contention gets (I use BlowUP Hard II). As far as I can see there are no problems in the normal graphics modes, but they might just not have shown up yet.

There seems to be no way to predict when the errors will occur (but see below). The test program mentioned above can for example read the first 1Mb of the created test file and find 20 word errors (never clustered). Then, on an immediate re-read of the block, everything checks out fine.

I can't remember any time when I've had errors in the last 74Mb of the test file, which is _very_ strange.

I hope someone can explain what's going on!

From: bb894@FreeNet.Carleton.CA
Message-ID: <Cvz655.KBE@freenet.carleton.ca>
Source record: 180795

All you have to do to make your Atari to Mac graphics
conversion program work is to copy the files onto an IBM
formatted disk (you should be able to do this on your Mac
using Apple File Exchange or AccessPC)... IBM disks are fairly
compatible with the Atari...

MS>> reach 1700-1800 CPS and never any higher using Zmodem in both
MS>> cases. Users have tried both with xyz202b.ttp and gszrz installed at
MS>> the BBS end without any significant change in results.
TR> Have you tried the internal Z-Modem in QuickBBS?

GEM SzRz is very fast, i use v4.1 (registered) and communication
on 57600 baud between PC / Falcon goes on a rate like 5000 cps.

XYZ is slow, but this programm is much older and no new versions
are currently released yet.

TR> You might get the full 3700 Cps but 1800 is very low indeed.

Maybe a mistake in the baudrate? Then you don't get higher
speeds like 1800 cps.

3640. sendmail for MiNTnet?

Newsgroup: comp.sys.atari.st
Date: 1994-09-11 18:47:12 UTC
From: robotron@moroder.demon.co.uk
Message-ID: <199409111941.AA00859@moroder.demon.co.uk>
Source record: 180798

Is there a version of sendmail available for MiNTnet, or even anything which talks SMTP? The default inetd.conf file has a commented-out line pointing to /usr/lib/umail, but that wasn't in the archive (possibly why the line was commented out (:).

Stephen

3641. Specifying serial port using KA9Q Slip

Newsgroup: comp.sys.atari.st
Date: 1994-09-11 19:30:05 UTC
From: cfuhrman@csugrad.cs.vt.edu
Message-ID: <34vlrt$7mf@csugrad.cs.vt.edu>
Source record: 180701

Hi!

I'm trying to slip my Mega STe to my roommate's Linux machine.
We've managed to clear all the syntactical mistakes from the autoexec.net
file, but where we're having problems trying to tell the KA9Q software
which serial port I want.

This is what in the file now...

attach asy AUX: 2 slip sl0 4096 576 9600

What we wish to do is do the serial connection either by the Modem
2 or MSTe Serial 2 port (modem 1 doesn't work with STalker so I'm not
going to bother hacking around with it). I have loaded up all the
necessary patches to get TOS 2.5 to talk via the serial ports (otherwise
STalker wouldn't work period) and we've affirmed that his slip program is
working on his end and we're both talking at 9600 baud.

How do we configure the file so it talks through Modem 2 or Serial 2?
What is the specific syntax for each entry in that line?

Source record: 180702

] I can't use my nice collection on NEODESK III Icons, there should have been
] a way to convert from NEODESK III to IV, the suplied program did nothing

Save your Neodesk 3 icons as a NIC file, and then open the NIC file from
both 4 & 3 in the editor, and then drag the Neo-3 icons into the Neo-4
icon window. Simple as that. (You can do the same thing for TOS 2+
DESKICON.RSC files)

] How do I display directory items in text when using the Icon editor...??

Why would you want to? How can you tell what the icons look like?
(Although, it is a bit wierd having the button there but it not doing
anything)

] Also the speed of loading is far to slow, it looks like
] I will be going back to using NEODESK III, to me its far to messy,
] far to cluttered...

It was mentioned earlier that this is due to the extremely heavy code
optimising & compression. You're lucky, they could have sent it out
un-optimised on more disks, so more hassle! :)

] Please Please can the Info screen be removed
] from the NEODESK 4 when booting...??

This does look pretty stupid, can it??

3643. Multiprocessor Unix or Linux on a Falcon030??

Newsgroup: comp.sys.atari.st

From: peseb@freeport.uwasa.fi
Message-ID: <34vnj1$4lm@zippo.uwasa.fi>
Source record: 180703

Humblest greetings to ye Unix&atari Gurus of comp.sys.atari.st!

Would it be in anyway possible (feasible) to make (port)
a multiprocessor Unix or Linux for the Falcon030,
assuming one has an Upgrade car with another processor on it?
For example Barracuda040 or Afterburner040....
Or maybe even the material of Myths&legends and Songs,
the rumored 68060 board for the Falcon, is it coming? Is just
a wet dream?
However, As I understand all of these upgrade cards simply
turn off the 030 when they're running. (What a horrid waste!)
And couldn't the DSP and MFP 68901 be used aswell ?
(For some functions..)
What the hell does the MFP 68901 do anyways?

Hail ye gurus.
-Peter.

PS. POV using DSP would be fun aswell , as I understand the DSP can
do Integer operations and converting a float-operation to an
integer-operation is possible. no? Opinions!

I have heard that one can use Sun3 19" mono monitors with the TT, via a
special cable. Can anyone confirm this? If so, there are plenty of places
to pick these up used (for quite cheap, though the shipping is a bitch).

I think it would be best if you put your version, plus the original (still
in compressed format, if you like) plus an explanitory text into one
archive and upload it. There are a couple of other "Englishized" programs
done this way on a.a.u.e. Of course, if it were really big, this might be
the wrong approach....

You must use a file selector that supports the ability to select more than one file. The one mentioned in CoNnect's manual is Selectric, which is available from atari.archive.umich.edu and other places.

I was unwilling to give up my beloved Universal Item Selector, so I just upload stuff one at a time :-). There might be another option if you use GemRZSZ instead of CoNnect's internal Zmodem, as it can do batch file uploads (you would still have to get the filenames into a batch file, but this could probably be done quite easily with a CoNnect macro).

What kind of cable have you used for the SCSI ? If it's fairly long try a
shorter cable, maybe the drive doesn't have termination resistors fit or
parity is active (although this should give far more errors I think)
I'm not sure about BlowUp Hard II but if it changes the bus speed it could
cause trouble.

Yep - done that, but I still get loud clicks when selecting options in AUTO programs, as the XCONTROL hasn't loaded yet!

:-(

Roland.

From: azog@world.std.com
Message-ID: <CvzLso.JnE@world.std.com>
Source record: 180717

I just downloaded something from one of the a.a.u.e mirrors called D2M_DEMO, which looks like a really nice paint program. Unfortunately, its all in French. There is a short english readme file, but all it says is whats been upgraded from the last release...

There is no rereference to any netmail address either. Does anyone know who wrote this? And would it be possible that an english RSC file be created? I am not going to use it, nor will I even register it, if I cant understand it! Which is a shame, since it looks very nice...

Thanx

>-Kevin Fason - "Ice Blue Eyes"

I use Selectric (a file selector replacement) which allows you to
shift-click multiple files (as well as lots of other groovy things).
However, the calling application has to support it, which CoNnect does.
Selectric is shareware.

Hmm...

Maybe this isn't what you want, but I can spool 16-bit sound directly
to disk on my Linux machine. It's literally as simple as:

% cat /dev/audio > filename

Well, audio is an 8-bit device but you get the idea. You might not
want to use a UNIX system but it's got good sound support.

>Is anyone using the Breakthru sequncer? I think it's great because you
>can play your samples in time with the MIDI data.

If you mean with any kind of syncronization then I'd say no because I
don't currently know much about MIDI software for UNIX. I thinking
that the Khoros package (DSP/multimedia software) might do it but that
package is so huge I've not tried it (45megs for binaries).

HS_MOD does not increase line speed at all, it improves the TOS handlers
for the modems, and removes some bugs....!!!.

It does support a Hardware Mod, for higher speed, (RSVE) developed by the same
person of HSMODA04... ..

I thought there are other modem ports on the Falcon that can run at higher
speed....

3658. CWAC's 3.02 Info....

Newsgroup: comp.sys.atari.st
Date: 1994-09-12 01:23:14 UTC
From: sheppard_r@ix.wcc.govt.nz
Message-ID: <350ai2$o2v@golem.wcc.govt.nz>
Source record: 180709
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

As the CWAC's info file never got posted to A.A. here is some more info...

This is now on A.A. in the Archiver directory...

NOTES:

1.) Never use any LZH program above LZH201L for archiving, nasty changes were made in the way Base Page is set in Christians versions...

2.) Don't ever use the German port of ZOO 2.1...

What is CWAC?

CWAC, pronounced "quack", is Cool Wave Archive Converter. An automation package that assists your conversions of archives, or files into archives. This is all achieved with a simple GEM interface with interlaced help screens to guide you along the way. Conversions can be made from ARC, ARJ, LZH, ZIP, and ZOO, and converted to ARC, LZH, ZIP, or ZOO. You can also convert any groupings of files with a common extension. For example, if you want to take a bunch of *.TXT files and convert them to single archive files, CWAC will do it for you.

For Express or RATSoft owners, conversions also maintain your BBS system files. For Express, it will handle your description files, and for RATSoft, it will handle all of your file area data files. Selection of conferences and file sigs is done with a simple GEM interface. Just click on the areas you want to perform the conversions on and voila. You are also provided the option to enter conversion in standard mode in case you wish to have a path converted without the handling of data files.

CWAC will maintain the date/time stamp of the original archive file if you wish it to do so. This is a very helpful feature, especially for the SysOp of a bulletin board system. Why have all of the files that you convert showing up as new files when it is not necessary?

You can also have up to 5 files included with each converted file, and you can have up to 5 files eliminated from each converted file before it is packed back up. Imagine being able to take out the ads for BBS's that you are tired of seeing!

What follows is the on-going chart of updates and enhancements to CWAC. Only version 3.00 beta will receive public release.

Version 3.01 and above are only released to registered users of CWAC.

CWAC Updates:

Version 3.00beta (3.01)

Added procedure tracking for increased error control, should an error arise.

Added memory checks for users of STZIP 2.2. This program now requires over 512K to be executed, which can pose a problem for users of a 1 meg machine operating a BBS system. CWAC will now issue warnings during setup for low memory, and will indicate possible memory problems if an error occurs during a conversion involving STZIP.

Decreased the amount of memory CWAC uses by about 80K.

Added the option to have files added to or removed from archives during the conversion process.

Added searching, jumping, printing, and page deletion to the log viewer.

Increased overall logging of activities.

Completed handling of command line operation. It is complete, though not available.

Split the resource package in two to allow use of color and hatches in medium resolution, while still maintain readability in high resolution. If it weren't for Hursh, this would have taken longer. Grin.

Optimized the conversion code for the umpteenth time for speed and reduced duplication.

Have put on hold, indefinitely, the addition of optional conversion modules. This would entail more than I care to undertake unless this package becomes successful.

Incorporated digitized sounds.

Added color flow to the title screen.

Added Accessory Access for those requiring this feature.

****
NOTICE

All versions after 3.01 are not available for downloading. The only way to receive them is to register and have it mailed to you through US mail. Each registered version is customized to the person registering.

****

Version 3.02beta

Working date: 7/5/93

Registration amount remains at $10 US ($12 US if you do not supply the disk and self-addressed-stamped-envelope for return mailing of registered version)

Installed option to have date/time stamp of old archive maintained on converted archives. User selectable for each conversion entry.

Added conference/sig selection screens for Express and RATSoft.

Added option to have the log file trimmed in 5K increments from 10000-50000 bytes. This is the result of a user request (I'm sorry, but I forget who it was). You are shown when the trim occurs each time you adjust the log file length. If you have your log size set to 15000 bytes, the trim occurs at 17500 bytes. If you set to 20000 bytes, the trim occurs at 22500 bytes. As you can see, it is hard-wired to trim at 2500 bytes above the size you select. This will allow for reasonable growth between trimmings.

Completed registration kit. At present, no features are disabled on non-registered version because no public release is scheduled. Version 3.02 and above are only scheduled for release to registered users of CWAC.

Fixed a couple of bugs in spacing that appeared in the viewing module for conversion data.

Fixed the bug that caused errors when entering the log viewer after executing a conversion. Stupid bug, but it happens.

Completed BBS Express options: Conversion will convert the archives, rename the description files, overwrite the originals, and maintain the time/date stamp of the originals. You may change these options as you see fit. It was suggested by Terry May to have the time/date stamp maintained so that files would not appear as new in the download listings. Suggestion taken and implemented.

Beginning addition of an 'abort conversions' feature. It was suggested that the user have the option to abort a conversion in process. While I do not feel it necessary to abort a conversion on the current file, it does make sense to be able to abort between files. This will be in before the official release of 3.02.

Delay on the examination of the original documentation for CWAC may cause it to not be immediately included with the release of 3.02. Several features have been updated and included in 3.02 that were not documented in the original documentation.

****

Version 3.02

Scheduled release: 7/23/93

RATSoft module is on temporary hold. Some of the work is complete. Announcements of a new version of RATSoft has put awrench in the works. Not to mention the author must have seen CWAC and is now seeming to include most of the functions of CWAC internally.

Express modules are 100% complete.

Fixed a bug that caused havoc for an afternoon. It was not possible for you to perform conversions on your rebuild directory, yet I was allowing you to set that up as a source directory for conversions. Bug has been found and squirted with Raid.

Updated documentation may or may not be included with the updated version initially. I am working on catching them up, but I really hate doing docs. I try to make the program straight forward enough that they are not really necessary.

Log file operations have been expanded to record the amount of bytes saved or lost during a conversion. This information will also be available during a conversion. The bytes saved or lost on the last conversion will be displayed on the screen for you to see.

The hidden accessory box on the main menu has now been made visible. Clicking on it will give you access to the accessory menu and there is an option to call a file selector, so you can use file selectors like UIS III or LGS to do file operations. These accessory boxes have been there since 3.00, but a couple of the beta testers forced me to make them visible.

****
W A R N I N G !!!!!!!
****

I spend about an hour on the phone with a user who was having consistent errors while running CWAC. It appeared to actually be a CWAC error so I was evaluating the code operations as he was running the program on the other end of the line. At the end of the hour, I finally asked what was in the AUTO folder. Turned out that he was running with TOS 1.06 and had the TOS 1.4 fix and

the Poolfix programs in his AUTO folder. As these programs are
not necessary in TOS 1.06, they caused a MAJOR memory glitch and
resulted in continual bombs when CWAC was running. Please do
yourself a favor and examine what you run in your AUTO folder
before giving up on any program. AUTO folder programs are
usually something that is memory resident from the time it is run
until the time you turn off the computer. Another common culprit
is the accessories that you run. They remain memory resident
also. Anything that remains in memory constantly is capable of
causing major conflicts with other programs.

****
A hearty "Quack" to those who have registered CWAC during this
initial release phase. Please send your request for upgrades to3.02 when you
are ready. An upgrade request is to include your
name, address, phone number, BBS name (if applicable), BBS phone
number (if applicable), a 3.5" formatted floppy (720K please),
and a self-addressed-stamped envelope. If I do not already have
your registration on file, don't send me a request for upgrade,
send me your registration with the shareware fees.

Registration for CWAC is $10 ($12 if you do not wish to supply a
disk and return envelope or if you wish to use a Gift-Of-Time on
GEnie). Please note that you must fill out and fmail me the
registration form if you wish to use the Gift-Of-Time. I will
not mail your registered copy to you until I receive it.

The response has been adequate enough to keep me interested, but
I must admit that some registrations would be nice. To date,
including CWAC 2.04, CWAC has received a grand total of 8
registrations. As I work to enhance CWAC, perhaps the hold-outs
will work to enhance this number.

There was a really good series of articles about D2D recording in Septembers
Sound On Sound (UK). If enough people mail me, I'll scan them and post them.

The Falcon is FINE for D2D multitracking. Digital Village in the UK has a lot
of advice and information. I'm not sure of the phone number now. I'll mail it
tomorrow

But it does give access to higher baud rates in old programs. For example,
one could remap 300 baud to 38400 for programs that only go up to 9600 or
19200 (which is a lot of programs). It might also be able to allow programs
that assume MODEM1 to use MODEM2 or SERIAL2 (the serial CPX can do this
for sure). So, in a way, it can increase line speed.

Guck 18B is on Delphi as well as on at least one of the Goper sites available from Delphi, I just can't remember which one (sigh). Oops, that should read "Gopher sites". Now how can I get the dox in English? I got Guck working by using the INSTGUCK.PRG (install Guck program). It's a great file viewer that also shows pix and has forward and backward scroll and page functions!

Even better Guck unloads when not in use so it doesn't eat up memory, It also has print and print block functions but I need someone who can read German to tell me/us how those work. Any German speakers here?

The Patch of the Desktop.inf file is a cludge, what it does is to set the
INF file for Mono operation....

Stick to the STE Fix program, and use the real Atari one, you will also need
to get hold of Poolfx92....

They don't pay them enough to know anything about computers. :)

I would highly recommend a Falcon for D2D recording. On the PC you need
hardware and expensive software for about 6-8 tracks. Software is harder
to find on Atari, but not audio software. Cubase is real easy to find,
with good support.

3665. [SOFTWARE] MiNTOS Release 1.4.1 now available.

>!? The manual looked just as solid as any other I've seen, and I've
>_Never_ heard of one "wearing out".... What bug-fix anyway? AFAIK
>there isn't one!

Steve, me and my room mate both play Elite II, It's our favorite Game. We both agree! I paid $50 for it at Vision Computers here in Oregon. They sent it to me UPS. I paid $50 for it and because my roommate has no money invested in it, He didn't take good care of it. He would repeatedly leave the Manual open to different pages and sometime leave the spine of the book elevated high up kind of like an inverted V, there by causing splitting cracks in the spine. And as people know, you must have a manual or you can't play the Game because that's how the Game's copy protection works. for $50 GameTek and Konami could include a manual with a spiral binding. I need a photocopied manual so I can play the game. GameTek made the Game so so you can't play the game without the manual due to copy protection yet they include a manual that at least in my case fell apart. The least they could is include a manual with a spiral binding. If I could buy a better quality manual that would last, one with a spiral binding, I would buy it. And it would have to be able to pass the Games Copy Protection!

>How about posting something from the disk-label such as serial number!?

Steve, I'm telling you the truth, and I don't like your implications. I don't know where you come from, but where I got my Game Package is Eugene, Oregon. Sold by Vision Computers: Proprieter, Bob Burns. I looked on my registration card and their isn't a Registration number or a serial number, neither is their a serial number on either of the two disks. And the Disks on my game are blue with the Labels Screen Printed (Painted On for those of you who Don't know.) on.

If you think I'm lying, call Bob Burns, he's an Atari Dealer in Eugene, Oregon. Here is his store address:

Vision Computers
2511 W. 11th Ave. No. B
Eugene, Oregon. 97402
Phone (Voice) (503)485-1424 U.S.

Make sure you call him to verify that I bought it from him before you make any more accusations. And I expect an apology (E-Mail would be OK) when you verify my story. When you call him, ask about Ben Smith, V.P. of A.C.E. of America and former V.P. of the Portland Atari Club. If he still doesn't remember, tell Him I'm up in Portland, He made my club a special deal on STraightFAX II and sold me Elite II for $45.00 plus $4.50 COD and $2.00

shipping. Invoice #16246 07/27/94, 01:45 PM SalesMan: Bob

Please check the Facts before you become a spurious fountain of
MisInformation.

--Thanks--

>Please tell me that you have the real thing and not just a copy of
>Elite II...??

I have the real thing, just before I read your message, I replied to someone
else who accused me of having a pirate copy. Please read it, I'm sure you'll
be satisfied.

>If one finds that your Pagers are getting worn, you just go get a copy of those
>pages, they only the copy gets warn...!!!!

To photoCopy it my self would further damage the manual. The pages are
not wearing out, the spine is spliitting from top to bottom. To photoCopy it,
I would have to lay it flat with the spine sticking up. By the time I'm
done PhotoCopying the entire manual, I won't have one manual, I'll have
several pieces of the manual where it's split up and down the Spine.

>There are no patches of fixes for Elite II...

I thought their were bug fixes for Elite II because I saw someone asking
for them on the InterNet. I hope someone comes out with some bug fixes.
Sorry.

3673. NEODESK 4 NIC Problem..

Newsgroup: comp.sys.atari.st
Date: 1994-09-12 10:41:22 UTC
From: sheppard_r@kosmos.wcc.govt.nz
Message-ID: <351b8i$sp2@golem.wcc.govt.nz>
Source record: 180731

Problems with NEODESK 4 when using the Icon editor...

When in the Icon Editor, Med Res, I have 3 windows open, Directory where
the NIC files are, the Neodesk Icons and a NIC file..

I have been looking at a few NIC files and copying one or
2 Icons across, after accessing about 10, ? NIC files, I get
a Alert box stating not enough memory..!

I exit out of this, then try to close the NIC window, the thing crashed back
to TOS Desktop...

I don't remember this problem with NEOESK 3, as I performed the same thing,
some time back...

MEGA ST with TOS 1.4, ADspeed (16mhz cpu) and 2 megs of Ram,
and running NVDI 2.5, and built in Quantum LPS 240s hard drive.

I also did some speed checks...

For NEODESK 3 to reload itsself it takes 2 seconds on my system..??
with NEODESK 4 it takes some 6 seconds, why this slow, ? there is no
hard disk activity for most of this time..?

Booting after Xboot 3, this includes other programs...

NEODESK 3 = 8 seconds..
NEODESK 4 = 12 seconds...

Why this slow...?

I can't confirm if it works on a Mega STe, but I can confirm that the second disk bombed out on me (4mb STe). This is an original of the software. COuld be from the same batch? Anyway, I copied the second disk with Fcopy (it doesn't seem to be protected) and when it kept reporting sector errors, I kept hitting 'Retry' until I got the whole disk read in without errors.

Now that I've copied the second disk the game works fine.

Where does the game bomb out on you Mega STe? If it's on the second disk it can't be the protection, because only the first disk is protected.

Good luck with the repair job,

Simon.

PS I have two ST's here. The second disk wouldn't copy at all on one of the machines. Maybe that's why the game boots OK on your other machine - different head alignment/motor speed/something?

>I am wondering, and hopeing not, has Wolfgang given up on Connect?

Well, I can't speak for Wolfgang, but as far as I'm informed :-) he has *not* given up CoNnect. I should know, as I'm writing the manual. I think, he'll say something, when he's back from the physics conference.

One should take into account, that Wolfgang has 1. a family and 2. a job to do and currently there's very much work, as our group for offline reconstruction software is not *that* big ... CoNnect is something to work on, when there's some time left for that. But it is definitely *not* given up. CoNnect is given up, when Wolfgang says so, not earlier.

Regards,
Philipp

Yup that works, and as I said in an earlier message; under multitos you can
simply drag the files to upload from a desktop window into the connect
window.

Roger Sheppard. (sheppard_r@ix.wcc.govt.nz) wrote:
> Please Please can the Info screen be removed
> from the NEODESK 4 when booting...??

The "info screen" does not affect load time. It is simply drawn once and then undrawn when replaced with the desktop pattern. There are no pauses built-in.

> Also the speed of loading is far to slow, it looks like
> I will be going back to using NEODESK III, to me its far to messy,
> far to cluttered...

I just did some speed comparisons on an 8Mhz ST, and did not find the difference that significant. While there is a slight additional delay in load time (due to the tighter compression routines) there are other factors that could be affecting your load time: desktop picture, gdos desktop notes, etc.

> I can't use my nice collection on NEODESK III Icons, there should have been
> a way to convert from NEODESK III to IV, the suplied program did nothing
> for my Icons...??

There is. Just open the icon editor and either open a .NIC file from NeoDesk 3 or just read in the NeoDesk 3 resource file. Either method works. The "INF file coverter" is only for converting information files (hence the name).

> Why not do the menus like the way the Germans do it, where a menu item links
> to another normaly hidden menu to the right, ? then there would be no need
> for those small windows, then all the options can be fitted on the one menu
> bar...

The sub-menu system you mention is more popular on the Macintosh. However, we decided to follow the established GEM standard that Atari has been developing in AES 4.x. That includes using Window menus before using sub-menus (which are usually meant to mean multiple options of a single command). In any case, sub-menus would not have offered a clear way to indicate to which window a command would affect (a common complaint in NeoDesk 3).

> How do I display directory items in text when using the Icon editor...??

You can't. This is a limitation, mostly due to save on the size/development time of the icon editor. The icon editor is a separate program that has a desktop that looks like NeoDesk. However, its desktop is not the NeoDesk desktop (which does have all those capabilities).

> The copy/move buttons are far to small, also cluttered with other options,
> may be these should be hidden, similar to the way Germans do it......??

I must admit, I am confused. How do you use a button that is hidden?

> To me there are far to many options, and getting far to cluttered, it looks
> like you have tried to fit the Kitchen sink in it, it needs tidying up,
> may be with hidden options/menus..

Ideas are welcome. I will add that I never thought we would reach the day
that people would say "you added too much". We've worked very hard at NOT
creating a cluttered look (thus the addition of additional menus).
However, I would be interested to hear any areas that you have specific
complaints about.

> Please note, this was after 1 hour of use, and are just my opinions, there
> could have been mistakes in the way I am using it, or even seeing it...

I'll be curious to hear your opinion about some longer use. ;-)

> But I do like the ways the German programers fit some of there options/menus
> in there programs....

A somewhat vague statement at best. Are there some specific
ideas/concepts you prefer? Keep in mind that in writing NeoDesk we've
tried to follow general guidelines of the GEM interface.

> Can some one arange for all those NEODESK 4 Icon files that are now on GEnie
> to be available on the net...??

Good luck. Last count, there were QUITE a bit on GEnie. <grin>. Plus we
are now trying to look into seeing if we can start reading in Mac icons
(I didn't say that, now did I?).

You can also just read the NeoDesk 3 resource files directly.

>] Please Please can the Info screen be removed
>] from the NEODESK 4 when booting...??

> This does look pretty stupid, can it??

Sorry, welcome to the modern world of copyright laws. Several countries
(and the U.S. is included) now require that copyrights be "clearly
displayed at bootup). This doesn't slow down the program loading, but it
is required (we do the same thing with Geneva).

I really don't have the time for this. There are literally HUNDREDS of
icon files on GEnie. In addition to the THOUSANDS of windows icons out
there (which NeoDesk 4 can also read). Maybe some kind soul with a little
more free time can bring over some of the more interesting compilations.

I must admit, your message is a little hard to follow. You had 10 NIC
files open at once? I can see how you might run out of memory (though it
shound not crash, that does sound like a problem). I will play around
with it and see what I can find.

> hard disk activity for most of this time..?

Three things:

1. Add about 1-2 seconds for loading/de-compressing NeoDesk 4 (which is a
little larger than NeoDesk 3).
2. Add about 1-2 seconds for loading/de-compressing the Geneva/AES4
emulation code. (this goes away if you use Geneva)
3. Add about 1-2 seconds if you are using a IMG or other desktop picture
that requires de-coding.

> Booting after Xboot 3, this includes other programs...

> NEODESK 3 = 8 seconds..
> NEODESK 4 = 12 seconds...

Hmmm that's 4 seconds. Is it 6 or 4?

3685. Gemulator

Newsgroup: comp.sys.atari.st
Date: 1994-09-12 14:03:14 UTC
From: simonh@perth.DIALix.oz.au
Message-ID: <351n32$c8j$1@perth.dialix.oz.au>
Source record: 180656

My wife, Josie, has an old 386 and a 2mb STe. She uses the 386 for programming (20%), and the STe for everything else (80%), including games, art, word processing, DTP, etc etc.

Question is, has anyone seen or used the Gemulator card? She's thinking of combining both her machines into one box (a 486), so that she can clear some desk space.

Like I said, she uses the ST 80% of the time, so it's important to her that as much stuff as possible works on the Gemulator.

We still have a 4mb STe (my machine), and we're right out of bench space! Imagine a small bedroom with two desks along one wall, with FIVE monitors, two external disk drives, a modem, two printers, a handy scanner, my 210mb hard disk, a megafile 60, a Supercharger, and other assorted bits and pieces all in a space 3 metres wide, and you start to get the picture...

Thanks for any help you can offer...

Simon

I'd appreciate seeing this response as well posted on the net was ell. I have
a Mega STe, and was disappointed to find out that I could not run a lot of
my favorite games that DID run on my old 520ST. In fact, if anyone could take
the time, or has already done so, to compile a list of games that are
compatable with my Mega STe, that would be appreciated. I'd like to
mail order them from Toad Computer, but I'd hate to get stuck with a $50
worthless diskette ---Mark van Wyk

>-Steve
>selick@acs.bu.edu

Ok.. if enough people mail me promising to register for an STE version
of my falcon MPEG player then I will certainly do a grey-scale 68000 version.
But *BE WARNED* its not going to be fast. A colour version is not viable,
(ever seen 24bit colour converted down to 16?).

Also version 0.5 of the Falcon MPEG player will be out this week sometime.
At the same time the colour version will be sent to those people who have
registered. I *urge* you to support this product, if more people don't register
then I will not waste my time anymore - a DSP MPEG player is not something that
can be knocked up in a day.

Cheers
Griff

Oh, super. Hopefully the Bitmap Bros. will be able to do more for me.

> >If the commercial version doesn't boot due to copy protection,
> >I get to hunt for a cracked copy.....
>
> I hope you have a flame proof suit.... :)

I can see how my comment might be misinterpreted as flamebait, so I'll
expand on it. Right now, I'm pissed because I bought a game and it does not
work. According to your comments above, it might never work correctly.
I am going to write a letter to the Bitmap's, and send my disks in for
replacements, noting that they state in their own manual that the game will
work on MegaSTE computers. Hopefully, they'll send me disks that will work,
and I will be happy as a clam. If this does not solve my problem, and if by
some miracle a cracked copy happens to fall into my hands, then I think it
would be reasonable for me to keep it. Please note the high density of "ifs".
With further thought and a cooler head, I might decide not to. In any case,
my response will be one that I consider honest. I am not a thief.

In my opinion, the spirit of commercial software agreements is, in general,
"You should buy this software, and you should not give away any copies".
I have no intention of breaking either of these rules, nor did I intend to
imply otherwise.

Yet another option would be for me to attempt to crack the protection myself.
I did this for my (fully original and paid for) copy of Hard Drivin' 2 so
it would work on my MegaSTE. This was probably technically illegal, but
as it was for my own use only, and done on my own personal property, I
personally considered it to be a reasonable response to the game not working
on my MegaSTE. Your mileage may vary.

> BTW has anyone got Chaos Engine to work on a Falcon, I really want to
> play this game again.

Heck, I'd like to play it for the first time! :-)

There is the server by PAM software which is quite slow and works on TT and
Falcon with coprocessor. The price including ethernet adapter is about
1500,-.
X/software once sold servers for ST and TT (not Falcon) which cost about the
same price, including ethernet adapter. These servers were better than the
one by PAM but as far as I know they are not supported any more.

Source record: 180749

If I'm not mistaken, I believe the disbelief came about from your description... Where are the pages? If they fell out, each page is clearly labeled, and could be easily put back into its proper location. Mysterious disappearing pages and then a request for a photocopied manual (which is a clear violation of copyright law) can easily cause skepticism in even the most modest of intellects.

Is an apology really necessary?

From: hz@caesar.gun.de
Message-ID: <EIMTABUQ12UP@caesar.gun.de>
Source record: 180654

Hello,

is there anyone, who can explain me, how to download files from
CompuServe?
Up to now I used the German version of STalker to connect to
CompuServe. There were no difficulties to download, because this
program does include the CompuServe B-protocoll.
Now I'm changing to another terminal program called STarCall. It
does'nt include any program to transfer files by z-modem or y-modem.
Tere are no problems to transfer from user mailboxes using Michael
Ziegler GSZRZ-program by z-modem. But CompuServe does not support
z-modem.
So I am looking for an external program for y-modem to work properly;
I've tried XYZ.TTP, but it did'nt work.
Can someone tell me, how to configure GSZRZ for y-modem to download a
file from CompuServe.
Or is there any ttp-program supporting CIS-B-protocol for using as an
external programm in another terminal program?

Thanks

Hartmut

why not! my orig 520st upgraded this way (on the day i got the machine from the store) still sits next to my TT (and is working just fine!). here are gerts (revised) instructions:

NOTE: This is an REVISED,TESTED version of the original text downloaded from CompuServe. December 6, 1985

(This was REVISED AND TESTED by an annonymous engineer on Atari's developement staff. The addition of the resistors should provide a long life to your machine, but the warning below is STILL IN EFFECT. This is not an official sanction of the modification. USE WITH CARE!!!)

Here's the 1 Meg upgrade directions:

I have brought this over un-editted from the arpanet info-st mailing list. I TAKE NO RESPONSIBILITY FOR ITS CONTENT OR ACCURACY. I HAVE NOT TRIED THIS MODIFICATION ON MY OWN ST AS YET. I AM PASSING THIS ALONG TO THOSE WHO DO WISH TO TRY IT. FOLLOW THE DIRECTIONS AT YOUR OWN RISK.
--Dwight McKay (75776,1521)

From: gert@pescadero

WARNING: This is a hardware modification that will void the warranty of your 520ST. If you do not have the appropriate tools or experience you have a substantial chance of ruining your 520ST. Proceed at your own risk! This modification has been in my 520ST without any problems for 6 days now. However, I have (of course) not checked with knowledgable sources at Atari to verify if this modification endangers the long term machine reliability and/or software compatibility (I suspect it may endanger their software compatibility if enough of us do it!)

Tools & components needed :

16 256k * 1 RAM chips, 150 ns access time type, e. g. NEC 41256C-15 (avilable at e. g. Fry's Electronics, Sunnyvale, CA for $2.77 each)

A good quality, preferrably temperature controlled soldering iron, with a minature tip (tip should be narrow enough to avoid touching 2 I. C. pins at the same time). E. g. Weller type soldering station.

Good quality resin core solder (thin).

Approximately 4 foot of #24 AWG insulated wire and a good stripper for it and 2 feet of #22 AWG solid tinned copper bus wire. You will have to route 3 wires over a sequence if I.C. pins.

Desoldering wick and solder suction tool.

Philips type screwdriver (for opening your ST), tweezers, pliers, etc.

A steady hand and self-confidence.

Explaination of the modification :

(Please read the rest of this document before starting. It may save you time and an 520ST)

The current memory inside the 530ST consists of 16 256K*1 RAM chips. Address (A0..A8) lines are common to all those chips. The WriteEnable line is also common to all chips. Data (in and out) lines are of course individual. The RAS (row-address strobe) line is common to all chips. The 8 chis foring the high order byte group have one common CAS line, and the 8 forming the low order byte group have one common CAS line (CAS is used as enable for write operations, such that WriteEnable can be common to both groups). The high order group from MSB to LSB consists of U45, 44, 43, 42, 38, 34, 33, 32. The low order group of U30, 29, 28, 25, 24, 28, 27, 26. Note that all chips are adjacent, though the numbering has gaps. RAS0, CAS0H, and CAS0L are supplied from U1 pin 8,6 and 7 respectively (The 0 indicates bank 0)

Bank 1 that you are going to build in will be "piggy-backed" on top of the current chips, where all pins of the new chips EXCEPT RAS (pin 4) and CAS (pin 15) are soldered to the old chips equivalent pins. Thus they will end up sharing addresses, data, WriteEnable and power and ground with the existing chips.

All RAS pis of the new chips are wired together and will be supplied with the "RAS1" signal generated on pin 18 of U15 (the memory controller, marked 3H-2119C or so). The CAS pins of the 8 new high order byte chips (on top of U45..U32) are wired together and supplied from the "CAS1H" signal

generated on pin 22 of U15. Analogously, the CAS pins of the new U30 to U16 are wired together and supplied with "CAS1L" from pin 21 of U15.

How to go about it:

Step 1: Open up your 520ST, pull off the keyboard connector and remove the main circuit card from its top and bottom shielding. Make sure to remember which screws go where and note the keyboard connector orientation.

Step 2: Desolder all of the capacitors adjacent to the existing RAM chips. (DO NOT SKIP THIS STEP. You'll lose time if you do, and worse, the modification will no be reliable since you can't solder pins obstructed by the capacitors reliably (if at all)). To desolder them, I found it easiest to heat the island on the non component side, and bend the wires straight. After doing that or each capacitor, turn over to the component side and heat the islands wile pulling the capacitor out with the tweezers.

Step 3: Open up the holes of all the desoldered capacitors, using a combiation of de-soldering wick and suction tool. Do this from the non component side. If certain holes are difficult to open up, you may want to use a wood splinter. (push it through while heating). Be carefull to remove all solder debris!! THE REASON for opening the holes NOW is that they will be less accessible once you've done the other steps! Patience is a virtue.

(NOTE: Step 2 & 3 are the only ones that may damage your ST PC board. Be sure not to use excessive force while pullling out the capacitors. If you damage your PC board anyway, cure the problem now and not later).

Step 4: In this step we will piggyback the new RAM's on top of the old oes. Be sure to connect all pins except pin 4 (RAS) and 15 (CAS). The best way to go about this is to do chip by chip. First, bend the pins of the new RAM's suchthat hey are perpendicular to the package (instead of having slightly spread "cowboy legs"). Use pliers to bend pin 4 and 15 such that the legs are 180 degrees from their normal position, so they stick up in the air above the plane of the top surface of the chips. Don't make an absolute sharp 180 degree bend since some manufacturers' pins may snap off. Leave a little curve in the leg, but insure that is above the plane of the top surface of the chip.

Using #22 AWG to #16 AWG tinned solid copper wire you will form three buses along the top surface of the new d-rams. Cut a #22 AWG solid copper wire the length of the 16 d-rams on the PCB. The RAS bus is formed by soldering all the pin

4's of the new d-rams to the solid copper wire. The bus wire must be seated against the top surface of the new d-rams without a gap. This insures clearance between the top shield and the pins of the d-rams.

After soldering all 16 d-rams to the bus clip off any portion of the pins that extend above the top of the bus wire. Now cut a #22 AWG solid copper wire the length of the 16 d-rams. Place the bus wire along the top surface of the new d-rams in contact with all the pin 15's of the new d-rams. Solder every pin 15 to this bus and as above insure that the wire is seated solidly against the top surface of the new d-rams. Cut off all excess pin length sticking up above the top of the bus wire. Using diagonal cutters remove the section of the bus connecting the new U30 pin 15 to the new U32 pin 15. This divides the bus in half with the new U16, 17, 18, 24, 28, 29 having a common pin 15. The new U32, 33, 34, 38, 42, 43, 44, 45 now have a common pin 15, seperated from the other common bus.

(NOTE: until step 6 is finished, do no in any way apply power to your ST. This intermediate state of affairs will damage your memory chips!!)

Step 5: Remount all the desoldered capacitors. Bend the pins like they were before resoldering, suchthat they will not touch the lower shielding. Solder from the non component side.

Step 6: Orient the 520ST PCB so that you are looking at the solder side of the PCB (non-component side), with the row of d-rams nearest you. Find the double square pattern of pads at the 68-pin socket of the memory controller, U15 (3H2119). The following is a guide to locating the six memory controller pins necessary to complete the wiring. The socket is numbered conterclockwise, starting with pin 1, the square pad (look closely) in the middle of the bottom outside row. The sequence, moving counterclockwise from pin 1, first on the outside square ONLY: (NOTE: the sequence ")(" means to make a 90-degree turn counterclockwise, i.e. around the corner)

1,3,5,7,9)(10,12,14,16,18,20,22,24,26)(27,29,31,33,35,37,39,41,43)(44,46,48,50,52,54,56,58,60)(61,63,65,67

The sequence, moving counterclockwise along the inside square only, and starting with the left side of the bottom row:

(62,64,66,68,2,4,6,8)(11,13,15,17,19,21,23,25)(28,30,32,34,36,38,40,42)(45,47,49,51,53,55,57,59)

Six 68-ohm 1/4W plus/minus 10% carbon film resistors must be added when adding memory. These series terminating resistors minimize undershoot which may damage BOTH BANKS of d-rams if omitted. Solder a 68-ohm resistor to pin 18 of U15, RAS1. Solder a #24 AWG stranded wire from the remaining end of the 68-ohm resistor to the pin 4 bus (RAS) of all the new d-rams. that is the new U16, 17, 18, 24, 25, 28, 29, 30, 32, 33, 34, 38, 42, 43, 44, and 45.

Solder a 68-ohm resistor to pin 22 of U15, CASH1. Solder a #24 AWG stranded wire from the remaining end of the 68-ohm resistor to pin 15 bus (CAS) of the new U45,44,43,42,38,34,33,32.

Solder a 68-ohm resistor to pin 21 of U15, CASIL. Solder a #24 AWG stranded wire from the remaining end of the 68-ohm resistor to pin 15 bus (CAS) of the new U30, 29,28,25,24,18,17,16.

For best results in all three cases above solder the wires coming from the resistors to the middle of the three bus wires in a "T" fashion rather than at one end of the buses.

Use a continuity tester to find the following three traces -- do not depend on visual inspection. Now install three 68-ohm series terminating resistors in the original 512K bank of ram. Be very careful while soldering to these narrow traces, since excessive heat can easily lift a trace from the board. Use an Exacto knife to gently remove solder mask from traces.

Cut the trace leading from pin 8, RAS0, of U15 near U15. Solder a 68-ohm resistor in series with the trace.

Cut the trace leading from pin 6, CAS0H, of U15 near U15. Solder a 68-ohm resistor in series with the trace.

Cut the trace leading from pin 7, CAS0L, of U15 near U15. Solder a 68-ohm resistor in series with the trace.

Step 7: Sit back. Use Brain. Do you feel confident about the quality of your work? No mistakes? Check evrything once again if you are but a little uncertain. Applying power with errors might make your ST into a decorative, nonfunctional piece of art. OK. Either rebuild your ST into its shielding and cabinet, or put it onto a surface clear of wires and solder remians and connect it to monitor, disk and supply. Boot it.

It it boots, you're probably there. Test if the new memory works by looking at the phystop variable ($42E) with SID if you have the developer stuff. It should read $100000 (1M hex). Also note that memcntlr ($424) now holds 5 instead of 4, and that v_bas_ad ($44E) now holds $F80000 (screen bitmap

origin). If you don't have the developer stuff, try a single drive copy and check that you get the whole disk in one buffer instead of two.

If the new memory does not seem to exist, use SID to deposit and retrieve words on locations $80000 and up (1/2 Meg hex). If bit errors occur, the ST bootROM did not detect the extension (it checks all bits of 512 locations by testing a psedo random sequence, before accepting a memory bank). Try to pin point the faulty chip(s) and remove the error.

If it doesn't boot, you're in trouble. I'm sorry. It is difficult to give hints on what to do here. So many possibilities. Desoldering the new chips probably won't work (if the old ones were functional, the ST would still boot). Check for hidden short:circuit on the RAM pins. May also be that you have a flaky new pin connection.

That's all there is...

Many thanks to all who responded to my request for advice about ST communication software. The second response I recieved was from a fellow who works a stone's throw from me, so he's preparing several floppies with different programs on them; I'll mail them to my parents and they can see what they like. Thanks to all who've responded (which is quite a few!).

No I am not. The way Usenet works on CIX, I first download messages, then
decide if I want them or not. Don't you people know any Netiquette? And on
CIX we pay for the time, not by the byte.

In any case, I thought it was common knowledge that this area is NOT for
binaries, unless they are very small. Don't assume that everyone has the
same Net access system.

3714. Atari Ghostscript 3.01 Beta Release Available

Newsgroup: comp.sys.atari.st
Date: 1994-09-12 23:15:25 UTC
From: timg@ccwf.cc.utexas.edu
Message-ID: <Cw3r3G.Fxv@world.std.com>
Source record: 180616
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.announce

Hi,

A beta release of Aladdin Ghostscript 3.01 is now available from

ftp://lifshitz.ph.utexas.edu/pub/atari/ghostscript/gs301bt1.zoo.

The code in this archive is a 68000 executable, and has all of the PostScript support files and three fonts (Courier, Times-Roman, Charter-Italic) compiled into the code. This reduces the baggage that accompanies GS, but it makes the executable rather large (~800K). Also included in the archive are a bunch of files to support the new on-line help features.

The extensive changes in the Atari interface are certain to have introduced bugs, so please expect them. When enough kind people have made useful bug reports and most problems appear to be fixed, I plan to make available several versions with various levels of hardware support. There will probably also be versions without the start-up files compiled into the executable.

The Atari interface has changed a good deal since GS 2.61. Look at http://godel.ph.utexas.edu/Members/timg/gs/gs.html if you want an overview of what has changed before you download anything.

>Mysterious disappearing pages and then a request for a photocopied manual
>(which is a clear violation of copyright law) can easily cause skepticism
>in even the most modest of intellects.

>Is an apology really necessary?

I don't see that it is. The request was EXTREMELY spurious. I cannot
imagine how a photocopied manual could possibly be of assistance to the
original requester. They have the manual. They can photocopy it just
as well as anyone else. They can also get it rebound (cheaper than
photocopying!).

Whether or not the original request was legitimate or not, I'm GLAD to
see other readers concerned and cautious about the request.

BTW, even if you do have a copy of a book, it is illegal to take a copy
from someone else. For example, if I have an old worn-out edition of
Gulliver's Travels, I am not entitled to a photocopy of a new edition.
(Morally I may be, but legally I am not)

<sigh> Read, Roger. The key statement is "...give ACCESS to higher...".
With MegaSTE/TT/Falcon machines, the faster serial potentials are already
there, but not all programs allow one to use them, as many were written when
9600 or 19200 was the max serial speed attainable on an ST. HSMODA04 can
fix this in the manner described above.

Incidentally, for virtually all programs (except those that directly support
RSVE, like CoNnect), one still needs to use HSMODA04 in conjunction with the
RSVE mod to have access to the faster Modem1 speeds. Thus, I believe it
is accurate to say that HSMODA04 gives one the ability to use the serial
hardware in the machines at the fastest speeds, RSVE or stock.

Thanks much. I'll stick this in an lzh file and file it on atari.archive
for future reference, if you don't mind.

I think I have managed to design my own SIMM upgrade, borrowing very
heavily from an existing memory upgrade instruction set currently on a.a.u.e.
If I get it to work, I'll put my instructions there as well. Actually, given
that all goes as planned, I'm amazed that it is this easy (famous last words).
I've also learned a bit about how modern memory works while researching this
project.

I believe there was a German product that did this, several years ago. I
don't think it ever made this side of the pond, unfortunately.

It was none other than -Unknown- that wrote on 7 Sep 94 that ,

-> I saw an AUTO folder program that fixes it, but you must be running
-> WINX. I don't remember the name, but it should be in umich under

not quite correct .You have to load GEM into RAM to use both SHBUF and WINX
either with GEMRAM with just loads GEM or with ROMSPEED which loads the entire
ROM into RAM . GEmram uses much less memory to work but does have a number of
incompatibility's (none thankfully which effect me !), romspeed is required to
use OUTSIDE (Virtual memory manager) however.

-> either :-). If you find a fix that works without WINX, let me know;
-> I'd like to have something like that too.

no idea the file name on FTP sites but through the EST file network it was
called SHBUF13.ZIP

G1> .ACC files have to stay in your root directory while auto-load prgs
G1> go in the auto directory.

Not true ...there is a program ACC.PRG which allows Acc's to be loaded from a folder .MultiTOS also allows it as does TCache (Which works on a Falcon where ACC.PRG does NOT .)

How about the following for an idea for an mpeg player on a standard
ST, decompress the mpeg files to a series of spectrum 512 pictures and
then play the sequence of spectrum pictures by simply loading them and
displaying them? I know this will take time to convert and alot of HD
space but should give good results even on a standard ST.

Dave.

3744. VGA and TT

Newsgroup: comp.sys.atari.st
Date: 1994-09-13 11:39:48 UTC
From: sforseil@vub.ac.be
Message-ID: <354324$5fr@rc1.vub.ac.be>
Source record: 180687

I got a nice multisynch SVGA monitor, but if I use it with
the TT, the image is squeezed (it doesn't accept TT's low hor frequ I
think).

Does someone know the cheaper way to use a SVGA monitor on
a TT (at TT's resolutions, i.e. 640x480x16)?

Thanks.

Thanks for the reply to my comments! Now to mention the item I forgot about... will future versions/revisions to NeoDesk 4 all one to toggle the speed of a CaTTamaran accelerator for programs which are installed applications or which make use of .NPI files? It would be quite handy for those few bit of software that don't like running above 32 MHz for very long at a time...

Thanks again!

Michael

ACC13.PRG looks for .RSC files in the ACCS folder. Maybe you had an earlier version. Chameleon is great for certain accessories, but I've found that some are incompatible with it. Accessories that have to alter settings at boot (like G+Plus and Warp9), and CLIs that run as accessories give particular problems. I use the Chameleon (v1.19) for accessories that it doesn't have problems with (which is *most* accessories) and those that I don't need on a regular basis. This allows me to have two "revolving" accessory slots.

HT> programs that do that, but they replace the "ping" sound
HT> inside themachine. I don't necessarily want the same (talking
HT> message) to replace the warning"pling". And is it possible to
HT> have another program play different samples depending on what
HT> kind of a situation the machine was in (different kind of
HT> errors messages= different kind of "beeps")

Hallvard:

There's an AUTO folder program called DA_SOUND that allows for playing of digital samples on bootup. Also, Superboot V.8 allows for booting up with a starting sound as well. I use both - first Superboot for my opening sound, and then DA_SOUND to run a Holodeck "program complete" sample to tell me all my AUTO folder programs have been launched.

For tying in samples onto system events, get GEMsound - I've used it for about two years for assigning sounds to things like windows opening and closing, alert boxes, the system bell, and the file selector. Highly recommended shareware.

> mail order them from Toad Computer, but I'd hate to get stuck with a $50
> worthless diskette ---Mark van Wyk

I know how you feel :-). First, there are a set of games that won't work on any STE. Then, there is the subset of games that will work on a 520/1040STE (with TOS 1.6x), but not a MegaSTE (TOS 2.x). It is my guess that this is due to some fairly low-level changes in the floppy routines in TOS 2.x, so folks that have installed special boards that allow the use of TOS 2.x in older STs would probably also experience the problem (however, all the boards that I know of that do this also allow one to install an older TOS and switch between them, lucky buggers).

The symptoms of this problem are fairly obvious. The game in question will fail to boot correctly, usually very quickly. For example, Defender II will produce bombs as soon as the bootsector is read and executed. In the case of the Chaos Engine, the bootsector is read, then the memory test comes up (usually negated by an executable boot disk, so an obvious symptom of a problem), some drive noise occurs, and the desktop pops up. If the game gets past the initial bootup stage and then dies, it is probably STE incompatible in general.

It is interesting to note that one of the most common viruses on the ST, the Key (or Signum) virus, does not execute properly with TOS 2.x. Infected disks will fail to work, for no apparent reason. So, if you have some disks that should work fine (i.e. they only have regular files on them), but they don't, check them with Vkiller or other virus checker. I discovered a bunch of disks that had be reinfected with the Key virus this way (a bit embarassing, for someone in my field :-). It is possible that some of your game disks could have this problem, though usually game disks have executable bootsectors of their own. It is worth looking into, though, as I did manage to get a few more games to work after wiping the *$%&@# Key virus off of them.

As for a comprehensive list, I don't know of one. If you have some particular games you would like to email me about, and if I happen to have them, I would be happy to assist you.

Incidentally, Toad and others might be willing to verify that a game works in a MegaSTE before selling it to you. I have never asked them to do this, as I usually try to find out ahead of time before purchasing (via a post), but I think this would be a reasonable request for shelfstock. If they have to order the game for you, all bets are off.

> sector without corrupting the rest of the HD? Any help would be greatly
> appreciated. Thanks

Yup, though most of them require a bit of preparation. First, have you tried to boot up your hard drive software via floppy, and see if your data is still there? If so (and it is there), there is usually an option to just rewrite the partition information (you do have a printout of this, right!) or to reenable autoboot. This is definitely true of the ICD software. If you are using the Supra stuff, I think this is still true, but not sure. If you would like to post or email me a more complete description of your equipment and problem, I might be able to help you further. Please include exact versions of software used, TOS version, host adaptor, etc.

After you fix your problem, I suggest you purchase either ICD CleanupST or Oregon Research's Diamond Edge (preferably both). Both of these packages can fix corrupted files and disk structure, and allow you to save the critical information (bootsector, FATs, etc.) periodically to a floppy, so recovering from such a problem is quick and trivial. In addition, Diamond Edge has lots of other features (partition copys, defragmenting, etc. etc.). In fact, either of these programs might be able to solve your current problem, depending on your setup. The price of such software is quite small compared to losing all your stuff!

It is important to not modify the disk in any way until you know all of your options, as doing so might eliminate some of them!

Hope that helps.

If you are talking the accessories that have the extender .ACC as opposed to the more recent incarnation in the form of .CPX then there is an auto folder program that can be used that allows accesories to be loaded from within a folder (I think it was on the HENSA system file list).

If however you mean .CPX that have become more common in recent years with the introduction of Ataris xcontrol panel accessory and newer versions of TOS then these can be loaded from within any folder
you choose, there is a section in the xcontrol panel that lets you set the path to them.

If you are unable to find the auto folder program mentioned then come back to me and I'll dig it out from the cupboard full of floppies and upload it somewher for you.

Source record: 180700

I have downloaded the accessory Notepad v1.3 by Michael Zuhl of Germany. The original version (and all docs) are in German, but I liked the program so much that I translated the text in the accessory to English. I haven't seen this program on any libraries outside of Germany, and would like to make my "Englishised" version available. I plan on doing this by including all the original files, the English version of the accessory, and a small text file stating Michael Zuhl's copyright for both versions. Nowhere do I take credit for the program or ask for any money, and I state that the English version is unsupported by the author.

Does anyone know if this is legal? Better yet, does anyone happen to have an email address for Michael Zuhl so I can get in touch with him and ask his permission to post?

Thanks,
Tom

I just did the same thing, and the game now works fine on my Mega2. Thanks
much!

I will be taking up the MegaSTE problem with the Bitmap Brothers. Maybe
I can convince them to release a patch program, or special loader for
MegaSTEs (here's hoping). This game looks a LOT better on an STE, so I
think it is worth the effort to try. Anyway, I'll post if I am successful.

Uwe,
Apart from supporting GCC what other benefits does outside 3.3 offer
over previous versions? Also what is the easiest way to upgrade (I have 3.10) ?

Hello,

I recently bought a digital 500Mb hard disk for my TT. When the drive is
connected I loose 4-5Mb TT-RAM space. This is not dependend on the
partition scheme.

When I disconnect the new 500Mb drive and leave the 240Mb drive installed,
I stil have 9.5 Mb out of 10Mb free. With the 500Mb drive, it decreases
to around 5Mb free out of 10Mb. This is absurd.

I am using AHDI601 which has not give me any problems so far...

Can anyone shine some light on this problem and how to solve it?

Marcel.

>originally would have been fine. Your reasons sound fair enough.

>Try writing to the company, asking if you can return the original manual
>in return for a new one....

That wouldn't work. If I were to send for a new manual, it would have to
be of better quality than my old one. And I mean a spiral bound manual.
Otherwise, it will also wear out. Thats why I wan't PhotoCopies, so I can
three hole punch it and then put it in a three ring binder. My manual is
some where between falling apart andusable. If I were to photocopy it, I
would photocopy the whole manual. I would have to lay it flat with the
pages open for the entire manual which would probably further damage the
spine. I wan't photocopies so I can save whats left of the manual. Someday
I might wan't to sell my copy after I tire of playing the game, but nobody's
going to want to play such a complicated game without a manual.

Kinda...

> I have a unregistered version of v1.1, and the docs refer to the
> fact of the author working on a vastly imporved v2.0. Does anybody
> know what is happening?

Damien now has a "real" job programming for (ugh) PC's. The work is more lucrative than the Atari shareware market and takes up more time, but the truth is that he'd _rather_ be programming for the Atari. The greater truth is, he also must eat. :)

As for when SL 2 might come out, your guess is as good as anyone's right now. There's at least one PC and one Atari project ahead of any other work right now, with at least two other projects (including SL 2) waiting in the wings after that. Obviously, the well-paying job is going to take precedence, with Atari projects being done as time allows.

> Does anybody else have a later version than 1.1?

I believe if you register, you will receive version 1.11, which contains some bug fixes and minor feature upgrades. I highly recommend registering, along with sending a letter of support to Damien, if you'd really like to see a new version of Sound Lab, or any of the DMJ products. The more folks he knows are out there and willing to support, the easier it will be for him to justify using his free time to work on Atari projects!

Is there anyone out there using this gcc shell??

I have it installed on my system, with all the paths set etc. BUT on compile, no .o file is written, in fact, as far as I can see, it's not posible to get .prg file out of it in any way.

The hard drive whirs alot and after 5 or 6 seconds, the message 'Compiler Returns 1' is displayed. Occasionally, a ????????.o file gets written to the drive but this is 0k long.

Anyone any ideas - i'm loathe to use a cli to run GCC.

Thanks,

Steven.

>> >does not boot at all on my MegaSTE. It boots on my Mega2, but is somewhat
>> >flaky about loading files from the second disk.

The problem I had with the disks are that when it tries to load a new level, it sometimes says something along the lines of this is the wrong disk, try again. After several more attempts it usually works. The game does not bomb out at all with this problem. This is using a 2.5 meg STFM TOS 1.4. I don't *think* it is a disk problem as it isn't the same part that goes wrong every time. Sometimes it would work perfectly first time.

>> >If the commercial version doesn't boot due to copy protection,

>work.

I don't blame you. (note the smiley above!)

I am not sure what stage it gets to when I try it on my Falcon. I will check again.
If companies must protect their games, why not just use a random word out of the manual, rather than physically protecting the disks? Surely this would be harder to bypass, and if you have a large enough manual, you will have plenty of words to choose from :)

Phil

Simon Haynes (simonh@perth.DIALix.oz.au) wrote:
: My wife, Josie, has an old 386 and a 2mb STe. She uses the 386 for
: programming (20%), and the STe for everything else (80%), including games,
: art, word processing, DTP, etc etc.

: Question is, has anyone seen or used the Gemulator card? She's
: thinking of combining both her machines into one box (a 486), so that
: she can clear some desk space.

: Like I said, she uses the ST 80% of the time, so it's important to her
: that as much stuff as possible works on the Gemulator.

: We still have a 4mb STe (my machine), and we're right out of bench
: space! Imagine a small bedroom with two desks along one wall, with
: FIVE monitors, two external disk drives, a modem, two printers, a
: handy scanner, my 210mb hard disk, a megafile 60, a Supercharger, and
: other assorted bits and pieces all in a space 3 metres wide, and you
: start to get the picture...

If I were you I might consider going the other way. Gemulator is good for
apps, but it does not play games well. And if the software uses hardware
tricks instead of OS calls, there is a good chance it won't work.

Why not get a 4meg no hard drive Falcon. Use your 210mb hard drive on it.
SCSI? plug it in the back.
IDE 3.5"? Then, get the third party cable or box, that allows 2.5 to 3.5 IDE
hookup. You can use the VGA monitor from the 386 if you wish.

Also there will be soon Falcon Speed 486 card available. There is already
a 286, that seems as fast as a 386 (as far as video).

>his permission to post?

As far as the 'legality' issue goes, it really depends on what rights are
claimed by the author and what statements of license, if any, accompany his
shareware program. Some authors include a statement which says "No changes
may be made to the program or its documentation without the written consent
of the author" or words to that effect.

But -realistically- speaking, the author should be tickled pink that you
liked his program so much as to do a free translation. You appear to have
covered yourself well by not taking credit, asking for money, etc. I'd go
ahead and post it but still try to contact the author for permission. You
are doing him and the Atari community a favor, after all (Thanks!).

Cheers,

-Hutch- @ Fair Dinkum Tech

HELP !!!!

I try to format a Quantum 425i S SCSI disk in my MEGA STE but HDX
just won't :-(("check your connection and try again")

FHDX will format it, but only makes 4 partisions og max 32 Mbyte
(and that's only 128 MB of the whole 425 Mbyte !!!)
Supra harddisk formatter has more partisions but each is max 16 Mbyte

And if I try to repartision the disk with HDX after formatting with
FHDX or Supra I only get a "error in boot-sector - reformat disk" !

Everything works great on a TT - but I don't have a TT....

Does anyone know what to do (anyone from Atari out there ?)

3787. $RANDOM environment setting

Newsgroup: comp.sys.atari.st
Date: 1994-09-14 16:47:58 UTC
From: troyc@bnr.ca
Message-ID: <3579fu$907@bmerha64.bnr.ca>
Source record: 180613

I was playing around with trn and Pnews last night. I created the following directories for outgoing news articles:

/usr/spool/news/outgoing

Using Pnews I posted to a newsgroup called "local.news". Everything worked fine, but in the above directory, the article was in a file called "a". I looked at the inews script (I guess that's the one) and saw that it was CATting the article to the file a.$RANDOM

Now, since it was in a script, then it was supposed to append what I assume is a random number defined by the environment varaible RANDOM. Where does this variable get its value? Currently there is no value for it, which is why the article is coming out as "a".

Looking at the local system, I see that inews is a program, not a script.

Has anyone got any kind of news to work? How did you set things up?
If not, then why bother porting trn in the first place?

Currently I am only looking to have news post on my local machine and have the local users be able to read it. Later, when the PPP drivers for Mintnet are done and I can hook up to my workstation from home, then I will want a newsfeed to the outside world. I just want to get this working first.

From: troyc@bnr.ca
Message-ID: <3579pc$95n@bmerha64.bnr.ca>
Source record: 180614

Are there any mail programs for MiNT? I have elm, but there was very little documentation on how to set it up. Plus, I don't have any kind of sendmail program. I don't know the spool directory structre, read/write permissions, or anything like that.

I would like to be able to send email to other users on my system, and have it report if they have new mail or not at login time.

So has anyone done, or is working on, any of the unix mail utilities?

By the way, has anyone else had problems with CRON not working lately?

: Ist there anybody with experience with LINUX for ATARI ?
: How much memory does it need (on harddisk and in RAM) ?
: Ist it fast enough to run on an old ATARI MEGA ST 4 ?
: Are there any problems to install the kernel ?

I have no experience with LINUX but I read

maus.os.linux68k

on a regular basis.

Linux needs (and will need in future releases) at least
a 68030. (The 68881/2 will no longer be needed once the
emulator is written)

It does not work with the ACSI now but someone is working on it.

It will work with a PAK/3 (030) some time in the near future.
(That's what I'm waiting for)

The currrent release 0.9pl 2 seems to work on TT and Falcon.

3790. AT/IDE interface for the Atari ST

Newsgroup: comp.sys.atari.st
Date: 1994-09-14 18:03:00 UTC
From: samuel.arvidsson@p13.secom.ct.se
Message-ID: <2e775510@ct.se>
Source record: 180597

All the information is obtained from Chara' Data AB in Sweden.

The adapter is a little circuit board that fits on the CPU and it has a socket where you can fit TOS 2.06 ROM's (which works on the ST!).
It handles 2 IDE HD's.
You can have an internal 2.5" HD or an external 3.5" HD (internal in the Mega ST). The adaptor works fine even if you already have an HD in the DMA port.
Included in the package is SCSI Tools Jr 4.xx which handles ACSI,SCSI and AT/IDE drives. The adaptor can be used in a ST or a Mega ST. It does not work on STE.

Here is the prices (in SEK):
AT-BUS 2.06 card 995:-
Mounting-kit Mega ST 3.5" 295:-
Cable for internal 2.5" HD 195:-
Cable for 3.5" HD 179:-
TOS 2.06 ROMkit (swedish ones!) 695:-

About 7.2 SEK is 1US$ and about 11 SEK is 1 pound..

Thanks to you and to the netmail posters of the mail I recieved regarding my inquiry as to the whereabouts and/or existence of Chinese language software. I sent a Netmail to Hartmut, and hopefully he's still at the same address!

Again, if anyone knows of any Chinese (Mandarin) language software such as word processors, or text editors, or flash cards or anything that would help one learn the language, I'd be interested to know whats out there and where I could find it! Thanks again!

> three hole punch it and then put it in a three ring binder.

Ben, why don't you just take it to a copy shop, have them drill it for
a spiral binding, install such, then make a photocopy of that? Yes, the
spine will crack and separate when you do it, but the spiral binding will
hold it together (and in fact give you what you wanted in the first place).
I have repaired several old manuals this way (or retrofit them with spiral
bindings, so they would lay flat). I did it by cutting the spine off the
manual with a bandsaw, then having spiral bindings installed as described
above (this removes only a tiny amount of material from the document, thus
preserving all the text and such). The same thing could be done with a
large capacity paper cutter (a common piece of equipment in copy shops).
Fixing such a document is trivial and inexpensive (I don't think I have
ever spent more than $5 or so, and that is probably how much it would cost
to photocopy). In fact, most copy shops list "rebinding" in their "We can
do this" lists.

Good luck.

3795. Faster Than Light

Newsgroup: comp.sys.atari.st
Date: 1994-09-14 18:57:26 UTC
From: Max.Denebian@p480.f318.n105.z1.fidonet.org
Message-ID: <779589040.AA01059@jina.rain.com>
Source record: 180645

I've dialed into Faster Than Light and Interplay, their marketer for the sequel to Dungeon Master, Dungeon Master II, Skullkeep. First the good news.

SKullkeep will be released in time to fill everyone's Christmas stocking on the PC on disk and CD rom. The Amiga version will follow afterwards.

Now for the bad news.

Interplay says they have loads of Jags sitting around, but are not marketing any titles that the 'producer' named 'Fergus' I talked to knew about. Hmmm. He says they use them to look at games with.

Will Interplay be releasing FTL's Skullkeep (DM II) on the Jag? Fergus didn't know, but says as far as he knows, he doubts it. Something about the 'restrictive licenseing agreement from Atari'. He wouldn't elaborate on that one.

The title is already released for the SEGA market in Japan. So if you know anyone in Japan, there you go. (Let us know if it's any good!)

Also contacted was Faster than Light, and as per their modus operandi,
I couldn't get past the front desk lady. No matter WHO I asked to talk to, or how much I pleaded with her to let me speak to 'THEM' upstairs, (THEM being the software programmers, apparrently FTL is pretty small), THEY were
unavailable. How come, I asked? Well, one of THEM is in Norway on vacation (undoubtedly spending the profits from DM I!!), and the other two
(of whom she knew of) were out to lunch. They work late, she said. I looked at my watch and it read Three O'Clock. Hmmm, late lunch? Oh yes,
they work very late. Mayby if you call back in an hour??

But I did get her to be as non committal as she could as to what other platforms the program would be forthcoming. She admitted to the PC, the Amiga, the Mac, and would not rule out the Atari Jaguar. (Call back in an hour, and mayby you'll get lucky enough to talk to one of the
programmers.)

So there you have it. FTL still as non-committal as they can be, and still using the receptionist as a customer relations executive. It's quite exasperating... I'd think they'd either let us know they have no interest in supporting the Jag, or they'd go out and develop for it.
It's always a bit hairraising when I see a company which us Atari people made loads of money for, turn their back on us, and feed their talents towards the lucky Japanese... (or for that matter, the PC world...)

Try copying the second disk onto a fresh floppy. This fixed all of the
problems I had with the second disk. My boot problems with the MegaSTE
are still there though :-(.

> If companies must protect their games, why not just use a random word out
> of the manual, rather than physically protecting the disks? Surely this
> would be harder to bypass, and if you have a large enough manual, you will
> have plenty of words to choose from :)

My guess is that password protection is easier to crack than weird physical
format protection, using one of those magic "stop the program anywhere and
inspect memory" cartridges. Some of the physical format methods actually
require special equipment to create (like Mac variable speed drives), and are
therefore harder to duplicate. It might also be an attempt (a twisted one,
IMHO) to make things easier on the user. Anyway, I would sure like to see
password protection used more, so I could install some of the bigger games
on a hard drive. Too bad hard drives were not standard equipment right
when STs came out, as this would probably have encouraged such an attitude
with the game writers. That's what we get for being on the cutting edge
in 1985, I guess :-).

This is not the right place to ask questions about the cracked Spectre
versions out there (those that have the Mac ROMs contained in disk files,
with cracked Spectre software). I suggest you call Apple, describe what you
have, give them your name and address, and wait patiently by the phone for
awhile. With any luck, they will be very enthusiastic about contacting
you.

This is a combined reply to the articles by Barry Wilson and
Gert van der Knokke.

In article <Cw1E4B.Bp1@cix.compulink.co.uk>,
BARRY WILSON <wilsontjb@cix.compulink.co.uk> wrote:
>IIRC an updated version of ratehd was released earlier this year.

Where can this be found? Is it commercial?

>Do you have termination resistors fitted to the external drive?

Yes, and see below.

In article <...>,
Gert van der Knokke <gert@ttgk.textlitho.nl> wrote:
>Maybe the cache of the drive is confusing ratehd ?

Yes, I assume that can explain the slow times. It can't explain the weird
differences in access times when using different graphics modes, though.

>What kind of cable have you used for the SCSI ? If it's fairly long try a
>shorter cable, maybe the drive doesn't have termination resistors fit or
>parity is active (although this should give far more errors I think)

The cable is not long at all (it was ment to be used in a tower I bought
recently, but so far only the HD is in the tower).
The terminators are in place and parity works fine.

>I'm not sure about BlowUp Hard II but if it changes the bus speed it could
>cause trouble.

BlowUP does not change the bus speed, but it forces the graphics chips to
use more of the band-width. This is what I think is causing the problems,
but I've not heard from anyone else who've had problems.
Could the hardware bug that normally involves sound DMA have something to
do with my problems perhaps?

Are there any other BlowUP users with fast SCSI drives around?

I ran my test program a hundred times in a monochrome mode with no errors.
I've also copied hundreds of mega bytes around in the same mode without
any problems. If I use my normal 1008x608x16 mode, I get _one_ word error
somewhere in the first (of 75) mega bytes my test program reads. In another
mode (256 colours) I get 15-20 errors, also in the first of 75 Mb read.
The errors don't occur every time I run the test program. More like 40% of
the time.

I can't be the only one with these problems, can I?

> You need the current version 3.3 of OUTSIDE to work with GCC, at least
> if you use MiNT and MinixFS. 4 MByte are enough, OUTSIDE works on
> all machines with at least 2 MByte RAM and MC68030.

Has anybody with a 4MB 68030 machine *actually* run GCC under MiNT with
VM successfully?

When I asked this question a couple of months ago I could not find a single
person who actually ran this configuration. People either had more than
4MB of memory or weren't trying to use GCC/MiNT in the first place. ;-)

(or in one case had the above configuration but couldn't get it to work)

Thanks

Roland.

> 'Compiler Returns 1' is displayed. Occasionally, a ????????.o file

Well UNIX style programs should return 0 for successful completion, so I
was presume that GCC can't find some of its files. Possible due to
environment variables not being set up correctly?

> Anyone any ideas - i'm loathe to use a cli to run GCC.

I don't use this shell myself. In fact I'd be loathe to use anything
other than a CLI with GCC!

:-)

3811. Need advice on replacement drive for SH204

Newsgroup: comp.sys.atari.st
Date: 1994-09-14 23:52:14 UTC
From: dunham@mpd.tandem.com
Message-ID: <1994Sep14.235214.18405@integrity.uucp>
Source record: 180577

Yes, I have one of those really ancient critters, the famous Atari SH204. When I got it (from someone on the net), it still worked, although he told me it was potentially flakey. Well, now it's nothing but a pile of flakes. Since it appears to be the drive itself that's died, I have hopes of just replacing it and being back in business. With luck, I'll be able to turn this drive over to my son for use at college.

The questions: What must I look for in a replacement drive? My understanding is that the SH204 uses an MFM drive, and small ones are occasionally available Real Cheap. I've also recently seen a 140 MB Maxtor for sale on the net that was represented as MFM. Is there a limit to what the SH204 can handle? Is there some other question that I've forgotten to ask that'll bite me if I don't?

AdvTHANKSance,

3812. Re: Chinese

Newsgroup: comp.sys.atari.st
Date: 1994-09-15 00:48:10 UTC
From: Lexicor@world.std.com
Message-ID: <Cw5BKA.9uB@world.std.com>
Source record: 180571

I would be very interested in knowing what tools there are for Chinese writing, I didn't think that there was any for the Atari ST. The real problem for chinese writing word processors is that you need to make a whole new "Chinese TOS" or a separate program that will write Chinese using a regular Keyboard. Just Chinese "fonts" will no be enough to write anything as chinese doesn't work on an alphabet type system.

If you just want certain fonts for dtp or graphic purposes I suggest you scan them or paint them on the atari. For DOS the "ET" package is very good.

Cheers

Yat

>was CATting the article to the file a.$RANDOM

$RANDOM is not in sh or csh, only ksh and bash.

I can't see why anyone would use it like the above, because for example:

```
echo "foo" >a.$RANDOM
rm a.$RANDOM
```

Will use different random numbers for each case, thus not removing the file!

AFIK any MFM drive will work. With the SH204 you are lucky because this should have a sepparate ACSI to SCSI adapter and the Adaptec SCSI to MFM controller. Though you may remove the Adaptec MFM controller and plug in a SCSI drive. (In this way formating the SCSI may not work but SCSI drives are preformatted these days.)

You need OUTSIDE 3.3 if you want to run MinixFS on partitions with a sector
size of more than 512 bytes. There were some other changes, too but I can't
remember them all right now. There is also a new version of the HDDRIVER
hard disk driver software included in OUTSIDE 3.3.
The easiest way to upgrade is to ask you distributor about it, Lexicor I
guess.

The multi-tasking progeam Geneva is _supposed_ to work even with TOS 1.0 cpu's. As a Geneva owner, I can assure you it works well for me, but I have TOS 2.06. You could of course get T2.06 for about $150 from Wizztronics with the roms, but I think your biggest problem will be free ram. You'll need more than 1 meg to get the most out of your Midi programs and _any_ program that permits multi-tasking (Geneva, Magix!, etc.). It's often a better plan to buy a used cpu than to upgrade both ram and TOS. I recently got a 4 meg T2.06 1040ste for a friend for only $275 from Rising Star Computers. That's way less than the cost of both upgrades and it was clean!

breakingly close to being understandable (sigh).

3826. Will I ever get SpeedoGDOS 5.0b??

Newsgroup: comp.sys.atari.st
Date: 1994-09-15 10:17:30 UTC
From: oberle@informatik.uni-koblenz.de
Message-ID: <3596vq$k3f@newshost.uni-koblenz.de>
Source record: 180505

It seems that COMPO doesn't want to support their customers.
Four weeks ago, I called them in Aachen (D) and asked whether
they could send me the newer SpeedoGDOS 5.0b as a replacement
for my 5.0a that doesn't run under MagiC. "No problem", said
the man on the phone, "you'll get the new version for free."

He also agreed to send back my old original 4.2 diskette that
I had to send to them as a proof of purchase (I bought an
update 4.2 -> 5.0). He only asked me to write a letter once
more which I did right away, on the same day.

After three weeks, I sent them another letter to remind
them of their promise. But nothing happened and now I'm
still waiting. I ask myself whether this is their new
policy to keep ATARI users from changing to a MAC or PC.

Is there anybody who has made comparable experiences?
Or does someone here already have version 5.0b?

Regards,

Christoph

I'm guessing you mean the colors and object shapes.

On newer machines with XControl you can change the window colors with
Atari's own window color utility. With Geneva, you can change any of the
3D look (including turning it off if you want). Mostly the limitations on
what you can change are operating system based (does the AES support
changing those items). NeoDesk 4 will either use its default settings of
whatever the AES asks it to do.

HI Lars I have a MEGASTe 4/50 and the guys in Perth Western Austrailia had trouble putting a larger HD in it when i purchased it, in the end we gave up. Irecently was talking to them about the fact that Ishar II would work of the HD on a TT but not on the MSTe and was told that that was because the MSTe is (internally) NOT FULLY SCUSSI COMPATIABLE. So what does it all mean, well, it beats me. I have given up and purchased a second hand Megafile 30 which i intend to up grade with a SeQuest 105 removeable HD. The only thing i can suggest is to purchase an Atari Compendium and see if the info in there will help, but it is a lot of money for a pig in a poke.

Anyway hope that helps.

You could try using DVIPS to produce a postscript file, then use Ghostscript (available on a.a.u.e.) to preview it. Not the fastest solution, but it will work and should be reasonably accurate.

h but.....The Falcon can handle 1200 X 900 no prob on any joe-schmoe SVGA monitor (with Screenblaster or Blowup or whatever, all rather cheap add-ons). And the Falcon can do it with color. I use a rather nicer resolution of 1200 * 700 with 4 colors for DTP work.

So I don't see why that was brought up as an arguement against the Falcon, as the Falcon is clearly superior in this category. Of COURSE it isn't as fast, but I THINK that's the only advantage of the TT (that and maybe the VME).

Is there any tcp/ip package for the Atari (commercial, shareware, pd, or whatever)? If yes, is there any PPP or SLIP interface software for it?

Regards,
Ignatios Souvatzis

I've got 3 monitors I wanta sell here....

#1) A "14 SVGA Mega-Image. Nice Falc monitor with all the adjustment knobs in front. Good for high-res.

#2) An SM124, Atari monochrome monitor. Paper-white screen, nice and crisp for DTP / word processing.

#3) An SC1224 Atari RGB monitor, really nice with the Jaguar or for true-color work.

I'll sell #1 for $200, and #2 & #3 for $100 each....
BUT, I won't sell any of them unless I can sell ALL of them....comprende?
cya!

Well, at least I have a theory.
Are you by any chance using cachexxx in your auto folder ?
The reason I ask, is because if you have very large sectorsizes (which
automatically shows up if you have big partitions), the cache will be very
big. If you have installed, say 90 cacheentries for both FAT and DATA, then
you will use (90 + 90)*clustersize bytes for the cache.
Now, if your clustersize is 32k, this will amount to approx. 5 Megabytes.

If this is the case, just rename cachexxx.prg to something less.
BTW: if I am not mistaken, cachexxx prints out how much memory it occupies
during initialization.

Hope this helps,
Erling

Source record: 180580

Incidentally, Toad and others might be willing to verify that a game works in a MegaSTE before selling it to you. I have never asked them to do this, as I usually try to find out ahead of time before purchasing (via a post), but I think this would be a reasonable request for shelfstock. If they have to order the game for you, all bets are off.

By the way, I have asked one retailer, to verify that the games he sells works on my Mega STe. The retailer is B & C Computer of Santa Clara, California. Since he's one of the few Atari dealers left, I don't want to flame him too badly, but whenever I ask if a game will work on my Mega STe, they tell me, probably, but they can't guarantee it, they won't open the box to check it on a Mega STe in the store, and if you open the box, you bought it. No returns. Therefore, I don't buy many games from them. Too bad. I upgraded my old 520ST for a Mega STe several years ago, and generally I've been satisfied, but it's a damned shame that I can't take advantage of one of the few features that Atari offers over the "competition," namely colorful, arcade quality games. It's nice to play around with a clever game program after a hard day of telecommunicating, desktop publishing, and spread sheeting. --Mark van Wyk

Following up on the private e-mail I got from you. The problem you were
having was because you need to place an extra copy of NEOLOAD.PRG in your
AUTO folder for this feature to work. This isn't explained in the demo
documentation, as we never intended it to be installed completely. This,
however, is explained in the documentation and is done automatically by
the installation program.

I was looking through some back issues of Antic and found one of their
old catalogs. In it was a device for the Cyber-series software called
cyber control which interfaced the ST with compatible sony vcr's
buying the five pin remote jack. did this device ever get produced,
does it work, and does anyone know where i can get one along with the
cyber-series software for my ST? any help would be much appreciated.
also, the stereotek glasses- i want a pair with LCS Wandereer and
shoot the moon... where can i find these?

thanks in advance

Hmm...I'd try ftp atari.archive.umich.edu --or-- ftp wuarchive.wustl.
edu

I don't think the STE_FIX.PRG brings the OS up to 1.62, it just fixes
the boot-into-low-rez bug that 1.60 has. Good luck! If you still
can't find it there, mail me back & I'll send you a uuencoded copy
of the prg .

From: patrick@nightingale.nurs.utah.edu
Message-ID: <35a46c$8qu@u.cc.utah.edu>
Source record: 180581

Recently a number of Items of Atari software happened
my way at an IRS auction and I would like to sell them.

The "S" under "MISC." means they are still in shrinkwrap.
The number beside it is the number of copies I have as
of 9/15/94. Also, the Calamus program was in shrinkwrap
but I removed it to see why it cost so much. (Still not
sure why it does. :-) Maybe someone can clue me in on that
one.

I haven't put in a lot of info on these because I have
no idea what the response will be. If you have questions,
please ask.

Highest reasonable offer takes item/Preference to buyers
of multiple items. The way I'll do shipment is to charge
the price of the product plus whatever shipping is negotiated.
When the check clears I will ship the item/items.

Reply to patrick@nightingale.nurs.utah.edu and make me an offer.

3848. SC1224 for cost of shipping

Newsgroup: comp.sys.atari.st
Date: 1994-09-15 19:43:14 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <35a84i$nrj@mailer.fsu.edu>
Source record: 180587
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I have an SC1224 monitor that I am willing to give to anyone willing to
pay the shipping to get it to them. The only catch: it doesn't work!
It is in great physical shape, and had a very nice picture when working,
so I hate to just throw it away. It does not come on at all when power is
applied (no hum or anything). It could be something big (like the flyback),
or it could be a loose wire or other trivial problem. Heck, it would make
a great aquarium for some enterprising Atari fanatic.

If anyone wants to tinker on this beast, or just needs it for parts, send
me some email.

> 2) Does anyone else out there have a similar system to mine? Do you

My system not all that different.

I'm using GCC 2.33 under MiNT 1.11 in a single full screen session. It works just fine. The shell I'm using is KSH 4.8.

Up until a few weeks ago my main system was a MSTE, and I had MTOS running with GCC using TOSWIN so I could have multiple shells in different windows. I've had this running on my TT, but haven't reinstalled it after I had a serious disk crash last week. Worked fine though.

The other option is to buy Lattice C. Hisoft in the UK are selling off old copies cheap. I bought a copy of 5.52 last year for 50ukps. It was worth it just for the manuals! The compiler is exellent, though I'm more impressed with the MiNT libraries for GCC.

My advice is to ignore Geneva for the moment and just concentrate with getting *one* shell session up and running under MiNT. Once you have done that, try the full MTOS with TOSWIN as your TOS window manager (much better than Miniwin IMO).

:-)

Roland.

>read in ST Format (I think) that this should work.

I called Microdeal soon after my cart arrived about this - they said I should try disabling mouse event reporting on the ikbd. (The noise coming out was like the sample plus 50-200Hz hum over the top.) I tried moving the mouse (using my existing 68k asm routines) and the quality dies a slow painful one, but running the routine at IPL=5 with all other MFP interrupts disabled didn't fix the problem, so it seems I'm interrupting at the wrong time also. (The sample DOES play cleanly through internal DMA.)

They really ought to have included source routines for this. If anyone has 68k assembler routines to do this, please post them, as the cartridge is next to useless to me unless I can figure out how to do my own I/O.

(Also, are Replay's own sample manipulations as slow as ****, or have I just been spoilt by all the 486DX66s at uni?)

3859. Printer redirector wanted

Newsgroup: comp.sys.atari.st
Date: 1994-09-16 04:19:27 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <35b6cf$e8l@mailer.fsu.edu>
Source record: 180504

Can anyone tell me the names of some programs that can redirect output
from the printer port to a file? Basically, I have a program that can
output PostScript, but only directly to the printer port (really dumb, that).
Anyway, I want to be able to get this into a file so I can take it to a
PostScript printer elsewhere.

I thought these were fairly common, but I could only find one on
atari.archive.umich.edu, and it does not work very well. The one I found
is called ICCA (I can capture anything, cool name at least). Any pointers
to such programs would be greatly appreciated. Thanks in advance.

The game is shareware, and the demo for it is not playable; it just sits there and plays with itself (ahem) for a while, but it won't let you have a go. You need to register for that.

Source record: 180523

I'm setting a BBS up in Hobart, Australia as there is almost nothing happening on the local Atari scene at the moment and I was wondering if anybody could recommend some good stable BBS software (either shareware or commercial). It must run on a Falcon and provide good security.

I've had a look at ST Keep v5.5 (or something like that) that I download from the umich mirror at wuarchive. It seemed quite nice but it won't enable anyone to dial in properly. The connections never seem to be made, even in the terminal mode. Is this because it is unregistered or doen't it like the Falcon? I wrote some mail to its programmer at his Genie address but received no response, does this mean he no longer supports it?

Any sysops reading this please post me some e-mail at my email address as I would be interested to heard what you think of your software (please include whether it is commercial/shareware, its distributor and cost)

Cheers,

Anthony Green

3868. DESKTOP/NEWDESK.INF file description and disection

Newsgroup: comp.sys.atari.st
Date: 1994-09-16 11:56:07 UTC
From: hopper_t@msupa.pa.msu.edu
Message-ID: <35c14n$p1c@msuinfo.cl.msu.edu>
Source record: 180527

Now available in comp.binaries.atari.st is what may be the most complete description of the DESKTOP.INF and NEWDESK.INF files ever published! I have compiled everything I've learned about the Atari desktop's configuration file into one text article that describes the function, structure, and possible modifications to the INF files. I describe the meaning and structure of the NEWDESK.INF file line-by-line, giving you a complete reference and the ability to modify the INF file at will! I have included tips and hints for modifying, including the do's and dont's. Finally, there is an annotated NEWDESK.INF, allowing you to see just how everything I describe may be applied.

If you want to get more out of your Atari Desktop, this file is a must! With the information contained within, you may never need to use programs like Maxifile, Ma Hubbard's Cupboard, or NeoDesk!

While I focus on TOS 2.06 and Atari's NEWDESK.INF file, almost all of the information is applicable to any version of TOS, from version 1.0 to version 4.0x! Configuring your desktop has never been easier!

Feel free to download this file, and upload it (in its entirety) to your favorite archives!

The file in comp.binaries.atari.st is a uuencoded zip archive.

Enjoy!

3869. TOS 1.0 problem and HD upgrade

Newsgroup: comp.sys.atari.st
Date: 1994-09-16 12:54:20 UTC
From: alkio@finsun.csc.fi
Message-ID: <35c4hs$m9k@pobox.csc.fi>
Source record: 180516

I have an old 1040 STF with TOS 1.0 (i think).
Well, isn't the ESC key supposed to update the directory when I have a
directory open on the desktop and change a disk in drive A? It doesn't seem
to function reliably. It often shows only the last disk that was in the drive
even if I change the disk and press ESC.

This in itself wouldn't be much of a problem but the same behaviour seems to
happen when I use my sequencer program and change the disk and try to update the
file selector box.

Is this a known bug in TOS 1.0 and if so, is there some fix for this?

Another thing. My disk drive recently broke down (r/w heads probably) and then I changed
it to a generic HD 1.44 drive. It does the job but I was wondering if anybody has
instructions
for a HD upgrade so that I could also use HD disks. I know there is a commercial solution
but I
think it costs probably a bit too much since I guess the parts I would require wouldn't
cost
that much (I guess a new floppy controller chip and a couple of resistors).

I would also like to know what is the cheapest solution to upgrade the memory since I only
have
1 MEG and would need at least 2 MEG. Here I am thinking of a commercial upgrade since it is
so
much hassle to do it self.

If you have any recommendations, please reply.

Thanks, Jouni Alkio.

This is a known bug in TOS 1.0. I have seen a fix for it, but I don't
remember the name of the program. It was, however, an AUTO folder program,
maybe by Tom Hudson(?). Hopefully, someone will know the name of the
program and be able to tell you.

As long as you're using TOS 1.0, make certain you also use the Folder Fix
program from Atari (FOLDRxxx.PRG); hitting the 40 folder limit in TOS 1.0
can cause directories to be scrambled. In later versions, the 40 folder
limit was just a feature, but in TOS 1.0 it contains a potentially
disastrous bug!

>Another thing. My disk drive recently broke down (r/w heads probably) and

Sorry, to use high density floppies, you need at least TOS 2.05 and the
AJAX drive controller chip. I don't think that such is possible with an
old 1040, though you might check it out. At any rate, the upgrade wouldn't
be at all cheap.

There may be a bug in TOS 1.0 that affects this, but it is also common on
other TOSs (I think it has more to do with your floppy drive replacement).
It is the media change problem. Your machine can no longer tell when you
have changed floppy disks, and gets confused. There is a program on
atari.archive.umich.edu that is supposed to fix this called fmc.arc (or lzh
or whatever), for Force Media Change. Also, you can probably fix it in
hardware. There are at least two files on a.a.u.e (ibmflop.lzh and
genflop.lzh) that talk about installing generic PC 3.5" drives in STs
without problems.

> Another thing. My disk drive recently broke down (r/w heads probably) and then I changed

There is a file called flop14.lzh (or something similar) on some of the
German ftp sites (I don't think we have it on a.a.u.e) that talks about
installing 1.44mb floppies on STs.

> I would also like to know what is the cheapest solution to upgrade the memory since I
only have
> 1 MEG and would need at least 2 MEG. Here I am thinking of a commercial upgrade since it

> much hassle to do it self.

A third party memory board that uses SIMMs is probably your best bet.
There are some good instructions on a.a.u.e on how to use 2 SIPPs, two
IC sockets, and some breadboard and wire (I think the file is called
2_5ramXXX.zoo, or something vaguely like that). I'm currently trying to

adapt these instructions to make a SIMM upgrade (it will use 2 SIMMs, a 2-place SIMM socket, and some wire, that's all!). If I'm successful, I'll put my version of the instructions on a.a.u.e as well.

Oh, you should definitely read these instructions, even if you end up getting a different memory upgrade. I learned quite a bit about how memory is set up in the ST from these instructions.

From: sccoe@ucscb.UCSC.EDU
Message-ID: <35cf2b$41v@darkstar.UCSC.EDU>
Source record: 180532

What exactly is this program supposed to do? I have it set up between the Falc and ST with the MIDI cables, but all I can do is send text messages back and forth (yee-hah!).

What are those A - B - C ... J boxes represent? What does read only/write only mean? How do I copy files across the network?
tia.

3876. B/W Video problems

Newsgroup: comp.sys.atari.st
Date: 1994-09-16 16:33:58 UTC
From: anmar@netcom.com
Message-ID: <anmarCw8E0n.AMw@netcom.com>
Source record: 180540

I have almost always had problems with using my B/W monitor
with my Atari 1040ST. The problems don't occur when I
use my color monitor.

Basically, the screen starts slowing going to inverse video.
The screen appears to shimmer as it is going through the
transition and sometime I can see a visible grid matrix on
the screen (maybe at chip boundaries?).

This problem has gotten worse as time goes on. Unfortunately,
I need to use B/W with the CUBASE music software I have.

Anybody else experienced this? Is there a quick fix like
giggling the video board? I guess there must be a seperate
board for B/W and color.

Any help would be appreciated?

>Also, is there a faq for csas, or some other texts on file formats, hardware
>ratings, etc., for the Atari line?

Well, it ain't particularly fast, though it was in its' day ... what sort of stuff does it run? Well, I use my ST for MIDI applications and nothing else, as software for doing anything else on it is a bit hard to find. It _is_ good for MIDI, though, and some of the best sequencers and ed-libs made are made for the Atari ... this is the only area where there is any market support as far as I know (actually I think there are some DTP programs for it as well that are pretty good).

As for utilities, check out CodeHead, Double-Click, Gribnif ... there were a couple Macintosh emulators for it (emulates a Mac Plus) though I don't know if those are still produced. In it's day, though, the ST was the first computer to emulate a Mac (and it did it pretty well, too).

As for hardware, it runs a 68000 at 8MHz. Graphics are lo-res (320x200) with 16 colors, med-res (640x200) with 4 colors, and high-res (640x400) with the Atari monochrome monitor (the color resolutions need the color monitor). The total color pallette is 512 colors (the STe does 4096 I believe). It has I think 3-channel sound mono (the STe I think is a 4-channel stereo machine, like the Amiga). There are some pretty cool games for the ST if you're into that sort of thing.

Actually it's a shareware multitasking platform. A demo version is
available at atari.archive.umich.edu. The good thing about OMen is that
there will be versions for atari, amiga and mactintosh => you're supposed
to run the same programs on all machines! The bad thing is that the GUI
isn't that good (in my opinion).

Wanted: Infocom Games

If you have or know someone who has these, let me know. They must be totally complete (ALL docs/stuff that originally came with them). The computer type doesn't matter:

Plundered Hearts
Nord and Bert Couldn't Make Head or Tail of It
Arthur
Shogun
Journey

Please send asking price, I'd rather trade for other software but may buy depending on the price.

3881. Re: Printer redirector wanted

Mickey Boyd (boyd@gauss.math.fsu.edu) wrote:
: Can anyone tell me the names of some programs that can redirect output
: from the printer port to a file? Basically, I have a program that can
: output PostScript, but only directly to the printer port (really dumb, that).

: I thought these were fairly common, but I could only find one on
: atari.archive.umich.edu, and it does not work very well. The one I found
: is called ICCA (I can capture anything, cool name at least).

These programs are not fairly common, unfortunately. The other one I know of
is Barrel, but it has problems handling large output (such as your postscript
file probably would be). I wrote an accessory once which did the same (and
worked fairly well with the old Tempus Word versions) but never did get past
alpha stage...

Are you by any chance using an ICD host adaptor in your hard drive setup?
If so, the problem could be the DMA cable connecting the host adaptor to
the computer. ICD gave away free cables that would correct this problem
when it first surfaced. On the other hand, I thought the problem was
localized to Mega2 computers. However, I could have misunderstood the guy.
The cables that caused the problems were the first run of the fancy ones
that have "ICD" molded into them, with the thumbscrews instead of actual
screws. The older cables (generic looking, real screws to fasten them to
the port nuts) fixed the problem right away for me. Hope that helps.

3883. Re: Noedesk 4 To Slow To Load

Newsgroup: comp.sys.atari.st
Date: 1994-09-16 20:00:43 UTC
From: wells_s@kosmos.wcc.govt.nz
Message-ID: <35cthb$a3u@golem.wcc.govt.nz>
Source record: 180546

] RS> Also the speed of loading is far to slow, it looks like I will
] RS> be going back to using NEODESK III, to me its far to messy,
] RS> far to cluttered...
]
] Doesn't seem to be too slow to load for me - at least, compared
] to the amount of time a Macintosh takes to boot up! Are you booting
] from floppy or a hard drive?

Good point! Even from a fast SCSI drive, most system 7 mac's I've seen take almost a minute to boot up completely. (And those with TSR's take longer!) :)

3884. Slip over MintNet

Newsgroup: comp.sys.atari.st
Date: 1994-09-16 20:13:15 UTC
From: David L Watson <dw4g+@andrew.cmu.edu>
Message-ID: <AiSTlPy00YUoA4qV5L@andrew.cmu.edu>
Source record: 180518

I'm trying to run slip using MintNet and I've run into some problems (big surprise!). I've run the test in the FAQ using udpprobe, and Mint-Net seems to be working fine.
When I run /etc/slattach -t /dev/ttyb -r hostname, it tells me:

ioctl (SIOCSIFLINK): invalid function number.
connot get interface name

What exactly does this mean?

I'm never quite sure that I still have my connection over the serial line. (BTW I basically have a straight serial connection to the network, no modem.) What can I use to basically just send stuff to and from the modem2 port, from within MiNT? All I need to do is send a few carriage returns and "slip" and make sure that it's getting received.
The other possiblity that I have considered is that something is wrong with what I'm typing in as the hostname. I've tried using the straight IP address of the host I'm connected to, but it gives me the same error.
Also, what do I need to do to set up the speed of the port? I've tried to set /dev/ttyb to be 38400 (using stty), but it won't let me do it. It works when I do 19200. (/dev/modem2 has been renamed to /dev/ttyb, so that shouldn't be a problem).

Thanks,
David

3885. Thanks for help on assembler: $70 VBI

Newsgroup: comp.sys.atari.st
Date: 1994-09-16 20:55:02 UTC
From: rrk@vixen.cc.bellcore.com
Message-ID: <35d0n6$aav@athos.cc.bellcore.com>
Source record: 180550
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Thanks much to all those who helped me with understanding
the role of register $70 in assembler for the ST.
As I now understand it, the machine on its own checks $70 every
vertical blank (it interrupts the current process to to this),
and goes to the address in the $70 register.
Whatever instructions are found at that address, the machine will
perform, and then discontinue the interrupt to resume current
processing. At least I think that is what is going on now.
This makes me wonder if there is a practical limit to the number
of instructions one can ask the machine to do during this vertical
blank interrupt. Anyway, I appreciate your help very much.
My studies continue. Now the ST Format tutorial is trying to
teach me why dividing the sprite frame number in an OCP Art
file by 16, and then multiplying it by 640 gives me a sprite.
Beats me. Anyway, I'll keep pondering. Thanks again for the earlier
help!

3886. Software for sale or trade

Newsgroup: comp.sys.atari.st
Date: 1994-09-16 21:28:58 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <35d2mq$5kh@mailer.fsu.edu>
Source record: 180520
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

For sale or trade:

Below are a bunch of ST items I want to sell or trade. For buyers, highest reasonable offer gets the item, with preference going to those that buy more than one item. Shipping will be negotiated with the offer.

As for trades, let me know what you have and we may be able to work something out. I am looking for some games (Vroom, Armourgeddon, Prince of Persia, Flight of the Intruder, and many others), Stereotek 3D glasses, working Wico bat handle or Ergo joysticks, European ST magazines (ST Action and ST Review particularly) and probably lots of other stuff. Cash can make up for deficient trade material from either party. Shipping will be negotiated with the trade (though for trades, I often suggest that both parties eat the shipping). Don't be shy, send me some email and let me know what you have to trade.

All of the items below are original commercial products owned by me. Unless otherwise noted, all original boxes, manuals, and disks are included. I have cheats for some of the games, and will include them with the sale/trade.

Please reply via email.

****Application and Utility****

Tempus v1.x, excellent text editor, not as good as Tempus II, but no slouch either. Blazingly fast (hence its name), even on a box-stock 8mHz system. Designed for programming, great for general editing as well.

Neodesk Command Line Interpreter, v. 2.0, adds a command line interface to Neodesk with MSDOS/UNIX style commands. More commands can easily be added (the GNU versions of standard UNIX utilities, for example). This version is really more MSDOS-like than UNIX-like, but the new version 2.1 (to which this can be upgraded) is supposed to be more UNIX-like. There are a couple of neat things about this CLI. First, it pops up in a window on the desktop, so a CLI is only a mouse click (or keyboard macro) away. One can drop batch files onto the CLI icon to execute them, which can be quite handy. Finally, it is quite small, primarily because it reuses the routines in Neodesk to do standard file operations (i.e. when the CLI copies a file, it uses the code already in Neodesk to do it). Only works with Neodesk.

Wordup v3.x, Neocept, with the large thesaurus and large dictionary extra options, plus lots of Genie notes about bug fixes and work-arounds. This is an excellent WYSIWYG word processor, but it does have some bugs. The rights to the code were purchased by Atari (and some of the code used in Atari Works, or so I hear). It is not buggy enough

to be unusable, just irritating at times. This is the final version
that was released.

TurboJet, Neocept, fast GDOS print driver for HP Deskjet and Laserjet printers,
includes a bunch of 150 and 300dpi fonts. Claims to be 200-500%
faster than other HP drivers (for that time, I don't know if there
are faster ones out now).

Microsoft Write for ST, buggy WYSIWYG word processor, the only Microsoft
product ever made for the Atari that I know of, includes a full
copy of Atari GDOS. Can be run from floppies and a ramdisk (Jeez,
did I really do that? I must have been really patient back then :-).
I managed to produce a bunch of papers and letters with it using only
a floppy and color monitor, so it is useful.

Personal Pascal, ICD, I believe this is the final version of this compiler.
The only limitation with it that I know about is that one cannot
pass functions as arguments. Other than that, it is a complete
Pascal compiler environment. The lack of this feature will not
hamper most Pascal programmers, IMHO. Good docs on both Pascal and
the Atari programming environment (it's a big fat softcover book).

CAD 3-D v1.0, Antic, original disk accidently laundered (don't ask :-),
includes original docs plus backup floppy. This is not really for
architectural design (i.e. Dynacadd or Autocad), but to make nifty
3D animations for fun.

****GAMES (Arcade Action)****

Alien Syndrome, overhead view scrolling shoot'em up, lots of fun for two
simultaneous players. Plenty of fast and furious shooting.

Captain Fizz Meets the Blaster-Trons, Psygnosis, sort of like a Gauntlet II
in space, best with two simultaneous players (screen is split to give
each player their own view). Overhead view, destruction galore.

Xevious, Mindscape, port of the stand-up Arcade game Xevious, vertical
scrolling "fly over the landscape shooting and bombing everything"
game.

Baal, Psygnosis, Excellent platform/adventure game (mostly arcade action).
Future setting, sideways scrolling, large sprites, good guns. This
is a pretty hard game, but lots of fun.

Enduro Racer and Crazy Cars, combo pack, no docs, Enduro Racer is a cross
country motorcycle racing game, Crazy Cars is a racing game. Both
are OK, though quite old.

Super Cycle, Epyx, no docs, oval track motorcycle racing.

Custodian, futuristic platform shoot'em up game, excellent graphics, fast
scrolling, lots of weapons, etc.

Eliminator, strange driving/shoot'em up game, lots of different weapons and bad guys.

Frostbyte, Starsoft, side-view platform game, I would recommend it for a small child (in terms of its difficulty). A bit boring for us big children, IMHO.

President Elect 1988 edition, SSI, presidential election simulation, graphics are quite lame (mostly text, in fact), but I suppose a political process fan might like it. It does not appear to be particularly tied to the 1988 elections, and has data for US elections all the way back to 1960. Can apparently be used to predict elections as well.

>as the Falcon is clearly superior in this category. Of COURSE it isn't as
>fast, but I THINK that's the only advantage of the TT (that and maybe the
>VME).

Because the TT has this standard, you don't need extra add-ons or
modifications. Also the TT is capable of displaying 256 real grey scale in
320x480, the Falcon can only do... Euhm. 6 bits per color that gives 64 :-P
(also not true, as not all colors have 6 bits so really 32...)
Some other TT advantages:
* Faster...
* Cheaper SCSI cables (Mac compatible)
* 32 bit Fast-Ram (and 64 bit ST-Ram)
* 4 serial ports
* Floating point copro standard (at 32 MHz)
* Better case, with detached keyboard.

So I'll stick with my TT for now, unless Atari brings out a Falcon 040 at
50 Mhz in a mini tower case...

Two freeware ones are MiNT-Net and KA9Q. There is at least one other
freeware one, and there has been a commercial one in the past.

MiNT-Net is excellent, but requires a lot of time and effort (not to mention
hardware) to set up properly.

KA9Q is an integrated package which is much easier to set up, but more
limited in what it can do.

Don't know anything about the other one, except there were D-LINK DE600
pocket ethernet adaptor drivers for it.

Roland.

>
>
>I can't be the only one with these problems, can I?

Nope, but I guess you're stretching the hardware to the limit, recently I
tried to upgrade a Falcon to 40 Mhz and although the manufacturer of the
kit never found a Falcon who wouldn't run at that speed, this one refused
to go at 40 Mhz. I modified the kit to 32 Mhz and it all ran fine. So by
speeding up the video logic it could be that the chip isn't releasing the
bus fast enough and 'contaminates' other memory (or DMA) operations.
Atari never designed the chips for higher speeds...

3892. Uniterm 2.0e015

Newsgroup: comp.sys.atari.st
Date: 1994-09-17 00:33:30 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <35ddgq$i1p@mailer.fsu.edu>
Source record: 180459
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have added a file in /Telecomm on atari.archive.umich.edu that has the instructions for downloading the last version of Uniterm, 2.0e015. This has been the final version for several years, but I'm sure most folks ended up with a previous one, as the author requests that no site other than the one mentioned below carry this last version. Atari.archive has the last version released for general distribution, 2.0e011.

So, for those that like Uniterm, and want to have the final version, it is on the machine chsun.chuug.ch in /software/atari/UniTerm. Please do not upload it elsewhere, as per the author's wishes (this paragraph is essentially what the file on atari.archive says).

I have been unable to get ahold of the author, Simon Poole. I would like to ask him to release the source (so someone could add Zmodem capability), or at least to allow atari.archive.umich.edu to stock the final version. If anyone has a current email address for Simon, please let me know.

For those that don't know, Uniterm is a telecommunications package that is particularly suited for UNIX connectivity. It does excellent vt100 emulation, and uses the full screen (with standard system font) for a large fast terminal display. It offers a powerful macro language, which can be used to automate tasks (or even to add Zmodem capability, in a fashion). Even after all these years, I would rank it very high in the list of ST terminal programs.

Mark,

Why don't you try ordering from STeve's? He is in Sacramento, so you
would have to mail order. . .but he provides MUCH better service than
B&C Computervisions. (I have dealt with both!!) STeve keeps an up to
date listing of what is compatible with what, and he does extensive
testing (ie, he tests everything!) and he ships everything out priority
mail. STeve will be happy to bend over backwards to help you out,
while B&C won't. I used to go into B&C all the time when I was stationed
at Moffett, and I have never been impressed with their knowledge and
attitude to their customers. Call STeve at 1-800-487-7783. You won't
regret it!

3898. Gemulator help

Newsgroup: comp.sys.atari.st
Date: 1994-09-17 08:05:44 UTC
From: simonh@perth.DIALix.oz.au
Message-ID: <35e80o$442$1@perth.dialix.oz.au>
Source record: 180463

Thanks to everyone who replied to my original Gemulator query. I know this is a cop-out, but there were too many replies to respond to individually!

We've now bought the Gemulator, but (here's the crunch) I figured we could use a 2-chip set of TOS 1.62 out of a dead STE. Has anybody managed to get this particular TOS set going? The PC keeps looping, showing two, three or four bombs after accessing the floppy drive and hard disk.

It doesn't say in the manual whether TOS 1.6 works with Gemulator.. maybe there's a conflict because the STE has extra hardware that's not being emulated.. who knows?

CHeers,

SIMON HAYNES

There's is a CPX (german ofcourse) that is sort of "all your printer needs".
It includes spooler etc. and it can also redirect output to any file you want.
I have tried it from Calamus and it works fine.

It's called Spooler CPX (or something similar) and it's from AsM.

The version at a.a.u.e is v2.46, and the one at hensa, I have 2.46 and
v2.50

v2.50 I could not get to work on my STe or the Mega at work, however,
it is supposed to work on Falcons and TTs as some people who downloaded
it told me. v2.50 is also a lot nicer looking than it's older
companion.

Watch out for v2.53 soon...I will be getting it from Genie soon...when
it is uploaded...or any later versions.

BTW, you can get the files in the paths:

micros/atari/tos/n/n190/omen246d.lzh and some text files
micros/atari/tos/o/o097/omen250d.lzh

Funny how the versions are numbered.....the number of times the
programs are compiled ot something....ie, 246 times, and 250 times...

Have fun..

Max bibbled on 14 Sep 94 to All...

>> Are any of you playing this excellent RPG? I'm rather stuck ATM.
>> I've discovered quite a few levels and mapped most of them but a few
>> places are still closed to me.
>
> I'd like to be playing it, but the copy one of your across the pond
> pals sent me won't work on either of my computers. And to top that off,
> I lost the envelope he sent the disk in, and couldn't properly thank
> him! Of all the luck...

Hmm. Well, the docs do say that it works on the TT and (I think) the Falcon too
but I think the compression method used doesn't like it. For faster loading I
unpacked the prog and it went from 220k to 580k in size. :) If you want I can
send you the unpacked version....

> How do you find the time to play all these games, Col?? And how far
> did you get in Frontier? You ever figure out how to get those HUGE
> ships ya always see docked around the space stations???

Simple: due to unemployment (the big U) I've got tons of time on my hands. I'm
doing various courses etc to keep my mind occupied but I've still got lots of
time to, er, waste. :)

I've given up with Frontier for the time being. I got seriously bored since the
Feds wouldn't promote me any further and doing the same missions over and over
again is really yawn-time.

Try with ICD programs insted. Or maybe a newer version of AHDI will be able
to do the job, as i think the 32Mb limit is a pretty old limit, which has
been changed. But since i don't normally use AHDI to format/partition my
harddrive, i'm not sure about that.

What about NeoDesk's CLI. I have been using this for quite some time and I am
quite happy with it. I believe it's about $30 U.S. It takes both DOS and Unix
style commands, does batch files and assorted other things. If you want more
information feel free to mail me.

: is called ICCA (I can capture anything, cool name at least). Any pointers
: to such programs would be greatly appreciated. Thanks in advance.

You can try out Multi Shen ,which should also be avaliable from a.a.u.e.
in the Utilities folder. It only works on 68000 machines ,so of no use if
you use a Falcon or TT.

: What are those A - B - C ... J boxes represent? What does read only/write
: only mean? How do I copy files across the network?

There is an inproved version of LittleNet around, called astoundingly enough, MediumNet, with various improvements like allowing you to save your defaults. I haven't used either (just taken a cursory look) since I don't have two ST's to network, but the letters allow you to set up the network so that you can access the other machine's drives (Slowly.).

On 16 Sep 94 at 16:33:58, Anthony did truly state.....

AM> Basically, the screen starts slowing going to inverse video.
AM> The screen appears to shimmer as it is going through the
AM> transition and sometime I can see a visible grid matrix on
AM> the screen (maybe at chip boundaries?).
I had this exact problem on my STFM. A long journey in a car fixed it so it must be a loose chip. Try checking the Shifter, MMU, Glue and possibly even your TOS chips. The MMU and Glue are the hardest to check as they are in those square chip packages.

From: Stephen Haynes <mountainair@delphi.com>
Message-ID: <ZcwwPfe.mountainair@delphi.com>
Source record: 180454

LitleNet was my first exposure to networking on the Atari computers.
it's a simple program that works almost intuitively. The catch I believe
is that you must install a desktop "Drive" icon. This icon represents the
network drive you are accessing.

LittleNet will only access one icon, which is why the accessorie has the
selections.

EX.
From the ST select "c" in the accessory. When you click on the network
drive you will see the contents of the Falcon's "C" drive.

Now select "A" on the ST accessory and when you select the network drive
you will see the contents of the Falcon's "A" drive.

From your message it seems that the acc. is installed correctly and you are
using 2 MIDI cables, since you recieved messages.

To access the ST from the Falcon, follow the same procedure.

The read and write properties are referred to as "rights". Each computer
has the right to grant reading and writing access independently.

This LittleNet is a wonderful quick utility that I carry always. The speed
of transfer is approx. equal to floppy access. This acc. works with a max
of 2 Atari computers. There are other larger group networking programs
but this one is the most userfriendly.

I hope this was helpful.

~Stephen

] I Use Neodesk 3.04 with Geneva. They work perfect together...
] I don't know about Neo V4 but i 'll buy it soon. I saw the Neodesk 4 demo a
] it was really amazing..(i noticed about the load delay you mention in your
] letter). Tell me..the background file operations, worked allright with
] Geneva?? Are they fast enough with a simple ST? or they hook the whole
] system??

If you set speed to minimum, then the system is still usable, but copying
etc. takes around 10 times longer than usual! :)

Setting it to the 1st from the left on a Falcon copies at a good speed,
and doesn't noticably slow the system down.

(I've got my dialogs set to _not_ appear in windows so that they are
purely single-tasking and get the job done at max' speed!)

3921. GOOD OLD ST SOFTWARE FOR SALE!!

I am selling all of my old ST software that has been taking space in my garage. I hope someone will find this stuff interesting. I will sell it cheap, but I would like to sell it all as a group if possible.
These are original disks with original packaging and docs:
Bubble Bobble (the finest game ever written IMHO), Speedball, Double Dragon, The Great Giana Sisters (a Super Mario clone that was banned), Tetris (Mirrorsoft), Star Trek-the Rebel Universe, ST Karate (triangle shaped box), Indiana Jones and the Temple of Doom, Gauntlet, Dungeon Master (way ahead of its time), Mudpies (one of the first commercial ST games), Trinity, Moonmist, Mindshadow, Sundog, Winnie the Pooh, Donald Ducks Playground, Degas Elite, Mighty Mail, Star Struck astrology, Midiplay, Signs and Banners, Microsoft Write.
These are disks only:
Plutos, Millipede, Star Raiders, Time Bandit 2.1, Shadowgate, Arkanoid, Math Talk, Midi Maze, Tower Toppler (amazing game), Sword of Kadash, Joust, Rogue, Obliterator, Thundercats, Terrorpods, Karate Kid, Major Motion, Rockford, Shanghai, Psion Chess (very strong), Mad Libs, Barbarian, A Mind Forever Voyaging, Defender of the Crown, Airball, Stoneage Deluxe, Little Computer People, ST Wars, Q Ball, Hex, Super Cycle, Flight Simulator and Book, Space Quest, King's Quest 2&3, Leisure Suit Larry, Hacker, Tass Times in Tonetown, Hitchhikers Guide, Oo-Topos, Fahrenheit 451, 10th Frame, Red Alert.
I will ship COD with shipping collect to the highest bid.
Please email direct to:
dginbey@mail.tea.texas.gov or if that doesn't work try:
dginbey@tenet.edu

>it is supposed to work on Falcons and TTs as some people who downloaded
>it told me. v2.50 is also a lot nicer looking than it's older
>companion.

I downloaded 2.50, and running in Falcon 256 non-interlace (or even
interlace) looks very nice, smooth, and easy on the eyes, quite
unlike running it in any of the ST compatable modes.

IMHO, this is an oddity, a curiousity, more than anything, since as
far as I can tell, there is no real software to run under the thing
(correct me if I am wrong, and name some ftp sites if I am)

As for cross-platform compatability, Linux 68k would be a better place,
given the nature of linux (its FREE!!) and the number of users...

YES!!! Please this is of a great deal of interest to me and thousands
of other Atari owners... if someone understands all this mess please
commincate to all us UNIX neophytes.

Hi!

Can anyone tell me if there is a program for my Falcon to read the newsgroups directly from a newsgroups service.

I want to be able to telnet to the service then quit from the term program and run the XXX program just like the winnv for Windows.

Michael Papadopoulos.

From: cfav1@leonis.nus.sg
Message-ID: <35h2pn$kqa@nuscc.nus.sg>
Source record: 180495

Is there a scanning software or module or part of a package for the MicroTek ScanMaker IISP? I have tried MT-Scan from DMC, but it does not support this new model. The author of MT-Scan has already left the Atari platform, as such, there is no upgrade.

To keep you from re inventing the wheel <G>

------------------------------ snip ----------------------------------

One of the ultimate ironies of the Atari ST system is that the computer is not upgradeable. I'm sure that many people from other computer platforms would be very quick to agree. Many others, such as Dave Small, and probably the people at ICD INC would take some small exception to this idea. I too would have to take a minor exception. Because of the relatively closed architecture of the ST this computer system has become a hackers heaven. It is with this in mind that I have written this recount of my experiences using SIMMs to upgrade STs to 2 1/2 megs.

It seems like each time I read an article about upgrades there is a long warning about warranties and technical competence. Why should I care if you ruin your computer? As far as your warranty goes, if you remove the screws on the bottom your warranty is void. My upgrade will cause your warranty to explode and possibly ruin your computer desk in the process. There is the small reminder that since the warranty is only 90 days in the first place, the odds of your warranty being valid at this time are nill. One small consolation, if you do ruin your computer while attempting this upgrade you can always buy an STe and use the SIMMs there.

The reasons I developed this particular style of upgrade are two fold. The first is that I just wanted to see if I could do it. The second has to do with my personal feelings about sockets that plug into existing chip sockets and cause permanent damage.

There are a couple of advantages to my upgrade techniques. 1} I use SIMMs, which are noted for their reliability. 2} The upgrade requires only two minor jumper/foil cuts. 3} All connections are soldered which means no sockets to ruin and if properly done provides extremely reliable long term operation.

Since you are probably going to try this anyway, you should go ahead and get yourself a pair of 1 meg x 8 SIMMs. If you should happen to get the 1 meg x 9 SIMMs, that is ok too. The speed isn't that important, but it is hard to find a set of SIMMs these days slower than 100ns anyway. While you are in the getting mode, get yourself a few feet of 28 gauge Kevlar wire such is used for wire wrapping. You will also need a decent temperature controlled soldering iron running between 750 and 800 degrees. Take your 25 watt Radio Shack type iron and throw it away while you are at it. Those small and unregulated irons are a good source of just the right types of static known for killing CMOS circuitry dead. I should also mention the fact that the longer a soldering iron remains on the circuit board, the greater the chances are that you will begin destroying the foil patterns.

The major problem I have encountered while upgrading STs is the numerous version revisions. There are no fewer than 6 different styles of mother boards and many of them use different circuit symbols for the various components. For this reason I will not be referring to any of the components by their circuit

symbols. All references will be by component name, such as the MMU, or the upper and lower RAM banks. I simply have to assume you know what your are doing.

I begin the upgrade by removing the mother board from the computer and placing in on an anti-static workbench. Depending on the model of computer, the upper bank of ram chips must be removed. By upper bank I mean the row of chips connected to the CAS1, and RAS1 lines from the MMU chip. You may verify this by measuring from pins 18, 21, and 22 of the MMU chip. CAS1 H = 22, CAS1 L = 21, and RAS1 = 18. The corresponding locations of the CAS and RAS lines on the ram chips are pins 15 for CAS and 4 for RAS.

The ST uses two rows and four columns of ram chips in their memory addressing scheme. The Row Address Strobes (RAS) are labeled RAS1 and RAS0, and the Column Address Strobes (CAS) are labeled CAS1 H, CAS1 L, CAS0 H, and CAS0 L where the H and L stand for High and Low. All the lines using the 1 are related to the the upper row and the lines labeled with the 0 are used in the lower row.

You will probably not find the above mentioned labels printed on your particular mother board. The only time I remember seeing this done was on the 520ST with modulator. Don't expect it.

If you are wanting to do this upgrade on the early 520 you should remove the entire set of ram chips. Your final upgrade will be 2 megs instead of 2.5. There is just no clean way to install all the wiring needed to installed chips.

Once the ram chips are removed it is time to mount the SIMMs and prepare the wiring. On the machines where the ram chips are mounted under the keyboard, there is a good place to mount the SIMMs right above the upper bank of ram chips. I use strips of double sided adhesive foam which I attach to the back of one of the SIMMs. I then stick this SIMM to the mother board. When the SIMM is mounted it is about 3/4 inch above the spot where the ram chips were removed. I then take another strip of adhesive foam and cut it to a width of 1/4 inch. This strip is placed on the top rear of the SIMM I just mounted on the board. Now I carefully place the second SIMM directly over the first. It is important to line the two SIMMs up so that they match exactly. When completed I have the two SIMMs stuck together, with one on top of the other. From this time on, consider the top SIMM to be the "High" and the bottom SIMM to be the "Low" column.

For the STs with the ram under the keyboard, the upper bank of ram chips just happens to be the ones farthest away from the front of the machine. It also happens that the "High" column is o the left and the "Low" column is on the right. To make remembering easier I use a marker and mark the center between the

two columns. That make eight on the left and eight on the right side of the mark.

If you have one of the STs with the ram under the powersupply, you will need to use the ohm meter and verify the locations of the upper and lower banks. While I have looked at one of these beasts I have not done an upgrade on this particular style so I cannot suggest a location for the SIMMs.

The following pinouts will be critical to your successful upgrade: 1 meg x 8 SIMM

```
0 0 0 0 0 0 0 0 0 1 1 1 1 1 1 1 1 1 2 2 2 2 2 2 2 2 2 2 3
1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0
| | | | | | | | | | | | | | | | | | | | | | | | | | | |
V C D A A D A A V D A A D A A D A A N D W V D N D N R N N V
C A Q 0 1 Q 2 3 S Q 4 5 Q 6 7 Q 8 9 C Q E S Q C Q C A C C C
C S 0 1 S 2 3 4 5 S 6 7 S C
```

256K DRAM Pinout

```
1> A8 16> VSS
2> Din 15> CAS
3> WE 14> Dout
4> RAS 13> A6
5> A0 12> A3
6> A2 11> A4
7> A1 10> A5
8> VCC 9> A7
```

If you notice, there is no A9 on the ram chips. This is the new address line and special consideration is required. I will cover this further on.

I start by making a check list numbered from 1 to 30 with two columns, one for the upper and one for the lower columns.

PIN 1
Beginning with pin 1 on the SIMMs take the kevlar wire and strip back about half an inch. The neat thing about the wire is that it fits perfectly into the holes on the SIMMs. Since the Vcc line is common to both SIMMs I insert the wire into the lower SIMM and solder it into place. I then attach the wire to the upper SIMM and solder it. Because the Vcc line is what it is, I now use a slightly larger gauge wire and run it from pin 1 of the SIMM to pin 8 of the nearest vacant ram. In order to keep things neat, I keep the wires as short as possible without any undue stress.

Since I removed the 16 ram chips I have my choice of spots for the placement of the wires run from the SIMMs. The following considerations should be taken into account.

The address lines A0 through A8 are common to all the chips.
The CAS lines are split so CAS1 H is common to the upper column
of 8 chips and CAS1 L is common to the lower 8 chips. The RAS1
line is common to all 16 chips. The DQ lines are separate and
require special wiring.

PIN 2
The CAS line on pin 2 of the SIMMs needs to be split up. The
lower SIMM is wired to any convenient pin 15 of the lower column.
The upper SIMM is wired to pin 15 in the upper ram column.

SIMM UP 2
---------- snip ----------

PIN 3
DQ0 is split. The lower SIMM is run to the first chip socket of the lower column. This should be the chip closest to the spot previously marked as the center. Both columns run from left to right. The DQ label corresponds to the Din or pin 2 of the ram socket. The upper SIMM is wired to the ram socket farthest to the left.

PIN 4
A0 should be wired from the lower SIMM to the upper SIMM. It should then be wired to the nearest ram socket pin 5. The only major concern here is neatness.

The rest of the wiring follows the same order listed above. Pin 21 of the SIMM should be jumpered between the two SIMMs and then run to ram pin 3. Pin 27 of the SIMMs is also jumpered between the two SIMMs and then run to ram pin 4.

PIN 18
The A9 line is the new address line which is required when 1 meg chips are used. This line should also be jumpered between the two SIMMs. Using the Kevlar wire I run to one of the holes where the ram chips were removed. What I like to do is drop the insulated wire through the hole and run it over near the MMU. The idea here is to run the wire from the SIMMs pin 18 through a 33 ohm resistor (which you need to come up with) to pin 64 of the MMU. I like to use a little shrink tubing over the resistor connections since this is an outboard hookup. Using a couple of convenient holes for wire routing simply makes for a neater job.

I follow my check list exactly and mark each connection as it is made. Since the key to a well done job is top quality craftsmanship, I am careful to do the best job I am capable of.

There is now a final set of steps which is required to make this upgrade work. Because the upper bank of chips was removed, it is important to do something about the routing of the Row and Column address strobes. The configuration of the computer as it now lies consists of an illegal ram configuration. By this I mean that you have a 512k lower bank and a 2 meg upper bank. This needs to be reversed.

Reversing the CAS and RAS lines is simple but can be tricky. If you don't get exactly right your computer won't boot at all. It won't hurt it, it just won't work. What I like to do is locate the resistors these line pass through. The technique is to identify which resistor is associated with CAS1 H. I then identify find the resistor for CAS0 H. Once this is done I will lift one end of each resistor. Using whatever technique i can that is clean, I cross wire the ends of the two resistors to their respective holes in the pc board. I then do the same for the CAS1 L and CAS0 L lines.

Finally I identify the RAS1 and RAS0 lines. These two lines can be found side by side with the CAS resistors. On the foil side of the circuit board I cut the foil between the pads for RAS1. I then do the same for RAS0. If you look at the spot where the resistors are mounted, it looks like there is a place for two more resistors to go. This is usually where the RAS lines are found. The final step is to run jumper wires in order to cross wire the RAS0 and RAS1 lines.

It is important to check your work with an ohm meter at this point. I use a Fluke 77 which has a diode checker position. This setting of the meter is safe for CMOS circuits boards and also makes a beeping sound whenever it senses a short. The following measurements should be taken and verified.

MMU Pin # SIMM pin # New Identity

6 <==========> upper 2 CAS0 H
7 <==========> lower 2 CAS0 L
8 <==========> both 27 RAS0

You should also verify the new CAS1 H, CAS1 L, and RAS1 lines. These lines go to the remaining ram chips which are now your new upper bank.

Ram Pin # MMU #

4 <==========> 18 RAS1
15 (right) <===> 21 CAS1 L
15 (left) <====> 22 CAS1 H

This completes the upgrade. If you want to go to 4 megs all you need to do is make a few minor changes. Remove all the ram chips and of course use 2 pairs of SIMMs. Wire one pair into the upper bank position and the second pair into the lower bank position. You do not need to do anything about swapping the CAS and RAS positions.

If you are doing the upgrade on an older 520 that does not use the 1040 mother board you can also ignore the part about the CAS and RAS swapping.

I would like to suggest that you get ahold of some type of memory tester program. There is one in the GEnie library written by Barry Orlando which will do the job nicely. Another program written by Willie Brown does a good job as well. It is also possible to use NeoDesk to look at but not test our memory. With Neo Desk simply click on the desktop info and read the screen. there is a line at the bottom of the screen which identifies free memory.

I will admit that once or twice my upgrades did not work at first and required some trouble shooting. If this is the case, you will need to double check your work. Each time I had trouble

it was caused either by a faulty solder connection or by getting confused when I swapped the CAS and RAS lines. If you get these lines wrong, you will probably not hurt anything, but your computer will lock up during the boot cycle. The only way to really hurt things is by wiring your VSS and VCC lines to the wrong places.

There is one other place you may get some trouble.
If you are upgrading from 512k and the computer has never had a memory upgrade before, there is a possibility that the MMU chip could be bad. This can occur because the CAS1 and RAS1 lines have never been used or tested. I ran into this problem once. It also doesn't hurt to remove and clean the MMU and its socket. This can pay off on the older machines.

Just in case I have inspired you to go out and do this upgrade, let me advise you that it takes me about 6 hours to do this job. Using a good desoldering machine to remove the old ram chips takes about 1 hour. You could also use a fine pair of cutting pliers and clip out the chips. This would be much faster, but I like to save the chips for other projects. The fastest upgrade I did was on a 520STFM where the 1040 mother board was used. There were no ram chips to remove.

Now that it is all done, it is time to sit back and enjoy your work. 2.5 megs is a pretty nice upgrade. The cost was fairly reasonable, the SIMMs cost $90 to $110 a pair and 100 feet of Kevlar wire costs about $5 bucks. The only other cost is for the resistors and depending on the computer you will need from 1 to 4 of them. I recommend using 1/8 watt 33 ohms.

I hope that this information is of some value to those of you who have read it. You may use this document in your club news letters or magazines provided it is printed in its entirety. You may not remove my byline cause I need some claim to fame. Finally if you should choose to perform this upgrade and kill your computer, you can always buy an STe and sell your dead computer to me, really cheap. Heck, I can always use a few more spare parts.

3936. Apex Media - Press Release.

Newsgroup: comp.sys.atari.st
Date: 1994-09-18 12:18:36 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <940918Z121836.754dbrewood@nest.demon.co.uk>
Source record: 180104

APEX MEDIA - FINAL SPECIFICATION

SYSTEM REQUIREMENT Atari Falcon030 4MB RAM VGA or RGB monitor A hard disk drive is not required but becomes essential when dealing with animation sequences.

COMPATIBILITY APEX MEDIA is fully compatible with the Expos&#65533; Video Digitiser, NVDI, MultiTOS, accelerators and screen enhancers. ACCessories and CPX modules are available at any time. JPEG conversion and Memory management CPX utilities are also included.

SYSTEM SPECIFICATION Selectable resolutions, 256 or true colour 320x200, 320x400 640x200*, 640x400* * RGB monitor only

Actual screen resolution 240 or 480 lines, including colour zone

Virtual canvas Configurable up to 2048x1024

APEX MEDIA A true colour animation & graphic program designed specifically for the Atari Falcon030 using 68030 and 56001 DSP machine code for unparalleled performance.

Originally produced to support the Expos&#65533; digitiser, APEX MEDIA has now been expanded to include some of the most amazing features ever seen in any single graphics program. APEX MEDIA represents sheer power for all forms of graphic applications - a performance which has only been seen before on workstations.mance which has only been seen before on workstations.

For Animation & Morphing, APEX MEDIA excels. The Morphing option provides a proportional re-scale, stretch, skew and mirror across X & Y axes - new images can even be imported from disk and pasted above or below the existing picture. superb means to smoothly transform from one image to another while the powerful block functions allow complex animations to be produced quickly anded on a 4MB Falcon. easily - rotation to any angle, proportional re-scale, stretch, skew and mirror across X & Y axes - new images can even be imported from disk and pasted above or below the existing picture.

Post-Processing of animations can be performed using noise reduction, dejagging or motion blur to enable smooth transitions between frames. Advanced Delta compression of the sequence reduces memory and disk overheads, allowing large sequences to be produced on a 4MB Falcon.ed area being painted or filled to the required colour. Analog Transforms and Masks can be used in conjunction with an extensive range of brushes - simply select the function and paint.

The digitising tool allows single or multiple frame capture from moving smoothly around the canvas under zoom mode provides the user with pixel

accuracy. video in real-time up to 512x320 resolution in 16-bit true colour. Rostrum camera work stretches the system further by providing a 24-bit captureto any number of colours. facility. e imported into smaller canvas sizes with the use of fine scaling and the virtual canvas can be reconfigured up to 2048x1024, coupled with smooth scrolling around the image. Special features such as graduated circles, lines, rectangles and interpolative polygons, all drawn in real-time, puts APEX MEDIA head and shoulders above the competition.

For incredible realism, APEX MEDIA supports a true airbrush. This doesn't just place random dots on the screen, but processes the background image to transform the colour being used to produce a graduated spray effect.

Image Processing can be used in real-time for the Post-Production of true colour images to achieve a more natural (or bizarre) effect. Transforms or Masking of certain areas permits hue, saturation and brightness settings to be defined prior to the selected area being painted or filled to the required colour. Analog Transforms and Masks can be used in conjunction with an extensive range of brushes - simply select the function and paint.

The Real-time zoom is available at all times and can even be used during the replay of animations. Every single tool is, naturally, fully usable under zoom conditions, including the realistic airbrush and Image transforms. The ability to draw while moving smoothly around the canvas under zoom mode provides the user with pixel accuracy.

File formats are supported to cover virtually every file type - TGA, GIF, MTV, SPU, JPEG, SEQ, ANM, FLC, DAC, FWR. Existing Atari ST artwork is even supported with the inclusion of PC1 format. Images of any type can also be imported with colour reduction to any number of colours.

Full support is given to VGA and RGB monitors. True colour images can be

�supersampled� when using 256 video modes and even 256 colour images can be enhanced within true colour video modes by the use of dithering and supersampling. Large images can even be imported into smaller canvas sizes with the use of fine scaling and the virtual canvas can be reconfigured up to 2048x1024, coupled with smooth scrolling around the image.

If you do buy a PC to do direct-to-disk recording, spend the extra $50
or whatever and get SCSI instead of IDE hard drives. IDE has never
heard of DMA (direct-memory-access), which means the poor CPU has to
push all those bits across the wimpy 8Mhz ISA bus. Get a local-bus or
PCI SCSI system... it'll cost more, but you'll need it for high-quality
work.

Even after I installed the directories on my C: drive as cautioned in the OMEn 2.46 docs, my upgraded 520ST (4-meg RAM, TOS 1.04, etc.) bombs. OMEn won't be on my disk drives unless/until someone makes it work to the degree that it checks itself for proper installation and issues an error msg so I can tell what I did wrong.

As for cross-platform compatability, I know Linux is free, but has *anyone* heard of OS-9 ?????? I mean, Microware thought up this idea A WHOLE BUNCH OF YEARS AGO, and it's *already* working on most if not all 68K platforms. I know OS-9/68000 is a costly o.s. for most, but for the Atari-ST you can still find back-levels of it for not very much more over the cost of TOS 2.06/3.06, say (sans hardware upgrade). For the other platforms, we have to blame the lack of marketing to the home & business end users, blame the developers & Microware themselves, for not wanting to mass-market OS-9 so the price will come down

I.e. the cross-platform issue is *already* a reality if that's more important than TOS-compatability. Even OMEn is going to have difficulties running the same binaries on a 386 platform -- if you read OMEn's docs, you'll see that you'll have to recompile the pgms for the Intel versions of OMEn, just the same as what you'd have to do in porting OS-9 pgms to the 386/486 versions of OS-9 (yes it *is* already available too).

As a matter of fact, the Macintosh version of OS-9 is suppose to let you switch to Mac Desktop mode & let you run real Mac software on top of OS-9 software (in another window/session).

Likewise for the 386/486 versions of OS-9: it's suppose to give you *multiple* DOS window/sessions, and yes I've even heard it is MS-Windoze compatible as well.

Too bad no one thought of this for the Atari-ST versions of OS-9 (there are two: one supported directly by Microware [costly & uses ROM routines, not good for my tastes], and one from Cumana/Reccoware in Europe, a back-level version of which won't cost very much more than the new TOS upgrades).

So as far as I'm concerned, OMEn is just barking up the wrong tree -- a *truly* supported cross-platform "commonized" environment is already available, we just need to get 'em to mass-market them to help lower the cost.

> in software and there's an awful lot of it in demos I've seen so far....)

Demos have always annoyed me... I mean, really, who wants to see 400
different kinds of text scrollers? It annoys me even more; if I had
those hacking skills, I'd be writing some *AMAZING* games. Plenty of
ideas, I'm just low on the low-level skills you practically need to
write decent games on such a slow system (my ST). Now, if my artistic
skills were a bit better, I'd whip some up in C++, just to annoy those
people that think you need 100% assembly to write a good game. ;-)

This is, IMHO, a rather stupid way to release something. To me, a large
part of whether a game is good or not is playability... with an
auto-demo like this, you can see how it _looks_, but you'll have no idea
how it "feels" to play. For all we know, the controls could be pretty
awkward or unresponsive.

Don't even look. I play MPEG files on a '486dx2/66 with 16M of RAM, a localbus video card (a fast one, too) under OS/2, and it gets around 12-20 frames/second on 320x200 movies. On a '386/33 with 8M, it was about .5 frames/second. Your ST (and mine, for that matter) is about 1/8th the speed of a '386/33, so you'd see maybe one frame every 16 seconds or so... painful!

Well, I've always wanted to write a text editor... :-(No time to do
it though. I write my HTML in MicroEMACS; you could always whip up some
macros to help with the HTML codes.

You could also use GNU EMACS and html-helper-mode, which takes a lot of
the pain out of writing HTML (or so I've heard; I don't use full EMACS).

Hey, don't forget NCR's TOWER systems, which had 68000s and 68010s.
I've got my ST hard drives in a huge TOWER case, and the system I use at
work for news/email is a TOWER with either an '020 or an '030 in it.

It seems that nobody ever got an official Atari version of UNIX, I do remember that Atari had worked on it for the TT030's. I think they decided that UNIX under a windowed environment (I assume X) really didn't run quickly enough, and then they decided to go onto the Falcon and Jag...

I wonder if they ever finished the project?

OMEN is currently up to version 2.50d, which is more stable and should be used instead of any prior version. It is available at micros.hensa.ac.uk (ask Danny for the exact folder/path.)

I've had success installing and running it on my TT (the startup was placed in a HD floppy). There is supposed to be yet another version due in the next weeks and when I get it, I will upload it to hensa.

My opinion is that it is unique to such an extent that people will not use it. It's claim to be platform/machine independent does not outweigh the ridiculous user interface (unless the programmer is allowed to re-model it.)

Have you tried benchmarking at that resolution? You will find you get performance less than a MSTE IME.

> cheap add-ons). And the Falcon can do it with color. I use a rather

Colour does not affect my main application (C programming). The main problems are speed and memory. The TT solves these better than the Falcon IMO.

> Falcon, as the Falcon is clearly superior in this category. Of COURSE

Its only superior if your use requires this functionality. Mine doesn't so AFAIC its not superior.

I'm not advocating buying TTs instead of Falcons in most cases, just picking the best machine for the job in hand.

Roland.

> from the store) still sits next to my TT (and is working just fine!).

yes - but you probaby bought your 520ST in 1986 when there weren't any
other options to upgrade the memory.

Nowadays there are some very neat and quite cheap boards which do the same
job, and are far less risky for those people less accustomed to a soldering
iron than you are.

Roland.

this happened to me recently. I was using the ICD utilities and found that reformating the drive *didn't* work. In the end I used the 'build one partition only' option on drive C. This did it!

Roland.

3963. Re: Unix on Atari ST

Newsgroup: comp.sys.atari.st
Date: 1994-09-18 23:56:36 UTC
From: warwick@cs.uq.oz.au
Message-ID: <35ik3k$cul@uqcspe.cs.uq.oz.au>
Source record: 180406

Atari decided that the TT030 is not fast enough to run X.

They were correct.

The Sun 3/50 was a total dog under X. We would use SunView (aka GumbyView,
SunSpew, etc) instead. And that was running BSD, not SVR4/5 which is
even slower (Atari's was SVR4 based).

The best hope for Unix on Ataris is the Linux 680x0.

> run Straight Fax 2 at the same time?.

If it is a Zyxel (I think that is the right spelling), then CoNnect is
supposed to be able to do nifty things with it. I have never tried this
feature, so I cannot speak from experience. CoNnect is available from
atari.archive.umich.edu and other fine ftp sites.

As for Straight FAX, I thought it could be run as an accessory for just
such occasions?

In case you have any questionss about Flash II, feel free to ask away. I check this newsgroup daily so should be able to get a quick answer off to you or anyone else.

It's true that Flash II is written by Paul Nicholls in Brisbane, but we are the worldwide representatives for the product so you need to purchase directly from us. We're currently shipping version 2.2 and will soon be releasing an interim upgrade, version 2.21.

Let me know if you have any other questions.

3966. Misc computer items forsale

Newsgroup: comp.sys.atari.st
Date: 1994-09-19 01:27:39 UTC
From: swood@vela.acs.oakland.edu
Message-ID: <swood.779938059@vela.acs.oakland.edu>
Source record: 180408
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.pc-clone

I still have the following computer related items forsale that have
not been claimed:

MSDOS system peripherials

AST SixPakPlus memory/serial/parallel/game/clock card $10
BBS files included from AST on how to configure
designed for XT class systems, but might work on later
architecture. expand past 512K to 640K plus add up to 1Meg.
currently loaded with two rows of 4164-12's(x9)

AST Advantage PC-AT Multifunction expansion board offering up to $30
3 Meg of memory and powerful I/O Capabilities
serial/serial/parallel/game adapters
original manual, loaded with 2 Meg of 41256-12's (4x18)
AST BBS files also included

National Semiconductor QuadFAX-96 Fax only modem and software $20
Original manual and software disks. 9600 baud send/receive
This card does not use com port addressing and can
be configured to IRQ3,4,5 or 7. 150,250 or 350Hex addressing

Magnetic Peripherials, Inc. 42Meg MFM hard drive (LOT O-8809) $40
(A.K.A. Seagate st253)
WDC 8-bit MFM half-card (floppy/hd pins) $5
and cables (free with drive for total of $40 for all 3)

Maxconn/Unisys SuperVGA card (paradise compatible if I remember right)
I am not sure if I wanna sell this one, but I do need some money
so make me an offer if you are interested. This does has the
memory expansion on it but does not have a VLB adapter.

generic (Winbond) serial/serial/parallel/game adapter $12
(I don't really care if I sell this one either as it
will end up in my future system is not sold for the
asking price which is firm)

ATARI ST Software

Michtron Super Conductor - MIDI sequencer $5

Flight Simulator II (TOS 1.4 rainbow compatible) $20
original books and maps

MIG 29 Fulcrum by DOMARK $25
This is a real slick (Italian origin) fighter
simulator. The version that I happen to have
is a collectors edition including a poster with
a blowout/cockpit shot and various MIG 29 info as
well as a full color book by Jon Lake on the jet.
MUST see to appreciate - real nice set

All items buy pays shipping (average about $3). I would prefer to have
this stuff sold A.S.A.P. as that is how soon I need the money, so make
me an offer if you like except where otherwise indicated.

send email replies or call me direct (810) 394-0351

3968. Summary: Printer Redirector

Newsgroup: comp.sys.atari.st
Date: 1994-09-19 03:51:00 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <35j1r4$e9d@mailer.fsu.edu>
Source record: 180410

First, thanks to all that suggested programs for redirecting printer output
to a file.

I tested the following programs:

icca (I can capture anything) - messed up my hard drive, needed Diamond Edge
to fix partition, not recommended.

Barrel - cannot handle files over 120k or so.

Magic Spooler - excellent! Works perfectly, very nice. This is a combination
spooler and print redirector (either or both, whichever you want).
It consists of an auto folder program and a cpx module for
configuration (must be used). It looks slick, and did not choke on
the multi-megabyte PostScript files I generated. All buffer sizes
can be set with little sliders in the cpx module. On
atari.archive.umich.edu, it is in /Utilities/m_spool.zip (16k!). Both
English and German versions are included in the zip file.

Incidentally, if anyone is curious, I needed this program for Image Cat, so
I could generate PostScript files with thumbnails of my clip art for DTP
(Pagestream). Image Cat can do PostScript, but only directly to the parallel
port. No more hunting through zillions of clip art files for me!

I don't think so because I flush a complete cache even with slow
harddrives, it could take several seconds and up to now nothing
happend which make me think that there is something time-critical.

It seems, that you are using an outdated version of slattach. Better get the
most recent one you can get.

|> I'm never quite sure that I still have my connection over the serial
|> line. (BTW I basically have a straight serial connection to the
|> network, no modem.) What can I use to basically just send stuff to and
|> from the modem2 port, from within MiNT? All I need to do is send a few

Try to use the ping program to ping the host you are connected to.

|> The other possiblity that I have considered is that something is
|> wrong with what I'm typing in as the hostname. I've tried using the
|> straight IP address of the host I'm connected to, but it gives me the
|> same error.
That cannot work, even if the slattach would work correctly. Your machine
must have its own ip number and name. And the host you are connecting to
must also know that.

Regards,
Ulrich

3980. v08INF2: Introduction to comp.sources.atari.st

Newsgroup: comp.sys.atari.st
Date: 1994-09-19 10:17:18 UTC
From: avg@cwi.nl
Message-ID: <CwDGKv.BI1@cwi.nl>
Source record: 180422
Cross-posted to: comp.sources.atari.st,comp.sys.atari.st

Submitted-by: avg@cwi.nl (Annius Groenink)
Posting-number: Volume 8, Info 2

This article is posted regularly. It gives a short introduction to comp.sources.atari.st and describes how to submit sources or digressions to the group.

I am always looking for suggestions on how to improve the usefulness of the newsgroup, and can be contacted at the following internet address:

avg@cwi.nl

Annius Groenink, Moderator.

ABOUT comp.sources.atari.st

The moderated usenet group comp.sources.atari.st contains publications or announcements of sources and texts about programming for Atari TOS computers. The publications on comp.sources.atari.st may be freely distributed as long as modifications are documented and the original authors are mentioned.

THIS IS A MODERATED GROUP. YOU CANNOT POST TO IT BY YOURSELF. Read the instructions below for submitting material intended for publication on comp.sources.atari.st.

SUBMITTING SOURCES OR DIGRESSIONS FOR PUBLICATION

Items intended for posting or queries and problem notes should be sent to avg@cwi.nl. If you are on a UUCP-only site, you can send them to uunet!cwi.nl!avg.

If you want verification of arrival, say so at the beginning of your submission, or in a cover note. I try to verify that a program works, and if I can't get it to work, I may hold up posting it for a couple of days. Please note that, except in rare cases, software without documentation will not be published. The backlog from receipt to posting varies from one to four weeks depending mostly on the set of submissions currently in my queue.

If you are submitting both sources and binaries, PLEASE send the two separately. If I have to separate your sources from your binaries by hand, your submission will most likely sit on the back burner for a

while, or be rejected outright.

Sources can be submitted in ASCII form, but for large pacages, a ZOO 2.1 archive encoded using Dumas uuencode is preferred.

Please include a description of your program at the top of your article. Look at old issues of comp.binaries.atari.st for examples of the sorts of descriptions I'm looking for. In general you should indicate what the program does, on what types of Atari TOS computers, whether your program requires a certain amount of on-board memory, a hard disk or a certain screen resolution. If necessary, I may rewrite or add to this information in order to make the postings to the group more uniform. I can't check your submission in all possible configurations, and see what works and what doesn't. Without a description, your submission is likely to be rejected.

THE STRUCTURE OF COMP.SOURCES.ATARI.ST ARTICLES

There are two types of articles in comp.binaries.atari.st: "information postings" and "sources". The source postings are also called "Issues". For a while, 'announcements' were also accepted, but there is now a dedicated group, comp.sys.atari.announce, for that purpose. The type of a posting can be distinguished by the subject line:

Subject: v02INF1: Introduction to comp.sources.atari.st

This first word in the title identifies this as the first info posting of volume two. Similarly, the subject line shown below:

Subject: v06i081: godsrc -- Universe simulator

identifies this as the 81st source article in Volume 6. Large sources are broken up into smaller pieces, and have subject lines that look like this:

Subject: v06i088: decbustr -- VMS clone in ST-LOGO, Part03/08

Certain information about the system configuration required to use the program is given on the keywords line.

Keywords: MWC, Megamax, 1meg, high

This means that the program compiles with Mark Williams or Megamax C, requires at least one meg of RAM and only runs in high resolution. Following is a list of keywords; new ones may be added as needed. They are mostly self- explanatory.

Alcyon - Alcyon C (included with Atari developer's kit)
MWC - Mark Williams C
Megamax - Megamax C
Laser - Laser C
Lattice - Lattice C
C - Any C compiler

OSS - OSS Personal Pascal
BASIC - ST BASIC (this is not a joke!)
uuencode - program is uuencoded (uudecode required to unpack)
arc - program is archived (arc required to unpack)
zoo-high - program is archived (Zoo 2.1 required to unpack)
lharc - program is archived (lharc required to unpack)
high - high resolution
medium - medium resolution
low - low resolution
1meg - needs 1 meg of RAM

The References: line, if present, points to the previous part of a multi-part program, so that newsreaders (trn, nn, etc.) which can follow threads will recognize a large program as a single thread.

The first few lines of an article are auxiliary headers that look like this:

Submitted-by: david@bdt.UUCP (David Beckmeyer)
Posting-number: Volume 6, Issue 80
Archive-name: micro-rtx

The "Submitted by" is the author of the program. If you have comments about the sources published in comp.sources.atari.st this is the person to contact. When possible, this address is in domain form, otherwise it is a UUCP bang path relative to some major (backbone) site.

The second line repeats the volume/issue information for the aide of notes sites and automatic archiving programs.

The Archive-name is the "official" name of this source in the archive. Large postings will have names that look like this:

Archive-name: desktop/part01

REPORTING AND TRACKING BUGS AND PATCHES TO POSTINGS

Most of the time, bugs and updates will be posted to comp.sys.atari.st. Sometimes, "official" updates from the author will be posted submitted to comp.sources.atari.st so that they are archived with the sources.

Since there is no easy way to apply source code patches on the ST, changes to a program often result in a whole new version being posted.

To report bugs, contact the person listed in the Submitted-to header. Often there is a contact address in a README file, too. I do not maintain the sources I moderate, so don't send your bug reports to me.

Mickey,

Too bad none of the software you have is MIDI -- but it's OK. I would be interested in the NeoDesk CLI if it works with NeoDesk 3.0 (which I run on my Mega). Also, are any of the games playable on mono monitors?

John

3983. Re: For Sale: Cubase/Studio Module/MIDEX+/Sound Designer

I am very interested in this stuff -- could you tell me a bit about it:

1. This Studio Organizer thing -- is it like X-oR? If so, does it support the following: Yamaha SY77, TG33, FB01, TX81Z, Kawai K4, Korg M1, ART SGX2000?

2. Will all this stuff run on a Moniterm 19-inch monitor (res. 1280 x 960)?

3. Are all the original disks (and original documentation) included?

4. What samplers does the Sample Editor support?

5. Will _all_ this software run on a Falcon?

John

3984. OCR 1.3 released (Freeware)

Newsgroup: comp.sys.atari.st

Source record: 180425

```
OCR V1.3 - Optical Character Recognition for Atari ST/STE/TT/Falcon
-------------------------------------------------------------------

I've uploaded OCR 1.3 at

ftp.uni-kl.de /pub/atari/misc/ocr13.lzh
ftp.isbiel.ch atari/diverses/ocr13.lzh
ftp.cnam.fr /pub/Atari/Text/ocr13.lzh
atari.archive.umich.edu atari/Applications/Other/ocr_13.lzh

Features of OCR 1.3:
- FREEWARE
- RSC files in English, German, French, Dutch included.
- DOCs in English, German.
- Supports GDPS scanner drivers.
- It works in any resolution (>=496x200).
- Hypertext On-line help is available using ST-Guide or 1st-Guide.
- It works under MTOS, MagiC (=Mag!X), Geneva (not tested).
- Windowed dialogs.

Usual problem is the disks have the same serial number,

3986. Web pages for Atari!

Newsgroup: comp.sys.atari.st
Date: 1994-09-19 12:59:49 UTC
From: msh@mserv1.dl.ac.uk
Message-ID: <35k205$8sg@mserv1.dl.ac.uk>
Source record: 180427

I just wanted to let you know I have started creating a Web page for the Atari. It is to cover all formats and I would appreciate it if anyone could mail me with ideas for things to include. Also any reviews, news or general commentary will be welcome and will be considered for inclusion. I hope to have a first version up before the end of the week so I will keep you all posted.

I am doing this page for two reasons:

1). To practice writing HTML scripts (this will be my first so expect it to improve with time).
2). To support the Atari which seems to get little mention (let alone whole pages) dedicated to it on the Web.

I myself have a 1040STF and 4Mb Falcon with 127Mb HD. There is also an Atari Lynx in our house so I can comment on a fair range of Atari hardware. I also have access to an Atari Jaguar from time to time so I hope to bring you the latest on that also.

Please send any comments or pieces for inclusion directly to me (PD and Shareware will also be accepted if UUEncoded).

Thank you for your time,

Mark msh@dl.ac.uk

3988. Experiment in the ZFC Web pages - Drive U Project

Newsgroup: comp.sys.atari.st
Date: 1994-09-19 14:46:43 UTC
From: groenink@inter.NL.net
Message-ID: <CwDt1v.HB9@inter.NL.net>
Source record: 180428

A preliminary version of the 'Drive U' project has been made accessible
through the ZFC Web service.

The 'Drive U' pages provide thematic links to Atari FTP sites
worldwide. So if you are looking for a particular communications
package, you simply click on 'communications' and a listing of
clickable FTP addresses will appear that will lead you directly to all
communications packages for Atari computers available on the internet.

As the project is still in an experimental phase, the current pages
only cover 4 FTP sites in Germany, but the number of sites mirrored
should increase over the next weeks, and in the end cover almost the
entire Internet. The current version gives a good impression of the
expected final result.

Any comments, help, questions and suggestions are welcome.

The URL of the ZFC web pages is

http://www.nl.net/~zfc/index.html

(then click on 'the Atari Directory')

There's a few, like QBBS, RatSoft and Octopus. I am going to change to
Octopus which is a very fast system and it also works fine on an 8 MHz ST
under MultiTos. Koos Kuil, who is developing Octopus is very friendly too.
I'd say go for Octopus. It's quite expensive though, about $80.

A UK computer Music mag (Sound on Sound>? looked at the Falcon in great
detail this month as a MIDI machine and whilst the Mac and PC have had a
good deal of coverage latel, they said the Falcon was still the dieal
machine, especially with Cubase Audio and the 2 extra HW interfaces for
it (new DAC and some other thing).

Source record: 180441

] Steve, could you clarify that site for me? I've been watching that site
] for this program very closely, figuring this is the first place it would
] show up, and have not seen anything. Could you perhaps tell me what the
] filename is?

I would have only gotten it from 1 of 2 sites:

atari.archive.umich.edu

or

ftp.uni-kl.de

AFAIK the filename is medieval.zip/lzh (ZIP I think)

on atari-archive, it would be in:

/atari/Games/

somewhere. (Try the 0index file as it's probably in one of the nicely
organised new sub-directories)

on ftp.uni-kl.de it would be in:

pub/atari/games/

somewhere. (It's somewhat tricky for me to do a quick check on this
system! :)

3998. Re: TOS 1.0 problem and HD upgrade

Source record: 180442

] Is this a known bug in TOS 1.0 and if so, is there some fix for this?

1.0 had _big_ problems with Media change. There's a program called
'FMC' (Force Media Change) which helps a little bit. It should be in
atari/Utilities/ on atari.archive.umich.edu somewhere. If at all possible
upgrade to TOS 1.4. The difference over 1.0 is amazing! Everything is
faster, and there's a _lot_ less bugs! (However, it's neither cheap,
nor easy to find these ROMS. And more often than not, a lot of hassle
is involvedin installing them. As Atari is unlikely to help, methods
become tricky!)

Message-ID: <35kvio$ao4@mailer.fsu.edu>
Source record: 180443

Migraph (makers of various scanners for the ST/TT/Falcon, Touch Up, OCR, Easy Draw, and others) just sent me a nice newsletter. They are still around, and still selling Atari products. One can obtain one of these newsletters by calling 1-800-223-3729, FAX 206-838-4702.

One product that might interest current owners of Migraph scanners is a PC interface card, which allows one to use the scanner on either machine.

I'm not connected with this company in any way, I just thought this might be of general interest.

From: rgivan@cix.compulink.co.uk
Message-ID: <CwEFKy.MK@cix.compulink.co.uk>
Source record: 180447

> So can I buy one of those SCSI Ethernet adapters (they cost $200 I
> believe) and use it with the Falcon?

Depends.

Anything SCSI should plug quite happliy into the SCSI port. Avoid anything VME based as you don't have a VME slot (unlike the MSTE & TT). There are also parallel port adaptors for PCs, that will fit the Falcon.

The main problem is software. Unless the TCP/IP package you decide on *specifically* supports your ethernet adaptor, then it isn't going to work. AFAIK there is *very* little support for ethernet adaptors of *any* sort in the Atari market place, despite the recent developments in TCP/IP software for the Atari.

:-(

Roland.

> do remember that Atari had worked on it for the TT030's. I think
> they decided that UNIX under a windowed environment (I assume X)
> really didn't run quickly enough, and then they decided to go onto

I think its more of a case of 'they couldn't be bothered'. I saw the TT030 running X, and it looked fine. It wouldn't have been hard to make a faster TT (just add a bigger cache), and the rest of the hardware is (well was) well up to the job.

But to do it, they would have been competing directly with all the major UNIX workstation manufacturers. Atari probably did well to aviod this as their heart wasn't really in it.

:-(

Roland.

>to function reliably. It often shows only the last disk that was in the drive
>even if I change the disk and press ESC.

This is due to the disk drive that has been fitted, some Atari drives and a
number of OEM drives will do this, there is no simple fix...

4009. Cubase Falcon Only Up to 256M HD Partition?

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 01:00:43 UTC
From: mipap@ars.ath.forthnet.gr
Message-ID: <14267FNPUVHGCCAETJU@ars.ath.forthnet.gr>
Source record: 180384

IB>I've heard that Cubase Falcon will only record up to a 256M hard drive
IB>partition, with out
IB>rolling over, or seeing a larger partition. This leaves only room for about

You WILL have problems if you try to make greater than 256MB partitions.
Not from Cubase but from other programs. Diamond Edge is one...
I have recorded to a partition size of 340MB but i couldn't optimize the
partition with the Diamond Edge program.

IB>minutes of 8 track hard disk recording! Can anyone verify this?

You can. Channel one on partition D, two on E, three on F, etc...
The channels may be on different partitions or on different units.
Have you seen Cubase Audio v2? It's great!!! Most of the bugs are out!

Michael Papadopoylos.

4011. PLAYMPEG 0.6 Released

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 01:29:28 UTC
From: mdg@ukc.ac.uk
Message-ID: <10543@gos.ukc.ac.uk>
Source record: 180355

I've just uploaded PLAYMPEG version 0.6 (Falcon) to several Atari FTP sites:

atari.archive.umich.edu
ftp.uni-kl.de
asimov.cnam.fr

and several others...

PLAYMPEG is an INTRAFRAME only MPEG-1 video stream decoder, this version is 30% faster than the previous version (v0.4) and plays most MPEGs at between 13 and 21 Frames per second!! The unregistered version is grayscale only, for details on how to obtain the colour version, please read the text file contained within the archive. Registered Users waiting for the colour version should receive it by the end of the week.

Cheers
Griff

*** 1STVIEW ***

Versions...!!

Hi, does any one know what version you can get of this program
via the net, I have version 1.0 but I have seen PD adds for version 2.0..?

*** ZEIGSMIR ***

Also some one e-mailed me that there is a better/improved ,? program than
1STGuide or was it 1STVIEW, ZEIGSMIR, is the better, does it have some more
features etc, does it support JPEG's/MPEG's, ? but because its all in German
I can't find out..?

Thanks...........

4013. Moniterm Monitor on TT/STE

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 01:37:48 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <35ledc$2sm@mailer.fsu.edu>
Source record: 180354
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

For a 19" Moniterm monitor (Viking?), I would like to know:

1. Can this be hooked to a TT? What is involved?
2. Can this be hooked to an STE? Ditto.

There is a card for the MegaST computers that fits the internal megabus connector. I'm pretty sure I don't have one in the STE (replaced by a VME card slot). I know there are several monitor cards for the STE/TT, but can any of them drive a 19" mono monitor?

Thanks in advance for any assistance.

>
>I must admit, I am confused. How do you use a button that is hidden?

I think what he means is the buttons that have a small box or circle next
to the text. Since there is no outline box around the text, the button
occupies half the height. they look something like this:

X Confirm Deletes
0 Confirm copies
X Confirm overwrites

These would use 48 pixels (in ST high) where standard buttons would use 96
if organised in the same way.

>
>I can't be the only one with these problems, can I?

I get the same problems with Screenblaster. I think this is a limitation
of the Falcon and I am very interested in finding a solution. I find that
the worst error rate is when using DA's Picture and saving large TIFs
(5MB) in 256 or true colour.

>I have an opportunity to buy a Mega ST and have heard conflicting reports
>as ti its clock speed.

Clock speed is 8MHz, unless they added an accelerator like the AdSpeed.

>Could someone please give me some specs on this machine?

The Mega ST is just a 1040STfm in a larger case (makes for easier upgrading), and contains some extra hardware.

The case features an external keyboard, which is a definite plus in my mind.

The new hardware:
BLiTTER chip (for faster graphics)
Internal Expansion Bus (mainly for graphics cards, I think)
Either two or four megs of RAM (no SIMM slots, though)
Peripheral co-processor slot (for 68881 math co-processor, etc) (not used by almost any software)

The original Megas also shipped with TOS 1.02, though I believe the later ones shipped with TOS 1.62.

Hope that helps,
Tom

MOTU, the new owners of X-oR, still support the Atari version, though no new development is planned on it. I don't know if it supports the Peavey, but I know it supports a lot of the newer synths like the SY77/99, K2000, O1/W, etc ...

I, too, have an older version (1.1) that I need to upgrade, as I own several synths (SY77, TG33, ok, so it's not "several") that v1.1 does not have profiles for.

John

4029. Re: Atari Falcon vs IBM Compatible w/SoundBlaster

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 12:36:29 UTC
From: contacts@mits.mdata.fi
Message-ID: <35ml0d$20q@prime.mdata.fi>
Source record: 180375

>A UK computer Music mag (Sound on Sound>? looked at the Falcon in great
>detail this month as a MIDI machine and whilst the Mac and PC have had a
>good deal of coverage latel, they said the Falcon was still the dieal
>machine, especially with Cubase Audio and the 2 extra HW interfaces for
>it (new DAC and some other thing).

The two boxes are:

Falcon Digital Interface (FDI) which has S-PDIF (Sony&
Philips Digital Interface) -standard digital inputs and outputs (both
optical fibre and coaxial cable connectors). Software for backing up
the Audiofiles from the HD to DAT and vice versa is included.

FA-8 Output expander, which Gives 8 analog outputs more to the Falcon,
and is fully controlled via Cubase's automated mixers. Cubase Audio
2 for Falcon has full FA-8 support internally.

Both of these add-ons are connected to the DSP port (in chain), and
are distributed by Steinberg.

About getting a D2D-system on PC: forget it, unless you you are
very wealthy and willing to spend you evenings in installing,
configuring and looking for the right cards and machines, which
fit together (e.g. the new Sound Blaster 32 can not work in PCI-
based machines...).

If the modem is a ZyXEL or compatible, you could use CoNnect by Wolfgang
Wander. It's shareware and I think the newest version is 2.46.
You could maybe run the both of them at the same time in MultiTOS, both of the
programs uses the GEM-interface.

4035. Atari Web Page Address!

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 15:56:21 UTC
From: msh@mserv1.dl.ac.uk
Message-ID: <35n0n5$1kg@mserv1.dl.ac.uk>
Source record: 180380

Hi,

Here is the address of my Atari Web page:

http://www.dl.ac.uk/TCSC/disco/mark/atari.html

The page is only a day old and will be updated regularly, but I need your input. This page is for you so you must tell me what you want to see. Please send ideas or things for inclusion to me. Send all mail directly to me and make sure any files are UUEncoded first. I look forward to hearing from you.

Thanks

Mark msh@dl.ac.uk

4036. Where can I find c_desk.lzh?

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 16:08:54 UTC
From: "M.P. Clemmetsen" <M.P.Clemmetsen@ncl.ac.uk>
Message-ID: <35n1em$3i4@whitbeck.ncl.ac.uk>

The subject says it really... does anyone know an ftp site that has Holger Weets' C-Desk GEM shell for Sozobon C. If not, do they know of any other way I can get hold of it, e.g. the name of a PD library that has it.

Thanks,

Michael

4037. GEM Spooler 3.2d available now!!!!!

Newsgroup: comp.sys.atari.st

This program is now available at hensa...well has been for a day
now....

get it from micros.hensa.ac.uk

(micros/atari/tos/o/o108/gspool32.zip)

This is the full english version...as supported by Andrew Lee in the
UK.

You may access hensa via telnet/pad/gopher and WWW.

Regards
Danny

From: sccoe@ucscb.UCSC.EDU
Message-ID: <35n4kt$fmk@darkstar.UCSC.EDU>
Source record: 180383

Yes, well that brings me back to my original question....does the the TUW122 TCP/IP software or Upoint support either a parallel or SCSI ethernet device????

Also some help using these German programs would be appreciated.
Thanx.

P.S. Where are you Dan, Ackerman? What's his email address?

4039. Blowup + Multisync's

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 17:37:28 UTC
From: pd@mole.bio.cam.ac.uk
Message-ID: <35n6ko$9l8@lyra.csx.cam.ac.uk>
Source record: 180396

At last, I have just bought Blowup hard 2, NVDI, and a Multisync monitor (Microvitec 1438). (from System Solutions, they had the best looking advert :))

I am well impressed !!!!

I think every Falcon should be sold complete with Blowup and a multisync monitor, because a low res monitor just makes the machine look crap.
It could be a useful selling point. (1024x768 rather than 640x480 as standard)
Maybe you could manage to fit the blowup bits inside the case so no-one would notice any difference. Or better still change the case (but thats another story). Include NVDI as part of the ROM and away you go!

I can now see what is on the screen when using Pagestream, and I don't have to wait half an hour for the screen to redraw itself. :)
The desktop is *huge* compared to what is was before. And there was me wondering where I could put all those icons :)

I do have a couple of questions/suggestions though....

When the monitor is in VGA mode, all the graphics in games look very blocky compared to RGB mode. Is this supposed to happen and if so why?
I thought it could run in a higher resolution and so make the pixels twice as big but that didn't make any sense to me.

Also when using Blowup it is difficult to choose the resolution you want.
Using the config program I can choose 2 resolutions for each of the colour settings (2,4,16,256,TC) and can change between them using the accessory.
But, if I want to change from say 640x480x16 to 800x600x16 I first have to change to a different amount of colours first.
Is it not possible to have an accessory which has a plain list of resolutions, chosen using the config program, and be able to choose *any* of them straight away?
Including the *same* resolution so you can switch between VGA and RGB.
A button on the accessory window to reboot would be handy as well.

Another thing, when I had Blowup and NVDI installed I decided to try Multitos to see what difference it made to that. I *think* the order was NVDI, Blowup and then Multitos but I'm not sure. It started up OK, but when it tried to load the control panel accessory it threw a wobbly saying something about a memory violation. This was the last thing I expected not to work since it came straight from Atari :). It did work OK without Multitos. This doesn't really bother me too much as I never have the need to run Multitos anyway....

One other thing, in the Blowup manual it says it can't do very high TC resolutions as the video chip is asking for data faster than the RAM can

deliver it. Would one of these 030/040 +TT RAM upgrades help this? I thought TT-RAM is supposed to be faster than ST RAM. Are Blowup and NVDI compatible with any/all of these boards?

Phil (who is very happy now, but still wants more...)

4040. ghosts in my pc

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 17:46:36 UTC
From: mhsmith@ornews.intel.com
Message-ID: <35n75s$39n@ornews.intel.com>
Source record: 180387

I built a multisync switchbox (kinda kludgey, but it works. The only problem I have is with slight ghosting in monochrome.

I think it might have something to do with the switch but not sure. I'm using a metal box as for my switch, connector, etc.

Has anyone else had this problem and what were the solutions?

Thanks,

M

> Cheers

See the program st2dos.zip on atari.archive.umich.edu in /Misc. It is a PC program that will convert most ST disks to PC readable ones. If you still have an ST, you can convert them there using DC Formatter (write MSDOS bootsector option).

>If so could I have a look at your code.

If you are using GEMDOS/BIOS/XBIOS calls from within your assembler or C
program then you're in for a suprise. GEMDOS/BIOS/XBIOS calls are not
're-entrant' so may NOT be used from within interrupts (VB)
You can however write directly to the screen (messy, especially on graphic
cards, Falcons etc..) or you can try to make your clock an ACCessory, then
it automatically gets 'attention' from the AES, the ACC system has 'limited'
multitasking capabilities. The clock won't be updated in non-GEM programs
however (that is programs without a menu-bar).

>connector. I'm pretty sure I don't have one in the STE (replaced by a
>VME card slot). I know there are several monitor cards for the STE/TT,
>but can any of them drive a 19" mono monitor?

The monitor can be connected directly to a TT, assuming the monitors input is ECL (mine is..) Maybe you will have to readjust the vertical hold and the picture may appear too small, on the left side PCB (facing the back) there is a jumper wire surrounded by a couple of holes marked A,B,C,D etc. If I can recall correctly I moved it up to the highest to get a full size picture. After adjusting the V-Hold and V-Size the monitor served me very well (Signum!3 is great on it).. But now I'm spoiled by the picture of my 'supposed to be dead, so throw it away' 17" color monitor.. The monitor is driven by a TSENG-VGA card (yes, from a PC..) in my TT, and runs now in 800x600 at 256 colors...
But for a razorsharp display go for the Viking! The picture is 'rocksteady' at 71 Hz and the desktop is huge...

4046. Re: CLI with NeoDesk & Geneva

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 20:10:33 UTC
From: wells_s@ix.wcc.govt.nz
Message-ID: <35nfjp$e8d@golem.wcc.govt.nz>
Source record: 180386

] Hi, can anyone recomend a nice "add-on" cli that works with NeoDesk and Gen
] I'm looking for something preferably PD or Shareware (I'm cheap! -).

There's the official Neodesk CLI which someone in this group was selling
a while back. They _might_ still have it, it looked like quite a good
program!

Neodesk comes with COMMAND.TOS which isn't the greatest, but it works.
(It's pretty slow). There's also PCOMMAND which is a lot better & faster.

If you want a unix CLI (probably...) then I wouldn't have a clue! (It
wouldn't work too well anyway, as Geneva apparently doesn't like MiNT)

4047. Atari 800 Emulator for MSDOS

4048. Falcon HD access errors

Newsgroup: comp.sys.atari.st
Date: 1994-09-20 22:37:29 UTC
From: mipap@ars.ath.forthnet.gr
Message-ID: <26537EVSYQIXVFBGLPD@ars.ath.forthnet.gr>
Source record: 180392

ID>To try out the speed of the drive I first used ratehd v3.05. I got this
ID>The access times varies from 32 to 46ms depending on graphics mode!

The ratehd never gives good results on a Falcon. I think that the
program needs fixing...

ID>I ran HowFast to get another opinion on the transfer speed. This reported
ID>writes at around 1.2Mb/s and reads at 1.8Mb/s.

Now this is readings you can depend on. The program works in a very
reliable way.

As for the other problems. The cable must be wrong. Check it.
I had the same problems. Once the hard disk just stopped during
optimisation and i hadn't backup up the data! A simple restart of the
hard disk was the solution (and pressing retry on the dialog box) but
I had to do this 4 times. After changing the cables, the problems
dissapeared.

Michael Papadopoylos.

From: tdcflcn@infinet.com
Message-ID: <35o1ji$d76@rigel.infinet.com>
Source record: 180310

OK, I got Geneva and NeoDesk 4 yesterday. Love it. Works better than I thought it would. It was well worth the upgrade. Now all I need is 16mb of memory so I can load all my favorite apps.

One Problem:

I'm having some problems with Atari Works, it will not load from Geneva in stand alone or from NeoDesk. With or without GDos. It will not run in single-task mode.

Help! I really need this.

Anyone know of any problems with Gevena running with Outburst or Warp 9?

Thanks,

Thomas (Tom) Chamberlain, tdcflcn@infinet.com

I probably sound two-sided, but the reason I still use MultiTOS is because it features shared memory, loadable file systems, and other goodies.

I really do not know anything about MagiC/X so I can't say anything about it. Is MagiC an AES replacement or Multitasking GEM or is it a low level kernel replacement/enhancement like MultiTOS?

[----- CUT HERE -----]

TOAD COMPUTERS -- PRESS RELEASE -- SEPTEMBER 20, 1994

It's official, it's for real, it's packed with stuff and it's headed your way! Watch for the new Toad Computers PRODUCT CATALOG! It's being mailed to 25,000 of our closest friends and you're probably one of them! If not, call us TOADAY and get on our mailing list! We want to make sure you have the latest information on the products available for your Atari!

The Toad Computers PRODUCT CATALOG is a full 56 pages packed with software, hardware and accessories picked EXCLUSIVELY for current and prospective Atari owners! Get the latest word on all this and more:

- Lynx Games - Jaguar Games
- Falcon Prices - Monitors
- ST Computers - ST Games
- Speedo GDOS 5.0 - CD ROM Products
- Graphics Programs - Desktop Publishing
- Word Processing - Scanners from $109 & Up
- Printers - Oregon Research Software
- Codehead Software - Database Programs
- STraight FAX! - FAX Modems
- Terminal Programs - Falcon Voice Mail
- NeoDesk 4 - Mag!x & Kobold
- Programming - Magazines
- Emulators - Gemulator for $99
- Repairs - Spectre 3.1
- New Toad T-Shirt - Cables
- Custom PC Systems - Atari Portfolio
- Accelerators - RAM Upgrades
- Hard Disk Drives - Tape Backups
- Diamond Back 3 - SyQuest Drives
- Atari 8-Bit Products - Music & MIDI Software
- Cubase / Steinberg - Notator / EMAGIC
- Spreadsheets - Financial Software
- Educational Software - Edit*Plus
- Mice & Joysticks - Cheap Games
- Recipes - Directions to our Store
- Beetle Mice - Our Reader Survey

WATCH FOR IT in your mail! It has a bright yellow, full color cover! You can't miss it! Also announced in the catalog are the following new services from Toad Computers:

TOADFAX FAX-ON-DEMAND SYSTEM: (410) 544-0098

TOADFAX -- a new, automated, voice activated FAX-On-Demand system -- distributes pricing and product literature to Toad customers.

Simply call the system, enter the numbers of the documents you wish to receive using your touch-tone phone. You can choose between entering your FAX number and having our system call you back, or receiving your documents on-line at the time of your call.

TOADFAX is intended to cure a common problem in today's fast paced computer market -- information obsolesence -- and gives customers a fast and easy way to check up on prices and product information.

TOADFAX can be reached by dialing (410) 544-0098 and will begin operation in mid-August 1994.

TOAD T-SHIRT: "MY OTHER COMPUTER IS AN ATARI!"

Also available is a new Toad T-Shirt! This is the first Toad T-Shirt in almost four years and it's sure to be a hit!

ON THE FRONT: My Other Computer is an ATARI!

ON THE BACK: ATARI Logos (from Catalog Cover)
Toad Computers
America's Atari Source!

The shirt is white, rugged 100% cotton. The front is in blue. The back is in full color and features various Atari logos (Fuji, ATARI, Lynx, Jaguar, TT, ST, STE, Portfolio and Falcon030 -- each in a different color!)

This rugged shirt is 100% Fruit-of-the-Loom cotton and more stylish than a hairpiece!

Small, Medium, and XL: Only $10.00!

2XL and 3XL Sizes: Only $14.00!

TOAD COMPUTERS -- HOLIDAY FESTIVAL '94 ANNOUNCEMENT!

Toad Computers is proud to announce HOLIDAY FESTIVAL '94 which will take place on December 3rd & 4th, 1994. Last year's event drew a surprise 500 people from all over the country and featured guests and exhibitors such as:

- Dave Small
- Joe Waters, Ed. of Current Notes
- Charles Smeton (STraight FAX!)

- Dave Troy (CN Columnist / Toad Co-owner)
- Tim Reyes
- MajicSoft
- Carter's Creative Computer
- Greg Ondo of Steinberg Jones

All Atari developers and user groups are invited and will be given FREE table space if pre-registered by November 1, 1994. Tables requested after that time will be $150 each. Space will be allocated on a first come, first served basis.

We'll feature free hot apple cider, door prizes and more! We'll also have another raffle to benefit Habitat for Humanity (which raised over $500 last year!!)

The show will take place at TOAD COMPUTERS in the Park Plaza Shopping Center in Severna Park, Maryland. There's unlimited free parking and lots to see and do nearby, as we're nestled between Washington, Baltimore, and Annapolis.

Confirmed 1994 attendees include:

- Tom Harker, ICD Inc. (CatBox and Star Battle)
- MajicSoft
- Binary Sounds (Hybrid Arts Product Line)
- Joe Waters, Ed. of Current Notes
- Greg Ondo, Steinberg Jones
- Charles Smeton (STraight FAX!)
- Dave Troy (CN Columnist / Toad Co-owner)

Many others are in the works.

TOAD COMPUTERS HOLIDAY FESTIVAL '94:

Saturday December 3th 10:00am - 7:00pm
Sunday December 4th 10:00am - 5:00pm

Toad Computers
Park Plaza Shopping Center
570 Ritchie Highway
Severna Park, MD 21146-2925

Voice: (410) 544-6943
Orders: (800) 448-8623
FAX: (410) 544-1329
BBS: (410) 544-6999
TOADFAX: (410) 544-0098

For MAPS, DIRECTIONS, HOTEL ACCOMODATIONS, or any other information you may need, please call us!

Keep an eye open for further developments on the show! We plan to have announcements on and in:

- GEnie - CompuServe
- Internet - Delphi
- Current Notes - ST Informer
- Processor Direct - Anything We Can Think Of

We will also be mailing postcards in support of the show
sometime in November. If you know of someone who would like
to come to the show, give us their name and address and
we'll be sure they get the information!

ADMISSION IS FREE!!!! ADMISSION IS FREE!!!

==========

NEC CD ROM DRIVE SPECIALS!

We have the best deals on CD ROM drives for your Atari! Here are some
prices on our legendary NEC Drives!

- NEC CDR25 150K/sec, +/-600ms $ 99 Portable

- NEC CDR210 300K/sec, 280ms $279 External
$199 Internal

- NEC CDR510 450K/sec, 195ms $379 Internal
$459 External

- NEC 3xe 450K/sec, 195ms $599 External
NEC 3xi $499 Internal

- NEC 3xp 450K/sec, 250ms $449 Portable

Take one look at this chart and one obvious question emerges:

WHY ARE THE CDR210 AND CDR510 so CHEAP compared to
comparable drives from NEC?

The answer? The NEC CDR210 and 510 are OEM (original equipment
manufacturer) versions of their popular double and triple speed
drives. They function identically to their higher-priced counterparts!
You might want to spend a little more to get the 3xp, 3xe, and 3xi
drives because of their sleek styling, or cool looking plastic cases,
but you don't have to! The 210 and 510 drives give you all the power
at a significantly lower price!

EXTENDOS $19
Audio CD Master $29
Photo Show / PS Pro $29/$39

CD ROM's:
GEMINI Atari CD ROM $29
Bitsream 500 Fonts $44.95
Qwikforms CD ROM $49
Project Gutenberg $29
Fractal Frenzy $29
GIFs Galore (no adult) $29

Source Code $29
Clip Art Cornucopia $29
Space & Astronomy $29

GERMAN PD CD!!! $39
GERMAN PD CD 2 $39
Winning Pictures $29
Font Funhouse $19
Font Pro Vol 1/2 $25
EPS Pro Clip Art $139
EPS Pro Clip Art 2 $139
Corel Photos $39
Sound Library Pro $25

DON'T BE FOOLED! YOU NEED AND WANT THE QUALITY OF A SCSI CD ROM DRIVE ON YOUR ATARI!

We have received a few calls from customers who say that they have seen double-speed CD ROM drives on sale for $150. Well -- this may be true, but what they are seeing are usually IDE (PC compatible) CD ROM drives without a case or power supply. The Atari cannot use the IDE drives -- you need a SCSI drive -- and they are more expensive than their IDE counterparts, due to their higher quality. Plus, for $199 you can get an _internal_ SCSI drive, but that's probably not what you want! You want an EXTERNAL drive, which almost always costs about $80 more! So, when you really think about it, the $279 you pay for an external, SCSI, high quality CD ROM drive is completely in line with the $150 you might pay for a generic, internal IDE drive!

-----> NEC CDR-210 EXTERNAL SCSI 2x DRIVE FOR $279!!!!

STReport will be branching out to Internet users in the very near future. Since I've started to avail myself of Delphi's Usenet access areas from within the Atari area, I've received numerous requests to receive STReport from a variety of Internet addresses. So, we're putting together an Internet distribution/mailing list for those who wish to receive STReport on a regular basis, and we'll UUENCODE each issue and mail it to you. If you're interested in being added to our mailing list, please drop me some mail at "dpj@delphi.com". Look for mailings to begin by the start of October. We are also considering a number of Internet ftp sites to post our issues as well. Whatever we can do to make STReport available to you. we'll try it!

4060. Re: Any voice mail software for the ST ?

Newsgroup: comp.sys.atari.st
Date: 1994-09-21 02:52:32 UTC
From: wells_s@ix.wcc.govt.nz
Message-ID: <35o75g$i7l@golem.wcc.govt.nz>
Source record: 180312

] I just bought a voice mail capable modem. I understand that I can use it
] like an advanced answering machine with the right software. Does any
] software like this exist on the st ?. If it does, would I in any way be abl
] run Straight Fax 2 at the same time?.

Coma v2.xx can handle Voice-Mail. (On Zyxel and (I think) Supra modems)).

It's English/Deutsch and is Shareware, the shareware fee being about 80DM
(From memory). It's a very impressive program, and also handles fax
and acts as a mini-BBS (works like a dial-in FTP site apparently - I
never worked this out as the doc's are in German).

Running Straight Fax as an Accessory (I think it can) at the same time
should allow faxes, but Coma does this as well. (Detects voice/fax/modem
and acts appropriately).

AFAIK It's the only program that handles voice-mail properly on the ST.

Hello! I have the following items for sale or trade:

"productivity stuff"
Codehead Utilities, release 3.....$10.
G+PLUS 1.3.....$15.
MultiDESK 2.1.....$15.
Image CAT .....$20.
Mini Office (Nicely done graphs and stuff, from UK) .....$25.
Spectre GCR 3.0 complete, unregistered, with system software and a big
bunch of disks of utilities and programs to get you started.....$200.

"fun stuff"
OIDS and PINBALL MAGIC (games).....both for.....$15.

"books"
THE GUIDE TO CALAMUS DESKTOP PUBLISHING.....$25.

Or.. how about..... All for $225.

Add $2.90 for shipping, or shipping is FREE with three or more items!
Payment forms acceptable are Check, MO, or trade for any of the items
below.
I am looking for Tracker/ST, STeno, Studio Photo, Imagecopy 2, True paint,
Warp
9 v3.80, or EdHak or who-knows-what. Let me know what you have! (please
legal only, with disks and docs) Call (303)473-0511 or EMAIL to
JApolis@nyx.cs.du.edu or jeffApolis@aol.com

Thanks!

BIOS and XBIOS *are* re-entrant, but in limited way. You must be
careful not to overflow the internal stack where the registers are
saved upon entry. But it should be no problem to make some output with
Bconout.

It replaces _the whole_ operating system, not only the AES. MagiC is a
complete TOS/GEM compatible operating system of its own, supporting
preemptive multitasking. Loadable device drivers are not supported yet.

>
>Any info you could mail me on the package? Is there a demo available, or
>can you supply me with an address (internet or otherwise)?!
>
>I'd love to see it in action too :}

Octopus is also a new, upcoming BBS-system still on it's beta-stadium which
is developed by Koos Kuil. For a demopackage you must contact him directly
since he wants to have control over who gets it. Contact him at
Koos_Kuil@textlitho.nl or 2:282/397@FidoNet.ORG.

In short, the program is fast, runs in both GEM and TOS enviroment and also
under a multitasking enviroment. It uses a scriptfile which allows you to
make your board to look the way you want.

I suggest that you take a look on a program called Neochrome 2.28.
Neochrome has some support for C, when handling sprites for example.

Casio SW Progr.zur �bertragung von Daten
zwischen dem Casio Keybord CZ101 und
dem ST �ber die MIDI Anschl�sse
Color 512 F Alle 521 Farben auf dem Bildschirm
Iconname SW F Erm�glicht das �ndern der Namen
RTC 12 SW F resetfestes Einstellen von Zeit und Datum
X Modem SW F Terminalprogr.f�r X Modem und kompat.
Grafdemo SW F einige Grafikdemos
Ram 97 SW F Ramdisk f�r 260 mit Boot Tos
Etiketten SW F Druckt Disketteninhaltsverzeichnis
auf Endlosetiketten
Munchners SW eine Pac Man Version auf dem ST
Pool SW Monocrome Billard Version

Reversi SW F ACC Spiel
Puzzel SW Puzzle am ST
46 Desk Uhr SW F Tic Tac..... Tic Tac
Gemtool SW Demo f�r die GEM-Programmierung
Harddisk SW F Treiber f�r Harddisc.Automatischer
Start von der Festplatte
Master SW F Generationsberechnung mit
frei definierbaren Regeln
Memory SW F ACC zeigt freien Speicherplatz
von A bis D und RAM
Pegasus SW Malprogramm
RCS Scann SW RCS Scann analysiert Files
Toram SW F Kopiert automatisch bestimmte
Programme beim Booten in eine RAM Disc
Disc Uhr SW F Tic Tac..... Tic Tac
RAM DISC SW F ACHTUNG in diese frei definierbare
Ram Disc kann viel mehr eingeladen werden,
als sie normalerweise fasst.
Beispiel:Anmelden mit 400 K Byte
Einladen ca. 720 K Byte ?!?!
Aufl�sung: Die Ram Disc komprimiert die Progr.

48 Fram 77 SW Statische Berechnung f�r Konstrukteure.
Sehr umfangreich
Messwerte SW F Grafische Darstellung von Messwerten
66 AGO Finanz SW F Finanzmathe: Berechnung von Zinsen,
Laufzeit, Tilgung
Assembler SW F Assemblerpaket nach M68000 Standard
inkl. 2 Pass- Assembler, Disassembler,
Debugger, Editor Zum Erstellen von
Maschinenspracheprogrammen mit 14 K. Anleitung
Mathelib SW F Eine umfangreiche Mathebibliothek f�r
Pascal, igonometrische Funktionen,
Matrizenalgebra u.v.m..Nur f�r ST Pascal.
72 Auto SW F CH Maus versperrt Zugriff
auf Desktopleiste
Protect SW F ACC Der Protector (Schreibschutz)
Levis 123 SW F Chemieprogramm aus den USA.
Mit 50 KByte Anleitung
Bikalk SW ACC einfacher Taschenrechner
Speettos SW F ACC doppelte Geschwindigkeit
beim Laden und Speichern
Tinytool SW F ACC Monitor
Epromdisk SW F Erzeugt Ramdisk von 128 und 64 K
f�r die Ablage von Programmen, die auf ein
Eprom gebrannt werden sollen.
Disklable SW noch ein Etikettendruckprogramm.
Mit �ber 100 festen M�glichkeiten.
Etiketten SW Adressaufkleber f�r Label und Briefe.

Hardcopy SW ACC unterst�tzt eine gezielte Hardkopy
(Bildausschnitt)
79 LFD ST SW F Rund um den ATARI. Stand:19.4.1986
Eine etwas ausf�hrlichere Erkl�rung
als das Handbuch.75 KByte und optimal
f�r Einsteiger.Lesbar am Bildschirm.
Aufkleber SW komfortabler Adressaufkleber Forth
Digi Uhr SW Digitale Uhr, oben rechts im Desktop
Etiketten SW Beschriftung von 3,5" Disketten
Labelprog. SW F Herstellung von Texten, Etiketten
CPM Z 80 SW F Z 80 Emulator
Folks SW F Volks- Forth 83 Einstiegsm�glichkeiten
mit sehr vielen M�glichkeiten der
Weiterentwicklung
CBRAM SW F Ramdisk

90 Adress ST SW F eine gute Adressverwaltung, die
einigen k�uflichen das F�rchten lehrt
DiskUtilitySW F Der Weg an's Directory
manipuliert L�schschutz,
erzeugt echtes IBM-Format
Solitair SW F bekanntes 'Taschenspiel' -
�berspringen von Streichh�lzern
in einem breiten Kreuz
ST Grafik SW F GFA-Grafikausgabe in Form von Kuchen und
Balkengrafik und/oder Diagrammen [sehr gut]
Boxmaster F 2 Spiele
103 Yahtzee SW Altbekanntes Zockerspiel
Disk SW Spielautomatensimulation
Calc SW Superrechner der Wienand KG

140 Tendemo F hervorragendes Zeichenprogramm mit sehr
vielen Optionen wie DEGAS ELITE

141 Tridemo SW wie P.D. Nr 140
156 Syntw K 1 SW Originaldiskette von Steinberg Res.
Eine Slideshow zeigt, was das Originalprogramm
Syntworks K 1 kann. Ca 30 Minuten Laufzeit.
1 MB erforderlich.
Schieber SW ein alter Rechenschieber.
Slalom SW Geschicklichkeitsspiel
Skiabfahrtslauf in 4 Stufen.
Three GM SW Drei Spiele: 1.Kalah 2.Memo 3.Solitais
177 Roulet SW Wagen Sie den Schritt in Ihr privates
Spielkasino.
Eleganz und Kapital vorrausgesetzt.
Lohnsteuer SW F Lohnsteuerberechnung.
Maxidisk SW F !!!!! nur altes TOS
TOY Prolog SW F V 4.8 mit Source
Ansicht SW F sehr beruhigende Strichdemo.

Monodemo SW sehr beruhigende Strichdemo.
Doodle + SW F einfaches Malprogramm. Erkennt
alle g&#65533;ngigen Formate.
183 Bridgeit F Strategiespiel f&#65533;r 2 Personen.
CH Time SW F GFA Uhr stellen.
CLR Demo SW GFA Programmiervorschl&#65533;ge.
Dir SW F GFA Checkt Disketten nach Files und Folders.
ED Sprite SW GFA Sprite- und Mouse-Editor
GFA Mice SW Spiel GFA Nicht 100% lauff&#65533;hig.
GFA Shell SW F GFA, zum besseren Handling beim Arbeiten mit
Compiler
Globe F GFA-Demo zeigt schnellen Aufbau von 3 D-
Kugeln
Kalender GFA Kalender nach Wunsch!!!
Master F Mastermind (Superhirn) Stragespiel GFA
Microcard F GFA Zeichenprogramm
Pacman F 2 Pacman Versionen GFA
Scorfour F Vier Steine in einer Reihe GFA
Sensori F Spiel GFA
States F Strategiespiel GFA
TI TA TO SW GFA 3D Tic Tac Toe mit vier versetzten
Brettern &#65533;bereinander. Alle Bretter werden
gleichzeitig gespielt. 1 oder 2 Spieler.
GFA Basro SW F 41261
192 ST Klick SW F Notiz, Wecker, Schreibmaschine, Rechner
Kalender mit Tagen und Monaten, Druckeranp.
Mac Pan SW Der alte PAC MAN aus der Spielhalle.
Term SW Umfangreiches Terminalprogramm
X Ref SW F Anpassung von C Programmen, die f&#65533;r andere
Rechner geschrieben wurden.
Invaders SW Eine neuere Umsetzung des alten
Spielhallenspiels.
Andruil SW Geschicklichkeitsspiel mit 75 Bildern.
Diamon SW Vielseitiges Spiel mit 30 fertigen Levels,sehr
schneller Grafik und Feldeditor.(Boulder Dash)
Minefilds SW wagemutiges Spiel in einem Minenfeld.
Data Text SW Datenverarbeitung
194 Sprache SW F Softwarem&#65533;ssige Sprachausgabe
ZeitmanagerSW GFA Sehr &#65533;bersichtlich und gut durchdachtes
Zeitplanungskonzept. Super
Carpet SW Berechnungsprogramm von 3D-Funktionen.
Hiddenline,Algorithmus und Beleuchtungseffekten.

3 D Plott SW Berechnungsprogramm von 3D-Funktionen
mit einigen Extras.
Funktion SW Plotterprogramm mit verschiebbaren Achsen,
mehrere Darstellungsarten m&#65533;glich.

Tops SW F The Other Pascal Shell (Pascal Plus)

198 RCS ICN SW Icons einfach erstellen.Bildschirmbereiche
werden einfach umgewandelt in Icons.
Anlage SW Anlage / Aktien / Investmentverwaltung
Depot SW Aktiendepot
Aktie SW F Aktienverwaltung
Regelpro SW Simulation einer Regelstrecke
Berechnung und grafische Darstellung.
Schaltplan SW elektronische Schaltpl�ne mit Hilfe von
Schaltsymbolen selber entwickeln.
Rotax 4.0 SW Animation und Rotationsprogramm von 3-D K�rpern
Pic Switsh F V0.5 Darstellung verschiedener Bildformate.
RSC INN SW F Ausschneiden von Bildschirmausschnitten,
zur Weiterverarbeitung zu ICONS
200 Poster SW Druckt ein Bild in vierfacher Gr�sse.
Ausdrucke lassen sich dann zu einem Poster
zusammenf�gen.

ZS Editor SW Zeichensatzeditor f�r 24-Nadeldrucker
(P5/6/7 und andere). Down-Load Zeichensatz.
Basic Ref SW Crossreferenzprogramm f�r GFA-Basic.Hilft
mit vielen Optionen, Fehler aufzudecken.
Incl.Source in GFA-Basic.
MSK Edit SW GFA Maskeneditor f�r GFA-Basic.Generiert mit
einfacher Bedienung eine komplette
Eingabemaske als Quelltext (Form Input).
Retten SW Fortran. Speichert zu lange Dateien in mehreren
Teilen auf verschiedene Disketten.
Seco SW F GFA Verwaltet Bildausschnitte (mit GFA-
Basic-Befehlen PUT GET verwendbar) und
f�gt sie zu Bibliotheken zusammen.
World SW Lernprogramm. Fragt alle L�nder und
Hauptst�dte der Welt ab. Dabei erfolgt die
Antwort per Mausklick.
Enthaltene Landkarten: BRD, USA, Ozeanien,
Mittelamerika, S�damerika, Europa, Asien.

Kreuzwort SW Generiert Kreuzwortr�tsel.
203 Imperium SW Kaufen und verkaufen von �lfeldern, Pumpen,
Tankwagen.Nat�rlich ist auch Sabotage
enthalten.Wettbewerb vorrausgesetzt.
F1 Manager SW Sie m�ssen einen Formel-Eins-Rennstall
verwalten. Ausr�sten von Autos, Verpflichten
von Rennfahrern und einiges mehr geh�rt dazu
BOLO SW Wahrscheinlich die beste Arkanoidumsetzung
Columbia SW Malprogramm mit vielen Optionen.
Kermit v1.1SW F Datenfern�bertragungsprogramm

204 RAM SW F ACC zeigt freien Speicherplatz.
Paintlux SW Sehr umfangreiches Malprogramm. 3
Ein Muss f�r jeden Monochrombesitzer.
Inhalt SW Erzeugt eine Index-Liste von 1st Word-Texten.

Kopieren Sie einfach alle W�rter,
die ber�cksichtigt werden sollen, in eine
Datei."Inhalt" f�gt nun die Seitennummer an.
Index SW Programm zur Erstellung einer Seitenindexliste,
alphabetisch sortiert, Liste aller Zeilenlineale
und aller Bilder. Weiterhin wird ein Lexikon
aller vorkommenden W�rter erzeugt, mit Wortfilter.
BT Konvert SW Konvertiert 1st Word-Texte nach Becker-Text.
Incl. Sonderzeichenumwandlung und Schriftartanpassung.
Type SW Schreibmaschinenkurs in �ber 40 Lektionen.
Von einzelnen Buchstaben bis zu ganzen W�rtern
werden Aufgaben gestellt und bewertet .
Plotter SW F Darstellung von Werten in Diagrammen.
sehr aufwendig und vielseitig.
Morse SW F Morselernprogramm, mit Angabe der T�ne,
und Abfragen der Buchstaben und W�rter.
206 L Painter SW Malprogrgramm Rasteroperationen, Musterspray,
Verwischen, Drehen, Biegen,
Blockladen und Speichern, Fontloader.
Minigolf SW 18 Bahnen , Steuerung per Maus
Richtung Anschlagst�rke. Sehr Gut !!
Solit�r SW Dreidimensionales Solit�r mit guten Grafiken
Deutsch und Franz�sisch.
Roulette SW Was mag das wohl sein?
Surface SW einfache aber sehenswerte Strichdemo
Mazemaker SW F erstellt ein Labyrinth.
Setmaus SW F ACC Mauseinstellung 3 fache Geschwindigkeit,
CAD SW Student CAD nur altes TOS
Gut gestaltetes CAD Programm mit vielen
guten Optionen.Vergleichbar mit kommerziellen
CAD Programmen.
209 Schloss SW F Textadventure
Squixx SW Altbekanntes Spielhallenspiel f�r Maus
und Joy-Stick.Ziel:F�llen von Fl�chen
im Kampf gegen Steinbeisser.
StundenplanSW F erstellt Stundenplan nach Wahl.
APPLE ST SW F �bertragen von Textdaten zwischen ATARI ST
und APPLE �ber v 24 als GFA BAS + PRG.
Cartoon SW einfaches Zeichentrickfilmprogramm.
Erstellen von Animationen m�glich.
MIDI Mus SW MIDI Programm 1 MB und Keybord erforderlich
sehr �bersichtlich und professioneller Editor.
Einspielen �ber Keybord, Noten ausdrucken.
Erstellt f�r Yamaha PC R 800.

210 Kreuz AS SW Eine sinnvolle Art, mit dem Computer zu
spielen, ohne einen Pfennig Einsatz.
Nachahmung des gleichen Gl�cksspielautomaten.
X Modem SW F Datenfern�bertragung

AMIGA Demo F 100% Funktion wird nicht gew�hrleistet.
Spriter SW Sprite Editor
Denk Mal SW es weden Farbe und Ton vorgegeben, und
sollen nachgespielt werden. 3-6 Felder.
Deconv SW Deconvolutionsprogramm zur Bestimmung
von Abklingzeiten.
Bilanzen SW Kontenverwaltung mit Monats,-Jahresbilanzen,
Balken und Kuchengrafiken,sehr �bersichtlich.
Dakar Sw Dateiverwaltung
Rechnen SW F Wirtschaftsrechnen f�r B�rokaufleute.
Funktionen:Zeiteinheiten, Z�hlmasse,
Englische L�ngenmasse,-Gewichtseinheiten,
L�ngenmasse, Gewichte, K�rpermasse,
mathematische Berechnungen, Datenumwandlung,
Zinzrechnung, Dreisatz, Lagerkennzahlen,
Buchf�hrung, W�hrungsrechnen, Prozentrechnung,
Diskontrechnung, Kalkulation, Verfallzeit
Durchschnittsrechnung, Kurswert,u.v.m.
Auf jeden Fall zu empfehlen.
Zeichen SW F Grafikprogramm f�r alle g�ngigen Formate,
mit vielen neuen Funktionen und neuen Ideen.
Z.B.Ordner erzeugen, sroll, 4 Spiegel,q
Spiegel, Mausi, Gag, Effekt (horizontal-
vertikal), Tausch, Peil, Baum, Rahmung,
Kantenform,Mausiform, M-Kreis, Hardcopy.

216 Deskblue SW Gibt dem Desktop ein neues Gesicht.
alle Programme laufen einwandfrei(4 Wochen Test)
Lotto SW F Lotto Analyse. Chancensteigerung durch
Analysierung aller vorhergegangenen Ziehungen.
Eingabe der folgenden Ziehungen m�glich.
Morsen SW F Morsen �ber Centronics-Schnittstelle.
Erweiterung f�r Funkger�t ist m�glich.
Senden von Buchstaben, Kennung, Zeilen u.Dateien.
Morse ST SW Morsetrainer (nicht 100%, aber sehenswert)
Picsw 0.7 F Darstellung und Drucken von Degas PI1-PI3,
NEO, Tiny, NVision, Amiga IFF, Mac Paint,
Mac Startup, CIS Vidtex und alle Atariformate.
QTH LOC SW Programm f�r Funkamat zur Festestellung der
QTH Kenner.Sehr sch�ne Grafiken und Karten
Ratte SW lernende Ratte in einem Irrgarten
REM EX SW F Entfernt REM aus GFA Basic Programmen.
Mazemakr SW F Erzeugt ein Labyrinth f�r Bildschirm u. Drucker
M Help SW F ACC Hilfsprogramm mit den Funktionen:
Disk Formatieren, kopieren, Ordnernamen �ndern,
Disknamen �ndern, Directory drucken.
Netz SW Bestimmen Sie die Gr�sse einer Netzlandschaft.
Kprinter SW F Kassettenh�llendruckprogramm f�r Audiokassetten.
227 Sammelsorium der gebr�uchlichsten Accessories mit ACC Loader

Weller ToolSW F Setup. Auto-Programme, Accessory Auswahl,- und
Lade-Programm mit sehr vielen sinnvollen Infos.
PD; V.1.4; 1.8.1989; Autor: Clemens Weller
Calc SW - ACC Superrechner der Wienand KG mit ca.280 Funktionen
PD; V.3.0; 1986; Autor : M.Weller
MM Copy SW F ACC Filekopierprogramm von Laufwerk A bis H.
PD; V.1.0; 1986; Autor: K.Ullmann
Setmaus2 SW F ACC Ver�ndern der Mausparameter wie z.B.
Geschwindigkeit,Doppelklick auf der rechten Taste u.s.w.
Sideklick SW F ACC Multi ACC mit Taschenrechner, Terminkalender,
Kalender, Uhr, Wecker, Notizblock, Zeichensatz,
Disk Index Druck und Puzzle.
PD; V.1.0; 1986; Autor: ROS-Soft / H�hn & Ullmann
ST Klick SW F ACC Multi ACC mit Notizblock, Wecker, Drucker Init,
Schreibmaschine !!!, Kalender und Minitaschenrechner.
SHW; V.1.4; Autor: W.Zweygart
Word 400 SW F ACC einfache Textverarbeitung.(sehr sinnvoll)
PD; V.2.0; Autor: F.Gregory Schneller
Bigmacc SW F ACC Multi ACC mit ein oder zweiseitiges Formatieren
Kopieren A-A/A-B/B-B, Filecopy, Uhr, RAM Disk (einst),
RAM Disk laden, F Tasten Belegung und Spooler
PD; V.1.1; 1987; Autor: Marco van Meegen
Clock SW F ACC zeigt in einem Fenster die Zeit Analog an
CRT Saver SW F ACC Bildschirmschoner, schaltet den Bildschirm
nach einer einstellbaren Zeit dunkel.
PD; V.1.0; 7.1986; Autor: ASSoft
DIR Print SW F ACC druckt das Inhaltsverzeichniss (DIR) von A & B
PD; V.1.0; Autor: John Kurvink
Diskhelp SW F ACC mit den Funktionen: l�schen, kopieren, rename,
format, sortieren, tauschen und Ordnerh�ndling.
PD; Autor: Helmut M�nsch / Karl-heinz Wilder
DOLU SW - ACC Mauslupe. Vergr�pert den Bereich des Mauszeigers
ca. um das 16-fache in einem eigenen Fenster.
Freeram SW F ACC zeigt den derzeit freien Speicher an.
Info Box SW F ACC Speicheranzeige, Inversschaltung, Mausklick
ein und ausschaltbar, Weckereinstellung, Uhr.
MAD SW F ACC wahrscheinlich das verr�ckteste ACC �berhaupt.
Es passieren die unm�glichsten Dinge mit dem Desktop
M Help12 SW F ACC Multi ACC mit Formatieren, Kopieren, freiem
Speicher, Ordner �ndern, Disknamen �ndern, DIR Druck.
PD;V.1.2; Autor: Holger Brieger
Show RAM SW F ACC zeigt den derzeit freien Speicher oben rechts an.
Start Up SW F ACC er�ffnet die M�glichkeit ein PRG aus der
DeskTop Leiste zu starten. Witziger Bildschirmschoner
Supercalc SW F ACC einfacher Taschenrechner
Uhrzeit SW F ACC zeigt oben rechts die Systemzeit an.
PD; V.1.1; 7.2.1987; Autor: Dietmar Rabich
Software SW - PRG zur Erstellung eines Softwareverzeichnis.
PD; V1.0; Autor: Horst Fabry

240 STDCAT SW F Disketten-Katalog-Programm in GEM
FRW; V.4.0; 15.10.1988; Autor: Bob Silliker
Drucker SW F Druckereinstellung f�r Seikosha SP 1000 A
und Epson Kompatible. Sehr viel Optionen, wie z.B.
verschiedene Schriftarten, Grafik und Hardcopyausdruck,
Puffer, 10 verschiedene intern. Schriften, u.s.w.
PD; V.1.0; 23.3.1989; Autor: Siegfried H�bner
Fupball SW - Simulation der Fussball-Bundesliga. Sie sind der
Manager eines 3.Liga-Clubs und sollen Meister werden.
PD; V.1.61; 1988; Autor: Reiner Duda
Termin SW F gelungener Terminkalender mit kompl.Jahreskalender
incl. Feiertage auf einer Maske, jahres�bergreifende
Terminplanung, Suchfunktionen, Hilfsfunkotionen u.v.m.
PD; V.3.2; Autor: Siegfried Weckmann
P TAP SW professionelle Fupballbundesligaverwaltung
SHW; V.1.0; 1987; Autor: 2 S Ware

4078. ST Flowcharting Utility?!?

Newsgroup: comp.sys.atari.st
Date: 1994-09-21 13:39:34 UTC
From: mforget@elfhaven.ersys.edmonton.ab.ca
Message-ID: <2e808c00101ba@elfhaven.ersys.edmonton.ab.ca>
Source record: 180169
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

Does anyone know of a flowcharting utility for the ST? I'm finding that
I'm rapidly becomming aggravated with the pencil-and-paper method. It
just does not look very good. The only requirements that it must meet
is that it must support annotations and horizontal case/switch statements.
Any other features, like GDOS support, are a plus.

Thanks...

For a ST master & a PC slave unit look for GHOSTLNK. The only problem is
that the PC has to have partitions < 32 meg.

Just an update here... I found out (thru Teradesk) that it's running TOS 1.00. Yikes! Yep, the joys of not being able to rename folders! Are there fixes for this - or more importantly - is there some ST operating system that can be booted off of a floppy and bypass TOS?
Or do I have to buy a new ROM. Sigh.

If the screen kind of flickers and showing stripes all over, the problem may be the cable from the monitor. Try to move the cable and the connector a little, if it gets better/worse, get a new cable.

Hi Everybody,

Can anyone offer some advice here - I'm in desparate need of a COBOL compiler for the ST. I know HiSoft still sell Nevada COBOL, but it runs under the old CP/M emulator, and to be honest, I'd rather not! :-> Two questions:

1 - Is this the only COBOL compiler available for the ST Range?

2 - Has anyone actually used Nevada under the emulator? Is it any good - what's the compilation speed like, etc.

Thanks for any help you can give me here! :->

Cheers,
Frank.

Yes, use a disk editor and alter the filename of the directories (you
need to search for them to locate dir directory block where they are).
There is a special character first in all deleted file names (I'm not
sure what it is, but look for another deleted file and you'll see it).
After you have altered the first char in the name the directoty is gone
(but it may still occupy some blocks so you'd better optimize the disk)

Peter,

You could try deleting them with the demo of Kobold. I know it will
delete 0k files that I can't delete using normal methods.

The demo is available on Internet. If yo cant find it let me know and I
will email it to you.

Good luck.

Hey Tom,
I found it in the atari/8bit/Xfs area on umich.edu.
Thanks for the help tho.... Next question... Does anyone
know of a utility to transfer 8bit software onto one of
the XFD files? I would rather use my direct connect to get
files and transfer theem into one of these (drive) files.

Thanks,

Lannie

4090. Assembler Graphics Help please

Newsgroup: comp.sys.atari.st
Date: 1994-09-22 14:36:03 UTC
From: rrk@vixen.cc.bellcore.com
Message-ID: <35s4oj$msi@athos.cc.bellcore.com>
Source record: 180332
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

My assembler tutorial in ST Format tells me that a
32 by 32 pixel sprite requires 20 bytes in each line (low rez),
for 32 lines. I keep calculating 16 bytes (or 8 words) in each line,
not 20. I figure each of the first 16 pixels needs one bit in each
of four contiguous words (four planes for color). Similarly
I figure the next 16 (now 32 in all) pixels need four more
contiguous words. A total now of 8 words, or 16 bytes.
Could the fact they are using OCP Art Studio have something
to do with the need for 4 additional bytes? Or is there yet
another detail I'm neglecting?

Thanks.

Hi all,

Well, it looks as if my old monochrome monitor finally gave up the ghost
(smoke, flames, piericing cries of terror, utter panic, you get the picture).

Anyone have a *good* SM124 or (insert whatever that new model is called) they
wish to sell? Looking for something with a good picture, no distortion or other
problems...

Thanks!

|-! -David Butler- dhbutler@magnus.acs.ohio-state.edu

"To my mind the most frightening book ever published is Lewis F. Richardson's
'Statistics of Deadly Quarrels'. You've probably never heard of it even though
its relevance to the mess you're in is at least as great as that of Darwin's
'On the Origin of Species,' which you learned about in fourth grade. And that's
because it's so completely terrifying only those 'experts' who are adequately
armoured with preconceived contrary ideas which will enable them to disregard
Richardson's work completely ever get to study it."

Try Programming/c_say.zoo on atari.archive (or it's mirrors).

I haven't actually tried to use it, but it seems to be a simple phoneme based
speech system in C.

Hope this helps,

: > Anyone any ideas - i'm loathe to use a cli to run GCC.

: I don't use this shell myself. In fact I'd be loathe to use anything
: *other* than a CLI with GCC!

It's O.K. - i found the probelm:

I tried to set up the system using;

gcc258b.zoo
utlbinb.zoo

plus the libs(98) etc.

The problem is that this set up lacks ONE IMPORTANT binary file -
gcc-as.ttp

Way back I hit the same problem, and opted for 1.37 which has every
file.

Remedy - take gcc-as.ttp from the gcc233b.zoo archive, and everything
works luvely.

GNUSHELL is also real neat and shall be registering shortly.

I'm now going to try it under Geneva - a reasonable commandline/MTOS
setup is too slow on my STe.

Steve

As far as I am aware, the software will run on the Falcon. However I have
read in several mags that getting MIDEX to work on a Falcon is, if not
possible,
then difficult, involving hardware hackery. This is because the Falcon
cartridge port is wired differently to the ST. Steinberg apparently
have a much more expensive Falcon compatible "replacement" for Midex.

btw Emagic solved the problem by putting as ST compatible cartridge thru
port on the Log3 dongle/output expander. You plug your Unitor II or whatever
into the Log3

From: selick@acs4.bu.edu
Message-ID: <35sm87$o4i@news.bu.edu>
Source record: 180203
Cross-posted to: misc.forsale,nj.forsale,ne.forsale,comp.sys.atari.st

My brother is selling the following Atari ST hardware. He will consider breaking it up, but would rather sell the whole package for $600. Breakup prices are included next to each item. Please respond to <selick@itt.com>

1040 ST - Tos 2.06, 1 meg ram, dsdd 3.5" floppy drive. Includes PC-Ditto II board which is not connected because it made the ST intermittant (note: the ST is absolutely solid without the pc-ditto board installed!) $175

SM124 monochrome monitor - $65

SM1224 color monitor - $100

150 meg MFM hard drive subsystem - includes Supra SCSI host adaptor, Adaptek 4000 SCSI -> mfm controller, and 1 Maxtor 150 meg MFM hard drive with 28 ms access, power supply, and a homemade case. Assembled, and ready to run! $175

Spectre GCR 3.0 with Mac 128k ROMs - $150

Okidata 92 9 pin printer - $65

Please feel free to make offers if you don't like the prices. Again, he will happily take the first $500 offer for the whole lot!

Call Bill eves until 10pm at 201-569-8421. Items are located in northeastern NJ. Prices do not include shipping. Please discuss terms with Bill.

Has anyone had any problems at all running Medium Net? It work's just fine on my Falcon, but fails completely on my Mega ST4, bombing out as soon as it boots.

I can't even get my Connect program to dial properly. I only have the non-registered version, but I should think it would work- isn't there just a time limit for the demo version?
It looks really great, but I use "Storm" now, since it works!
Can anyone help me?

The best solution is to buy Cleanup ST by ICD or Diamond Edge. The next
best thing you can do is try various combinations of copying files
or folders with the same name onto the file you cannot delete. Sometimes
it works, sometimes not. Try this in various combinations.

Good luck.

Actually, in theory, you can get much faster port rates on the Falcon,
except that they would certainly be too fast for the Falcon's bus structure.

I can set the port to 230000 bps, but I have yet to actually test it.

What version of NeoDesk 3 do you have? (3.03, 3.04, etc.) That makes a
big difference. Though, ideally you really want NeoDesk 4, which is
MultiTOS aware and has multitasking support.

I was wondering if anyone has used GEMULATOR on a notebook yet.
Does it fit? How is the mouse/joystick support?

Are there any plans to actually release a Falcon notebook? Or
ANY notebook? I got tired of trucking my 520STFM to and from school,
so I broke down and bought a PC notebook when I entered grad school.

Of course it meant no money for a Falcon...

And finally, does anyone know if Atari will release the Falcon
in a separate CPU/keyboard option?

Thanks...

From: messina@rimmer.lanl.gov
Message-ID: <MESSINA.94Sep22163046@rimmer.lanl.gov>
Source record: 180348

Hi,

I need to sell the following two Atari ST setups ASAP.
I'm moving to California next month, and won't have room for these.
I had planned to use these for MIDI work, but that will have to wait.

System 1:
Atari 1040 STf with marpet memory board installed. TOS 1.04
1Meg RAM (4 256k SIMMS) 4Meg RAM Max (4 1M SIMMS)
Fairly new DSDD floppy.
Atari PS3000 color monitor and SS drive.
40 Meg SCSI hard drive with ICD adaptor.
Warp 9 installed on HD.

System 2:
Atari 1040 STf with 1Meg RAM. TOS 1.0
Atari SM124 Monochrome monitor.
Hybrid Arts/Barefoot/Binary SMPTE Track sequencer with SMPTE reader/writer
Old version of software, but syncs very well, even on 4-tracks.

Free to whomever buys one or both of the above systems:
Gravis mouse stick
cheap printer

Prices (buyer pays shipping):
$260 for system 1
$125 for system 2

or
$330 for everything

Everything seems to work fine, although I really don't have much experience
with ST's.
I will consider all offers, selling parts, and mixing up the packages.
Local buyers and fast deals will get preference.

Offers and questions to messina@killdeer.lanl.gov

Later,
Mike

4108. ST Internet Address List

Source record: 180224

Hi Everybody,

I'm busy compiling an "Atari Internet Address List" for possible use within ST Format and .net magazines, containing the email addresses and information about contacts in the Atari world. It would be a great help if anyone would like to make suggestions and contributions to this list, which will also be distributed in ASCII and one or more Hypertext formats through the usual ftp sites.

You can contribute by emailing me with details of any person or organization you think should be included, whether they be a BBS SysOp, Developer, Shareware programmer, Corporation, or just all-round good guy and source of knowledge :-> Just drop me an email with any suggestions and/or information you have, and let me know who you think should he included.

Oh yeah, I hasten to add that this isn't something I'm being paid for by any magazine or body - it started as a labour of love, which will also be useful to some of the other guys I work with, and hopefully it might be of some use to everyone at one point.

Get in touch! :>

4109. Spectre Meltdown

Newsgroup: comp.sys.atari.st
Date: 1994-09-22 23:30:01 UTC
From: gbernath@oucsace.cs.ohiou.edu
Message-ID: <CwK1A2.DEo@oucsace.cs.ohiou.edu>
Source record: 180350

After going outside for an hour whilst the computer was left on, I returned to the delightful aroma of fried electronics in the air. Luckily the computer was intact, but the Spectre GCR had gone up in smoke. Though there was no visible damage, it no longer functions. The "happy mac" icon always get followed immediately by the blinking disk eject symbol, and everything freezes. Popping in the other set of ROM's I had around didn't help, so I conclude that the chips controlling the floppies are now hosed.

Since for all practical purposes Dave Small does not support Spectre anymore, I have to call the unit a total loss (all the chips are soldered in, and I don't know which ones are bad).

In summary, I have all the various Spectre pieces for sale cheap, make on offer. Though if you want the manual, you'll have to prove to me that you actually own a Spectre unit.

>Can anyone help me?

You need to set your modem options. I cannot recall exactly which of the
options it is, but you can get to all of the modem options through the
two icons in the dialer on the right hand side of the bottom row. The
ones with the arrows. Make sure it is all set to work with your
modem configuration.

I can tell you, though, that the unregistered version DOES work. Not
too long ago someone else experienced this same problem. It does work,
though, and it is well worth trying. You'll never use anything else
again.

> Can anyone help me?

Make sure that within the Dial dialog, in the second modem config dialog (where you can set the reset string, dial string, etc.), that the dial string looks like:

ATDT#|

or something similar. The "#" stands for the number to be dialed, the "|" is the carriage return. This messed me up for awhile when I first got CoNnect. Hope that helps.

BTW, CoNnect has lots of nifty features that one cannot really figure out from the help pages (as least, I couldn't :-). The manual one gets when registering really opens up this program.

Hi,

I dont' know what Dynamic SLIP is either.
But SLIP with MiNT and MiNT-NET is very fine thing to do.
You have every important client and daemon, as ftp, telnet, rsh, rlogin,
finger, ping, udpprobe. I even tried www with a lynx port, but the
with the originate vt52 on the ST isn't working so fine.

What do you need?

- MiNT (a patched version of 1.10 or 1.11)
- MiNT-OS (a BSD init an login packet of Steven Usher,
1.4.1 is up to date)
- MiNT-NET (0.53 is the current version)
- and the clients for the services you wants to use.

Where do you get all this things?

for example atari.archive.umich.edu (try ftp msdos.archive.umich.edu
and then change to Atari)

cu, michi

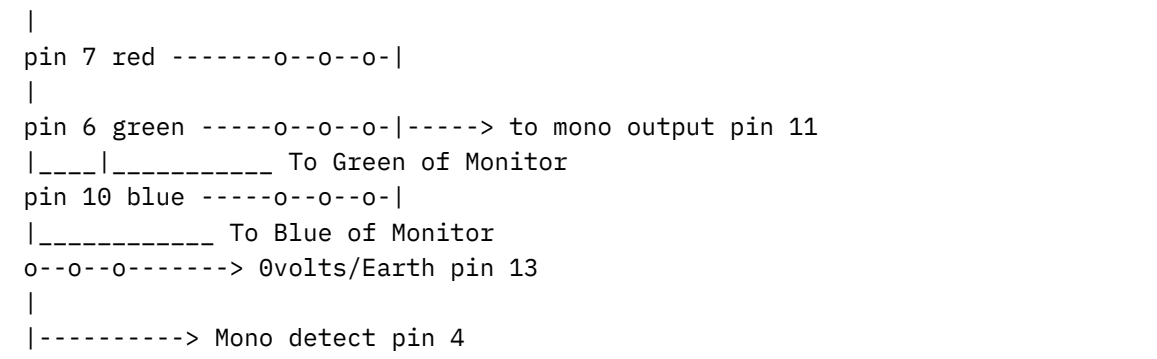
Well the Atari does push out some 1 volt pk to pk, some monitors
don't like that, they work on 0.75 volts pk to pk..

So fit very small 1/8w resitors in the monitor plug, 3 * 22ohms I used
from memory, but must be in the monitor plug at the back of the monitor,
otherwise bandwith will suffer, they go in each R.B.G Inputs...



This is a 2 way 4 pole change over switch, 3 switch contacts are shorted
to gether and go to the mono output pin 11, as I have tried to show here...

Please e-mail me if you are still having problems....

4121. Topaz

Newsgroup: comp.sys.atari.st
Date: 1994-09-23 12:02:38 UTC
From: diehl@io.org
Message-ID: <35ug4u$g4l@ionews.io.org>
Source record: 180236

Recently, I got a game called Topaz from the Wuarchive FTP site. It was supposed to be an Archon clone -- something I've been looking for for ages. In any event, once I loaded it up, I was greeted with what _seemed_ to be a fairly English title screen... after that it went to the main menu ... and the original title music from Archon blared -- which impressed me. However, from then on, everything was in German. And unfortunately, it seems that many parts of this game rely heavily on text. (i.e. it sometimes asks you some sort of question in German, which you must answer in order to get to that square)
Was there ever an English version of this game made? If so, where could I find it? And if not, is there anyone who'd be willing to translate it? I could fairly easily extract the text portions of it and E-Mail them to any kind soul who'd be willing to do a bit of translating ... I'm dying to give this game a go, since it looks like a souped-up version of the original Archon, but still looks bloody great, but in its present form, sadly, I can't, not knowing a word of German beyond Fahrvergnugen. :-)

Any help would be most appreciated.

Can anyone give me a full breakdown of the AIFF sound sample file format as implemented in Cubase Audio? Several people have requested I add it to my sample editor (SuperSam), but I am unable to find a description of it.

Is there an email address for the people who wrote/released Cubase?
Thanx,

You can "repair" the boot sector using Norton Disk Doctor. NDD fixes
the boot sector, but leaves your data intact. At least that worked for
me, I used NDD version 4.5. Of course it is best to try first with an
unimportant disk.

Here is the Doc file, should answer most questions <g>

TTYL

John

---------------------------------- Snip --------------------------------

Ghostlink v1.02 Beta 02/05/94 Copyright Bitz 1994

What is ghostlink:
------------------
Ghostlink is a link between an Atari GEM Computer (Master)
and a MS-DOS computer (Slave)
It allows the drives (floppy, harddisk, CD-ROM) installed
on the slave to be used by the master as a GEM-partition.
It is possible to connect up to 3 PC slaves (on different ports!)

So, you can, for instance, import a picture stored on a CD-Rom
(connected to a MS-DOS PC) into Calamus!

Connection:
-----------
A simple nullmodem cable is required.

Installation on ATARI:
----------------------
Run the program STMASTER.PRG

1. Select port & speed
On the left you see 3 channel boxes.
Set the wanted port and speed for channel 1:

- STANDARD All Atari's (ST/STE/TT/Falcon)
The standard TOS routines are used.
Select port & speed in the control panel.
(Select 8 bit, 1 stopbit, no parity, no flowcontrol)
```

- SERIAL 2 Only MEGA STE & TT
Speed: 300/600/1200/2400/4800/9600/19200
38400/57600/115200
On a MEGA STE, do not use more than 57600 Baud

- MODEM 2 Only MEGA STE & TT
Speed: 300/600/1200/2400/4800/9600/19200
38400/76800/153600
On a MEGA STE, do not use more than 57600 Baud

- MODEM Only Falcon
Speed: 300/600/1200/2400/4800/9600/19200
38400/57600/115200

2. Select the partition ID's
On the right side is the partition box. Double click on existing
entries to edit them, or click on ADD to add an entry.

Editing a partition entry:
- Select a local drive ID (this is the drive-letter used by
GEM to access the slave).
- Select a remote drive ID (this is the drive-letter used on
the slave computer).
Here you can also select "All existing drives"; this means
that with 1 local drive-ID, you can access all the remote
drives (the remote drives are showed as folders in the ROOT
directory).
- Select a channel (take 1).

3. Click on Save to save the settings, this will avoid you to select
all settings every time the program is runned.
(Note: the settings are saved directly into the program!)

4. Click on install. The program will quit but remains resident.
Just install the icon(s) for the LOCAL partitions on the desktop.

The program can also be installed in the AUTO-folder, this way
the dialog does not appear (select & save settings before).

Installation on MS-DOS:

Run the program PCSLAVE.EXE

1. Select the port with keys <1> = COM1 <2> = COM2
2. Select the speed with the function keys 1->10
300 -> 115200 Baud
Of course, the speed must be the same as the master speed!
3. So, thats all, as long as the slave is active, you'll have
access to it from the master.
4. To quit, press escape (access is terminated).

Use:

Use it the first time at low speed, to avoid speed problems.

The data that is transfered is CRC32 controlled, so when a
datablock send by master or slave has errors, it is send
again (this as much as needed). So, if a computer is to slow,
or in other words the transfer speed is to high, the system
will lock up. In that case hold CONTROL/SHIFT/ALTERNATE on the
master (Atari) and the transfer will stop with an ERROR code.

If on the MS-DOS screen, command tracing is ON, you can watch all
used GEM-DOS operations (very interesting). Here you also can see
the errors. MASTER ERROR means the master recieved a datablock with
checksum error (Master to slow?) and SLAVE ERROR means the slave
received a bad data block (Slave to slow?).

Notes:

What does not work:
- Renaming a folder on the slave. (difficult to do under DOS)
- Starting a program (.PRG of course) on the slave.
(maybe in the next version...)

What's next:
- An Atari Slave program, to connect Atari to Atari
- More ports support (midi, parallell)
(I am really curious to see the parallell speed...)

This is a beta-version, Bitz does not take any responsability
for dammage occured to hard- and/or software by using this program...

If you have any suggestions, bug-reports or whatever, or if you are
interested in a full working version, contact me:

Z>

I've had the same problem. I solved it using a disk-editor and STZip 2.6!
Start the disk editor and search for the folders you wish to delete. Replace
the first letter of each directory with a • (ASCII 229) and save the sector.
When you look in the directory in desktop the directories still exists. Now
start STZip 2.6. In the disk directory in STZip the directories you have
"deleted" will not exist. Now create new directories with the same names as the
old ones in STZip. If you then go out to desktop you will see !TADA! that you
now can delete them.

TT-RAM is faster than ST-RAM because the coprocessors don't have access
to it. Then, adding TT-RAM wouldn't allow greater video modes. However, some accelerator
boards speed up the bus, and THAT allows better resolutions. Watch out for these cards...

==========================================================================

....... Is Coming Soon to a FALCON near you!

TOWERS II, is an RPG for the Atari Falcon 030 computer.

It features:

--> Smooth Scrolling.

--> Window (168x110) or full screen (320x200) movement.

--> Runs in True Color mode, and makes good use of color.

--> Plays MOD music at 50 Khz Stereo.

--> Sounds effects are in stereo.

--> Over three times the size of Towers for the ST.

--> Can be launched from MultiTOS or BlowUP.

--> Requires appx 2megs of Free RAM and 4megs of HD space.

--> Can run on a VGA monitor, RGB monitor, or TV.

--> Powerful spells and weapons.

--> Real-time combat.

--> And much more...

TOWERS II, is being released as a 'Try Before You Buy' product. You can

progress through several levels before you need to order the manual.

The Manual will Retail for only $24 US, and will be available directly

from us, or through participating resellers.

Date of release should be around late October, 1994. Screen shot TIFFs
```

have been released on several boards. Look for 'TOWRSIIP.ZIP'.

Hi!

I have a _big_ problem with the communication on my Falcon. I can't
use my modem on 2400 baud with it. I can't find out what cause this
problem; I tried several communication programs, disabled HD (wit alt
on startup).
The strange thing is that it works on my ST and walso if I use
V42(bis) or MNP5. Unfortunately not all BBS' use those protocols...

If I _do_ use my modem on 2400 baud I get randomly strange signs.
Is there someone who has the same problem and could tell me how I can
solve it?
I have an Falcon with TOS 4.4 4/65Mb and screenblaster

Thanks,

Frits.

4139. ACSI trouble

Newsgroup: comp.sys.atari.st
Date: 1994-09-23 19:34:57 UTC
From: larserik@oslonett.no
Message-ID: <35val1$ars@hasle.oslonett.no>
Source record: 180229

I've hooked up an ICD Link host adapter with a SCSI streamer to my
MEGA STE, but can't get connected to it....

If I disconnect the internal MEGA STE harddisk the streamer appears at
ACSI ID 0. If I disconnect the ICD Link (with the streamer) the
internal harddisk appears as ACSI ID 0. BUT if both are connected
none of them work and ID-TEST only returns garbage as SCSI id-string.

To me it looks like both devices works on ACSI ID 0.
How do I get passed this problem (the ICD Link adapter is a closed
box with no DIPs or setting, and no special software). Is there
a strap inside the MEGA STE to set the first adress of the external
ACSI, or do I have to change the internal harddisk to ACSI ID 1
(the internal host adapter has adress select) - and if I do - will
the internal harddisk still be bootable (with the ICD disconnect too)

I hope Towers II is easier than Towers I! I have this, and find that
I get lost too easy in the mazes, and never find any good stuff.
I like it, and hope that a 'II' would only improve: better movement
routines (original was so blocky), and hopefully a map option.

Will Towers I users be able to upgrade for cheaper? :)

From: jpb3@ukc.ac.uk
Message-ID: <9861@falcon.ukc.ac.uk>
Source record: 180232

I'm posting this message just to ask if anyone at all knows when/if Papryus will get colour support. At the moment if is mono-only, and I can't bring myself either to use a mono-emulator, or to fork out loads of money on another monitor.

Also, does anyone know whether the latest edition of Speedo GDOS works any better/worse with Timeworks 2, and if it would be viable therefore to use Timeworks 2, and SpeedoGDOS alongside each other. The ability for the new SpeedoGDOS to use Postscript Type 1, and TrueType fonts has DEFINITELY caught my attention...

Thanks for any help I may get..

B> that).

Hi, there is another program called BARREL, does the same kind of thing i
believe as ICCA, worth a shot though!

Hi, i have looked for the same thing, the only ATARI computer that has voice
mail software/Hardware available is the Falcon, due to the Direct to disk
recording possibilities of it.

Hi i also have a GTS floppy drive that gave me the same problems, i too switched cables, but ended up replacing the 720k drive mechanismn with a 1.44 mitsumi, which will recognise 720k , it was the only drive that would replace the original one inside and work properly, The 1.44 part of the mitsumi drive does not work!

4147. comp.sys.atari.programmer (testing)

Newsgroup: comp.sys.atari.st
Date: 1994-09-23 21:25:27 UTC
From: ysiu@lexicor.com
Message-ID: <CwLq6F.4zD@world.std.com>
Source record: 180233

Hi everyone, I know people have been interested in possibly making this new newsgroup, so I went ahead an chartered a proposal. However this is only the first draft, and unless there are any great objections I will go ahead and submit this end of next week.

Cheers

Yat

Proposal for a new newsgroup
Request for Discussion: comp.sys.atari.programmer

by: Yat Siu (Lexicor@world.std.com)

Group name: comp.sys.atari.programmer
Status: unmoderated (ysiu@lexicor.com)
Distribution: world-wide
Summary: a newsgroup for the discussion of programming on the atari TOS or 8bit computer and any clones or otherwise

Justification:

There are currently several comp.sys.atari.* newsgroups, however none cover the aspect of programming questions. Atari Computer systems (8bit, 16 or 32bit and clones) have various development tools from other third party developers, some of which are very good. Atari Users require a forum where they can ask questions about programming in any language.

This new newsgroup is also meant to encourage programming on the atari and asking questions regarding programming. Very often programming questions are asked in other forums, but they either don't get a reply or ignored because it is not related to the topic. Atari Computers have got a user base of programmers who need to support each other on the usenet on a more global scale, and it should also help third party developers for atari development tools read and see what programmers use/require/want.

Charter:

The proposed group will provide a forum for the discussion of programming queries, discussions of techniques or anything else that is related to programming on the atari for any language that exist on the atari (scheme, gcc, c, basic, pascal, assembler etc.)

NOTE

This RFD is being issued in concordance with the guidelines set in the "How to create a new usenet newsgroup" FAQ regularly posted to news.announce.newgroups. Please refer to this article if you have any questions about the newsgroup creation.

Unless the discussion indicated a need to resubmit a new RFD, the CFV will be posted approximately three to four weeks after the posting of this RFD.

This RFD was (cross)-posted to the following groups: news.announce.newgroups, news.groups, comp.sys.atari.st, comp.sys.atari.8bit, comp.sys.atari.announce and mailed to the gem-list and lexicor-list

4150. Wanted: Spectrum 512 Paint Program

Newsgroup: comp.sys.atari.st
Date: 1994-09-24 01:06:37 UTC
From: jws4p@Virginia.EDU
Message-ID: <CwM0F2.GuK@Virginia.EDU>
Source record: 180255

I have been searching all over without any luck for the old
paint program from Antic, Spectrum 512, which used special
hacks to display all available 512 colors at once in low rez,
48 per scan line max if memory serves correct. I have a
520STfm with 1 meg and TOS 1.0. If anyone has Spectrum or a
similar program that would run on a basic system such as mine
I'd really appreciate hearing about it. You can post a reply
here or email me at jws4p@virginia.edu . Thanks!
-John Stanmeyer

4156. Re: The Best ATARI BBS software ????

Newsgroup: comp.sys.atari.st
Date: 1994-09-24 13:54:48 UTC
From: bensmith@teleport.com
Message-ID: <361b38$39c@linda.teleport.com>
Source record: 180252

I used to be a BBS SysOp. I ran Benjamin's BBS. I plan on running the BBS again once I can get my new MoDeM, Hard Drive and get my 520ST upgraded to 4 Megs and Rainbow TOS (1.4). I was Beta Testing some BBS ShareWare called UBBS, which stands for U.ltimate B.ulletin B.oard S.oftware. This software was written by Brian G. Hauer and Brian had help from others including Aaron Hopkins, Author of FreeZe Dried Terminal. UBBS Does Color VT-52, Color ANSI, ASCII and UBBS-Term Graphics. UBBS is written in GFA Basic. I was am a registered SysOp and I was one of the few Beta Testers who supported Brian with both feedback on needed information on the Beta Testing process and financial support. I found that because of my support, I had a say on future upgrades and features. By the time my bbs Hard Drive ultimately failed, the BBS went from running as a Basic file from within GFA Basic to version 2.0 where it was Compiled (finally), had a lot of new advances and renamed ForeSight. (The reason the old version wan't compiled was it wouldn't work until a newer version of GFA and Compiler came out.). The features are fantastic and if you have a Term Program which supports UBBS-Term, such as FreeZe Dried Term, you'll see some of the fantastic Menus supported by the BBS. Plus along with a support for ?!?some?!? software like some kind of ST Quick Reader which I think is IBM Compatible. It is netted with other ForeSight BBS's and planned expansion into other BBS's netting types. Great Full Screen Editor supporting ANSI, VT-52 and UBBS-Term (FSE written by Aaron Hopkins). Very nice on both the SysOp's end and callers end. If you want to see the BBS in action, call The Travelling BBS at (310)543-5483 8N1, support for ASCII, VT-52, ANSI and UBBS-Term. Both Color and B&W for most emulations. If you have UBBS-Term, use it. ITS GREATTT!! If you wan't to try using the Full Screen Editor, leave a message for Bravo Sierra, that's my handle. If your replying to a message, try the quoting feature. It's very good when debating in public. You can pull text from the person's message your replying to, trim the information irellevant to your argument and because its a full screen editor, if you make a mistake in the letter, you can jump around, with your arrow keys and edit the message. I think theirs even Cut and paste. It's like using an online word processor. And to get online help, hold down the Control Key and the the H key. To use the full screen editor, you must go to Configuration or Settings Menu.

Do not be fooled, even though the author of this BBS software is a friend and associate of Aaron Hopkins (Aaron's follow up support of FreeZe Dried Terminal is, to put it mildly, poor.) he is responsible and continues to proceed in advancing UBBS plus gives great support to his registered SysOps. He is currently in college but still keeps his BBS up 24Hrs and is home on weekends to reply to those who wrote him on the BBS and continue working on the BBS. Also, on College vacations he works on new projects for the BBS software.

---TTYL---
--Thanks--

Fonts which cause SL to return the error dialog about "contains data not
in .CFN format" can be fixed like that - by loading and saving into a
CFN editor - Genus, Didot and FaST Club's Fonty all seem to fix it. It
won't, AFAIK (it didn't work for me, at least) cure fonts which report
"not serialised for this copy of Calamus".

4160. Know a good comms prog ?

Newsgroup: comp.sys.atari.st
Date: 1994-09-24 15:55:22 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <09241994.155522@empyr.dircon.co.uk>
Source record: 180256

Hi All,

Can anyone give me some advice please ? I'm having shedloads of trouble with my comms software.

I have a 520STFM with 1Mb RAM, no HD, TOS 1.02 (yuk!) and a hi-res screen.

I'm using TeddyTerm v2.12 with XYZ.TTP v2.01 Beta as the protocol handler. The way it's set up now is that I have QuickST v3 run first in the Auto folder, then a RTS/CTS fix (HSFIX), then MACCEL (Mouse Accelerator), then NO CLICK (for the keyboard), Eternal Ramdisk (270k) into which I RAMLOAD Desktop.inf and xyz.ttp. I run TeddyTerm from the floppy. All this takes a fair while, and I don't really want all the frills that TTerm offers (and correspondingly takes all that time to load). I only use comms mostly for e-mail, and log onto a local BBS and use a QWK mail reader (MT-QWK). My mail packets are rarely over 50k.

I would like to have a setup that would possibly run from the ramdisk, or at least be QUICK to load !!, I need RELIABLE Z-modem transfers that don't need to access the floppy, and a script file would be nice to handle the logon sequence. Call costing would be a bonus, but it's not essential at all.

Can anyone suggest something ? I have tried Storm v1, but it freaks at port speeds over 2400, Freeze Dried Terminal is a bit big and insists on doing batch transfers, when I only want one file, apart from that, it's a bit unfriendly and too complex for what I want. I just want something SMALL, QUICK, BASIC (within limits !), and RELIABLE.

Whatever, I really can't use XYZ.TTP, as although it downloads fine, it gives me no end of grief when uploading. It starts racing ahead with the throughput figures, quoting me things like 6000 + cps for a 9600 baud modem, with a zipped file !, then it says 'Repositioning to offset 1024' and locks the whole thing up, forcing me to drop the carrier to get out !

It did it with the earlier version of XYZ too. It's driving me (and I presume my sysop) MAD !!!

PLEASE ! can someone out there help, before I finally crack and buy a PC ??

Source record: 180258

Hi again,

Do you remember things like 'Driller' and 'Purple Saturn Day', and all the other great games that were out in the 80's ?

How many of you have old games sitting around gathering dust ?

I'm not sure if this is the correct echo to post this in, but I can only get comp.sys.atari and comp.sys.atari.tech and I thought this was the better of the two for this subject !

I was just wondering if it could be possible to set up a list of second-hand games / proper software to exchange or buy.

Just an idea.

AFAIK what you're after is called UUCP; look for Hermes UUCP on your
favourite Atari FTP site (well, try atari.archive at least; it's also
available on a German site, but I don't recall the address)...

Hermes is probably your best choice, although it has some nasty (IMHO)
problems, like a uucico (the main transfer engine for UUCP) written in
GFA-BASIC, which makes it a challenge to run it under MiNT. It's a
pity, since UUCP traffic really demands a minix filesystem under MiNT;
it'd be so much faster and easier on the drive.

Now, if I bug nox enough, he might post his Taylor, c-news, trn, elm,
etc system binaries somewhere. He keeps making me jealous by posting to
the MiNT mailing list about how fast it is! :-)

Source record: 180261

Try TAZ V1.00 from the merit software archives. It is a recent program (1994) that will run on any stock ST (I have a 1meg 520STfm, no harddrive). The program loads quickly from a floppy; it is less than 100k. The program requires 300K free to run, the extra memory for buffers and overhead. So on a 1 meg ST you can create a 600K ramdisk (assuming no desk accs) and put in it the TAZ files, plus an editor and a command line interpreter (TAZ can jump directly to them without disconnecting the modem or haveing to reload the program itself), and still have 400K or so for archive utilities andf download space.
The main advantage of TAZ is that it does not use GEM, so it is extremely fast. On my 14.4k Hayes Accura, screens are redrawn virtually instantaneously. TAZ also has a built in IBM character set for ANSI, although you wouldn't be able to display ANSI colors on a monochrome monitor.
TAZ has built in X-Modem, X-Modem CRC, X-Modem 1K, Y-Modem, and ASCII protocols. For Z-Modem you can specify an external protocol such as XYZ.TTP or KERMIT.TTP.
The one drawback is that TAZ does not support built in VT-100 emulation as of yet, although the authors say in the docs that they are working on it. TAZ does support TTY, ANSI, and VT-52, though, and most internet servers offer VT-52, so this is not that big a problem, at least for me.
I bought FLASH II from Toad computers a few weeks ago and don't use it at all because I like TAZ so much more. Hurray for shareware.

Are you sure that the comm program you are using works ok on the Falcon?
The Falcon uses different hardware than the ST/TT series and if the your
comm program can't handle that new hardware, you won't be able to
communicate with the modem.

Have you worked out how to turn off the screen output on the PC slave program,
the docs mention it but they don't say how?

I am thinking that turning it off might speed it up a bit.

The executables I have are v1.02beta are there any newer?

Have you tried ANSITerm 1.9 - its a small program, offers great ANSI, and has been trouble free for me through three systems (520ST, STE, Mega) it the term I always use for calling - just about 99% of the time...

It does use XYZ however, but it sounds like the problems you are getting have to do with flow control, you need some sort of auto program to lock your comms port to 9600 - theres quite a few available...

Hmm, can't the Falcon do serial DMA (like the TT can, although I never saw anyone using it...) With DMA you should be able to get those fast rates. On the TT it was meant to be used for the LAN port if I recall correctly.

From: Nesral@closer.brisnet.org.au
Message-ID: <82c_9409260542@softtech.brisnet.org.au>
Source record: 180300

Hi Lars, well the MSTe peoblems surface again. Most people on the net disagree with me but i will state it again. I have been told by my supplier in Western Australia that the HD controller in the MSTe in not fully SCSI compatiable. My experience with this problem leads me to believe that the internal controller interfers with any ICD controller the reasult of this being the loss of the last partician on the ICD controlled HD. So i presume that when you only have one partician on the HD the MSTe will not see it at all. So you have proved my theory, in that your streamer is seen as the first and only partician and thus cannot been seen at all. I have a switch on the MSTe to switch of the internal HD. This helps as some older ST floppy based programs will not tolerate a HD in the loop. I rearly do not know what you can do about this problem. The only thing I can suggest is that someone mentioned an Atari SCSI controller, I was not aware that Atari made a SCSI controller, but as i said someone mentioned it a couple of days ago. I presume that an Atari controller would work on the MSTe.

To those of you who wish to tell me that all i have said is rubbish rember that all i have said is concluded from physical experimentation not from the theory so if you wish to critise me do so from physical experiments on a MEGA STe otherwise don not expect an answer.

Also if the guy who mentioned the Atari SCSI controller reads this please pass to me and Lars what info you have on it and were to get it as i need one too.

I hope this was of some help Lars.

Source record: 180278

I need a program that will take sectors from a Hard-Drive and convert
them into a file.

e.g. Sector 6657 to 9426. The program gets them, and everything in-
between, and writes it as a file to another partition.

I need this to recover a large quantity of files, all text, some important,
some not from a corrupted partition. The files are intact, but in the
de-fragmenting process, some of the directories got munged, and restoring
the fat/directory tables didn't help.

Knife-ST, DIsk-Doctor, DL-II, Salvage all are no use. Ed-Hack might help,
but until it arrives in the mail I can't use it.

Is there such a program? The PD-utility Salvage does what I want... almost,
as it will only read/write to floppies, and I can't simply change the
A: to E: in the binary, as it uses some sort of call to access the drive,
rather than a standard-access routine....

I would write one myself, but I'd rather leave it to the professionals,
as nothing works right 1st time, and so would probably make things worse!

The resulting file is approx' 2.8Meg (Which I can split & edit easilly
enough), so it'd have to be able to cope with that!

All it needs to do is read the sector (Start & end specified), and then
append it to the specified file. Similar to what Knife-ST's
"Build" function does. But as that only does things manually, and
sector-by-sector, it would take a good week to rebuild the files....

Any such beast?

4179. HELP! Looking for Atari modem software

Hello all,
I am posting on behalf of a friend of mine who has an Atari ST (fm) but who
has no Usenet access. He has been unable to obtain any modem/terminal software
that would allow him to use a modem with his ST.
I would appreciate any help anyone can offer in finding either a piece of
shareware etc. that would allow a modem to be used with his ST as well as any
information about how I would go about transferring/unpacking etc. software
from the net (either FTP or from binaries on Usenet) to an Atari disk, as
I have little knowledge of any of the intricacies of the Atari file system.
As I do not often read this group, replies by email would be appreciated.
Thanks very much for any help anyone can offer...
Philip.

Message-ID: <1994Sep25.115435.16076@blaze.trentu.ca>
Source record: 180275

I got a box-o-software with a second-hand Atari 1040STe. One of the disks had a program that appeared to be a GEM-based version of Kermit. Unfortunately the disk was corrupted (data on disk may be damaged) and wouldn't load, run, copy, etc. And here I had visions of getting on the Net with my Atari at last, as my server runs Kermit. Does anyone know where I could get this program? Does it talk to IBM mainframes (as what was left of the README seemed to indicate?) Please reply here or e-mail me. Thanks.

> the drive even if I change the disk and press ESC.

You say "often", which suggests that a quick "fix" can be to insert the changed disk as write-protected first, do an <esc> dir update, then remove and reinsert it as writable. This will usually work with drives that for one reason or another don't respond normally.

The possible reasons for the problem are:

1. The way the OS determines media change is not fool-proof, and may for writable disks return a changed/maybe-changed/not-changed value.
2. The diskettes may have the same serial number (or be MS-DOS formatted).
3. Reinserting a diskette which has been modified on another system can easily confuse the system.
4. Early TOS could be confused by switching A to logical B and back on a single drive. This occurred fairly often on a single SS-FD 520 system with the venerable First Word Plus where disk swaps were the rule.
5. Some machines have had defect drives which made media-change detection even more erratic. (I ran across this myself with an early Mega ST trying to install Timeworks once. There was no way I could get the installation program to realize that disk 2 had in fact been inserted. The drive was later replaced.)
6. Some cache programs also cache the FD, which can make the problem worse.

A nice fix today is the new Geneva and NeoDesk 4 which allow one to really *force* media update. In NeoDesk 4 with Shift-<esc>. I can see this clearly with an external FD I sometimes use as B; <esc> will not update a swapped writable disk correctly, but Shift-<esc> always will.

: If you do buy a PC to do direct-to-disk recording, spend the extra $50
: or whatever and get SCSI instead of IDE hard drives. IDE has never
: heard of DMA (direct-memory-access), which means the poor CPU has to
: push all those bits across the wimpy 8Mhz ISA bus. Get a local-bus or
: PCI SCSI system... it'll cost more, but you'll need it for high-quality
: work.

A friend of mine is writing a driver for me for the Buslogic PCI
SCSI-2 card (for BSDI/386). The other day, with a primitive driver
(not even close to being optimized) he was getting 4-5mb/sec transfers.
This was on a Pentium-90 machine using a Seagate Barracuda ST12550N drive.

I would think that anything above 2-3mb/sec would be good for
direct to disk, no?

Regards,

Chris

4191. Re: Falcon HD access errors

Newsgroup: comp.sys.atari.st
Date: 1994-09-25 16:04:08 UTC
From: Spencer.Davies@mettav.exnet.com
Message-ID: <780546474.0@mettav.exnet>
Source record: 180151

On 20 Sep 94 at 07:34:46, "Ofir did truly state.....

"G> I get the same problems with Screenblaster. I think this is a
"G> limitation of the Falcon and I am very interested in finding a
"G> solution. I find that the worst error rate is when using DA's Picture
"G> and saving large TIFs (5MB) in 256 or true colour.
I used to get problems like this in Truecolour and 256 colour modes until I returned my Falcon to System Solutions. They fitted a new Falcon Wing board and "re-did" the stability mod and now I haven't had any errors since (touch wood).

It may pay to have a word with Tony at System Solutions Windsor branch as he performed the above tasks on my Falcon.

> pay a registering fee. I will soon register to get the colour version...

Doesn't Griff's MPEG player use the DSP? Reasonable frame rates can be
had with the DSP in the Falcon.

> btw: I think that ST-guide plays mpeg files, although slow. I think it will
> run in any resolution...

AFAIK, ST-Guide will display IMG files, and that's about it. I think an
online help system on the Atari platform that could play movies would be
overkill; it's not like there's any way to use an Atari to create an
MPEG, unless you're going to render some sort of animation and use it to
build the movie, frame-by-frame.

Jim,
There are quite a few commercial and PD communication programs
about. If you can FTP a file and get it on an Atari disk then
FTP to any Atari site (try ftp.funet.fi for example) and go
into a communications directory. I recommend Uniterm but there
are also many others: Teddyterm, Freed Dried Terminal, Connect....
Good luck. If you cannot FTP these files then please let me know
and I'll find you the address of a PD distributor.

If you (like me) would like to avoid the nasty installing procedure of
Hermes, try using UPoint, a plug'n'play software for the ST. I use it for
half a year now and it features everything I demand.

Has anyone heard of David Small working on an Atari emulator for the Macintosh? I would love to see that. I have a Macintosh now (soon to be Power Mac) and I'd like to run my old Atari software.

Also, just out of curiosity, is Dave working on anything for the Falcon to provide colour emulation of the Mac?

>on another monitor.

First to make things clear: this refers to ST medium 640*200 resolution
Of course Papyrus runs in any colour resolution with at least
640*400 pixels. Actually it does run in 640*200 after a warning,
but due to GEM's way of fixing resources won't look good.

For a version appearing end of this year we plan to support 3D effects
in dialogs on TOS versions that allow it and using system fonts of different
sizes in MultiTOS. A possible side-product of this could be that it works
right in 640*200, but I can't promise that. Sorry, but there aren't that
many people that do word processing in this resolution, and designing dialogs
for medium resolution too restricts all dialog objects to character positions,
which is quite a severe restriction. But maybe I'll find a trick.

For Papyrus we currently have a built-in Epson Stylus driver in
beta testing that will be released in about two weeks. This
will also be available from Paradox. Speedo 5 and NVDI 3 also come
with Stylus GDOS drivers (Papyrus can use GDOS drivers
since version 3.13).

If you want FAST full VT-100 support with full color and an IBM character set, why don't you use ANSITerm?

Nothing is quite as fast and it's ANSI emulation is superior to any other terminal program I've encountered.

You can get version 1.90 from umich.

warwick@cs.uq.oz.au (Warwick Allison) writes:

>Atari decided that the TT030 is not fast enough to run X.
>They were correct.

They were completely wrong. The TT is quite capable of running X just fine.
(There is at least one commercial port that achieves quite respectable
benchmarks)

>The Sun 3/50 was a total dog under X. We would use SunView (aka GumbyView,
>SunSpew, etc) instead. And that was running BSD, not SVR4/5 which is
>even slower (Atari's was SVR4 based).

Comparing a TT to a 3/50 is a bit of a joke : the 3/50 is a 10 or 12 MHz
'020, hardly a valid comparison. You'd be closer with a 3/80, which
was often compared favourably with an SS1, or one of the VME '030 systems
like a 3/3xx or 3/4xx.

OBTW if you want to run X on a 3/50, have a look at Xkernel, and
bear in mind that X was originally written _for_ those machines.

>The best hope for Unix on Ataris is the Linux 680x0.

Which is a pity, as Linux isn't much of a Unix, but it seems to attract
the d00dz in the hacking community, and at that age they have the time
to spare. Hopefully there'll be enough followon from that and the
various NetBSD/030 ports so that a port to the TT will be relatively
straightforward, but I'm not holding my breath _just_ yet.

To which Dave Thorson replies...

Try GEM Spool (GSPOOL.LZH where I last saw it). This is a general
purpose print spooler that captures -ALL- output to disk and then
shuffles it off to a printer in the background. Lets you have several
files in the print queue; you can change their sequence, hold them, etc.
I was able to set it to hold all printouts until I told it to send them
(it's a DA you can get to any time). It's easy then to print to, for
example, an HP Laserjet (which I don't have), hold the print file, copy
it to a floppy, and print it at work later. Very handy for this and
works well as a print spooler as well -- doesn't take as much memory as
some spoolers and gives you the full capacity of your hard drive as a
printer buffer....

Since this offer is only interesting for people living in the Netherlands, I will proceed in Dutch.

TE KOOP:

Atari Mega STe
4 Mb RAM
Monochroom monitor
250 Mb harddisk Maxtor SCSI intern (nog geen half jaar oud)
1.44 Mb FDD extern (idem)
Replay 16 bits sampling cartridge met software
AT-once 386 SX emulator intern (draait Windows in enhanced mode).

Een aantal Atari boeken (waaronder Profibuch) plus een aantal programma's (waaronder Warp 9).

Ik zal op elk serieus bod (via e-mail s.v.p.!) reageren,

Richard.

>that respect), and does it offer pre-emptive multitasking?
>

Not, it isn't completely compatible with MultiTOS. That is, the MTOS modes of Pexec() work, as does some other stuff, but most MTOS improvements are not supported. This is a great shame, as MTOS is a rich environment although unfortunately slow (primarily due to the AES being dreadful and some problems with disk I/O). The MagiC AES has *some* features of AES 4.0, but not all.

It does do pre-emptive multitasking however. The claims of 'faster than TOS' are only true for single applications running in 'single-mode' (whatever that means), and not for the general case. Typically there is 1 or 2% slowdown, according to most benchmarks I've seen.

The MagiC authors (== the NVDI authors) are apparently trying to graft on a lot of the MTOS features, but it is not known when that version will be available.

: 1 - Is this the only COBOL compiler available for the ST Range?

As far as I know. If you were desperate then you could probably get
a LEX and possibly a YACC source to parse it, but I don't think
that there are any other compilers.

: 2 - Has anyone actually used Nevada under the emulator? Is it any
: good - what's the compilation speed like, etc.

I haven't used it for ages. I used it for a while and then swapped
to a PC COBOL under PC Emulation. A much better bet.

The Nevada cobol is really old and fairly limited. But it really
depends how advanced your COBOL is going to be. There are PD and
shareware COBOL implementations for the PC so if you have a PC\
emulator I would recomend them before shelling out for Nevada.

But if you don't have a PC emulator then Nevada is your only option
and it will allows you to get to grips with the language. But
prepare yourself for a trip to the past.

It isn't really very slow though. But I never really pushed it hard.

How much do HiSoft sell it for these days?

I don't think they supply the emulator with it either!

1. Fix your Caps Lock key.

2. Which version of POV? The first issue of 2.0 contained a bug which
caused bus errors; a patch was supplied with the POV that I have.
v2.2 is the current version, I believe.

Eric March (diehl@io.org) wrote:
: Was there ever an English version of this game made? If so, where
: could I find it? And if not, is there anyone who'd be willing to translate
: it? I could fairly easily extract the text portions of it and E-Mail them
: to any kind soul who'd be willing to do a bit of translating ... I'm dying
: to give this game a go, since it looks like a souped-up version of the
: original Archon, but still looks bloody great, but in its present form,
: sadly, I can't, not knowing a word of German beyond Fahrvergnugen. :-)

I will try to answer some of your questions:
I have talked to Graeme Rutt, which is one of those people who translate
german software to english. I have send him the complete version including
the editor for the questions. Maybe, there will once be a english version
of Topas (with "s"! ;-), but it is a LOT of work to translate all of the
3000 questions...
If it will ever be released, the english version will be Shareware. You
may find it on ftp.uni-kl.de or atari.archive.umich.edu.

You can also play the game WITHOUT QUESTIONS. There is a dialog at the
beginning of the game. On the right, there are some buttons. Klick on the
Button named "Fragen" (engl. "questions") to deselect it. You now can play
the game without any questions coming up!

Ciao, Heiko.

4219. Falcon sound to Hi-Fi???

Newsgroup: comp.sys.atari.st
Date: 1994-09-26 12:59:54 UTC
From: pd@mole.bio.cam.ac.uk
Message-ID: <366gka$gqu@lyra.csx.cam.ac.uk>
Source record: 180165

I have just bought a multisync monitor. The only problem is that it has
no speaker.
Is it possible to put the sound through my stereo?
Do I just need two cables connecting the corresponding microphone and
headphones sockets together. (I realise this is far too easy to work :))

If not, how can I do it?
The stereo has headphone and microphone sockets (same as the falcon) and
I think a CD-in socket (or maybe CD out?). I'll have to check this.

While I am at it, I might take the machine apart and disconnect the
internal speaker which does nothing except really annoy me. Especially
when it decides to turn itself on at full blast when playing some games...

Thanks for any help,
Phil

From: davidli@dragon.labmed.umn.edu
Message-ID: <CwqyFG.7BM@news.cis.umn.edu>
Source record: 180171

I am selling my 1040 STe (with 4 megabytes of memory installed) and color monitor. I'm asking $400, shipping included. If interested, send e-mail to:

davidli@simvax.labmed.umn.edu

I also have the latest edition of the Atari Compendium for $40 postpaid.

Also, a slew of ST Format/ST Review/ST User/STart/ST Log magazines, with disks, for $100, including shipping (shipping will be high, I figure, since the darned things weigh so much. If you pick 'em up, I'll knock off $25). The UK magazines include issues with programs like Easy Draw 2, Prospero C, Timeworks Publisher v1, etc.

I am looking for a terminal program that will let me run up to 56 kpb
kbps on my 1040STf. So far I'm stuck at 19.2. Is this a hardware
limitation, or just a matter of finding the the right software.

Thanks,
Lee (sig under construction)

4227. GEMRAM and WINX

Newsgroup: comp.sys.atari.st
Date: 1994-09-26 17:44:49 UTC
From: hwl0978@gemini.tntech.edu
Message-ID: <1994Sep26.114450.3280@atlas.tntech.edu>
Source record: 180195

I cannot seem to get GEMRAM and WINX to work for the life of me. I just got the latest versions 1.6 and 2.2 respectively, and still am having the same trouble.

I have a 1040STf with US TOS 1.00 ROMS (GEM 1.20 according to WINX.CPX).

Accroding to the documentation for WINX, it can run under TOS 1.0x (in a much more limited mode) WITHOUT GEMRAM. When I try this, I see the Winx info (version, date, and author) followed by "TKR: 0 bytes resident" (or something to that effect) and then 2 bombs. The machine continues booting after this.

When I try it with GEMRAM, I get the GEMRAM info (version, date, and author) followed by "Error: GEM DATA Address" followed by the same "TKR: 0 bytes..." message that WINX gives me. Since GEMRAM doesn't load, WINX reacts the same as it did without GEMRAM in the first place.

I thought that it might be something about the cookie jar since TOS 1.00 doesn't have a cookie jar built-in (I have had AUTO programs tell me there was no cookie jar instead of installing one), so I put COOKIE.PRG in the AUTO folder before GEMRAM and WINX (which before were the ONLY programs in there). This made no difference whatsoever.

I also hope that they aren't expecting XBRA support (saw it mentioned in the docs) since TOS 1.04 was the first version with XBRA.

Any ideas? Has anyone gotten WINX to work with US TOS 1.00 with or without GEMRAM?

WINX seems like a really nice GEM enhancement, but I can't get it to work at all! <sob> <grin>

You can try 'lastclst' which is with Zorg.
Zorg can be ftped from ftp.cnam.fr:/pub/Atari/Disk/zorg_138.lzh (the official ftp site for Zorg).

I wrote lastclst to read files that occupies the last cluster of a partition.
The TOS 4.02 or AHDI 6.061 can't read it.
You specify the first sector and the size of the file. lastclst write it where you want.

>I need this to recover a large quantity of files, all text, some important,

: I hope Towers II is easier than Towers I! I have this, and find that
: I get lost too easy in the mazes, and never find any good stuff.
: I like it, and hope that a 'II' would only improve: better movement
: routines (original was so blocky), and hopefully a map option.

: Will Towers I users be able to upgrade for cheaper? :)

: --
: Billy D'Augustine azog@world.std.com

Towers II is a different game than Towers I. So we did not plan an upgrade. However, we will think about it. :)

As far as movement, Towers II is smooth scrolling, not step movement like Dungeon Master and Towers I.

There is an auto mapping feature in Towers II. (I knew I forgot to add something to the Press release) :)

We will be posting some TIFFs in the next couple of days. I'll post the FTP site here.

Vince

Yes, I know there is an english program _version_ (and a Swedish too)
but my question was about the _harcopy_ manual, a full printed version.
Very much of the real important stuff is not in the on-line manual:
about ISO-character-sets, emulation and other things.

Kevan, your serial port patch isn't working if this is happening. If I
remember rightly, someone said that XYZ has quite a bit of trouble with
certain RTS patches. I know when I used TeddyTerm XYZ seemed to kick the
RTS fix out of memory as soon as it ran. Try HSMODEM, which is the one I
finally got to behave itself with XYZ.TTP - you shoudl be able to pick
it up from your local BBS, or I would imagine a.a.u.e. have it if you
have ftp access.

4232. FOR SALE: printer, modem, atari st/color monitor, etc.

Newsgroup: comp.sys.atari.st
Date: 1994-09-26 20:42:39 UTC
From: guy@lisa.chem-eng.nwu.edu
Message-ID: <367bnv$jls@news.acns.nwu.edu>
Source record: 180181
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.other,chi.forsale,nwu.forsale

Offered for sale:

Atari 1040ST.....$120
1Mb, TOS in ROM
USA language disk with ST Basic
ST mouse, horizontal diode not working
cable to printer, homemade

Atari SC1224 rgb color monitor.....$30
not working, I think a blown high-voltage supply

Panasonic KX--P1901i 9-pin printer.....$70
half box white fan-fold paper
cable to atari, homemade

Zoom 2400 baud external modem.....$60
SmartCom software
still in 7 year warrenty period

Above in original boxes and with manuals.

2 HP 9122 3.25" dual disk drives.....$40
GPIB interface and two cables

Everything is offered "as is", cash and carry.
You pick up at Northwestern Univiversity.
Take everything for $240.
Accepting best offer.

In addition you can have as much (or as little) of the ST software I
have. There's 41 disks worth. Some samples are:

DC utilities v1 with manual: DC Squish v1, DC Xtract v1, DC Deskey v2,
DC SEA v1, DC Desk Organizer v1, DC RAMdisk v1

UniTerm 2.0c with manual, the best terminal emulator around, VT* and
Tektronix graphics emulation, Kermit, X/Ymodem transfer protocols

Gnome v2.2, an emacs-like editor with online manual

Lattice C v3.4 with manual

Absoft AC/Fortran v2.2 with manual

STart, the ST quarterly disk v2 no2 with magazine: strtcalc, a ti-35
calculator; grapher/3dgraph, 2-d and 3-d function plotters;
pixelpro, a pixel editor; stwriter, word processor with manual

Compute!'s disk v 2 no 6 with magazine: checker, a spell checker;
printer, a printer control desk accessory; sedit, sound
editor; samed, basketball sam and ed game

The rest is miscellaneous, perhaps only good for the blank disk value.

Hi,

I tried lynx now.
To my opinion it is working fine. The highlighting of the chosen item don't work (vt52) and you have to guess where you are, but I think it's very much better then none.

You can save a page, you can get it mailed to your address, you can download files and all that with only a keypress on the right button.

> I am well impressed !!!!

I've been impressed, too, but after about one year I got bored of the
FALCON and got a TT with TTM194. ;) I got my FALCON in December 1992,
its serial number was 173 ;)

> When the monitor is in VGA mode, all the graphics in games look very
> blocky compared to RGB mode. Is this supposed to happen and if so why?
> I thought it could run in a higher resolution and so make the pixels
> twice as big but that didn't make any sense to me.

I noticed the same. I think those monitors are just more sharp than
those pocket TVs sold as "monitors" (SCC1224).

> Another thing, when I had Blowup and NVDI installed I decided to try
> Multitos to see what difference it made to that. I *think* the order was
> NVDI, Blowup and then Multitos but I'm not sure. It started up OK, but

The order has to be NVDI, MINT, BLOWUP.

> when it tried to load the control panel accessory it threw a wobbly saying
> something about a memory violation. This was the last thing I expected

Hmm, I never got a memory violation using BlowUp. If you can reproduce
this, write a bug report to the authors. Remember: Screenblaster does
not work with memory protection at all. ;)

> not to work since it came straight from Atari :). It did work OK without
> Multitos. This doesn't really bother me too much as I never have the need
> to run Multitos anyway....

Sure, the FALCON is too busy shuffling your pixels to the video
hardware. That's the price of a high resolution...

> One other thing, in the Blowup manual it says it can't do very high TC
> resolutions as the video chip is asking for data faster than the RAM can
> deliver it. Would one of these 030/040 +TT RAM upgrades help this? I

They would help a bit, but not much more, since the bus speed stays
at outdated 16 MHz. ;(

> thought TT-RAM is supposed to be faster than ST RAM. Are Blowup and NVDI
> compatible with any/all of these boards?

Video RAM has to be in ST-RAM. There is no way to use TT-RAM for that.

I've seen this on PCs with switch boxes. The only cure is one of those suppressor 'cylinders' which are buit into the cable. I've been unable to source cables with these on (except already attached to monitors) or clip on ones.

Failing that, try and improve the sheiding on everything.

:-(

The MSTE should boot from the first SCSI ID. You want to keep the internel one as ID 0 as an externel Tape Drive is not going to be bootable.

There is nothing inside the MSTE (or the Link) AFAIK to change the SCSI ID. The place to change it is on the Tape *drive* unit inself. There should be some jumper pins. You will need to put a jumper on one. Quite where depends on the make and model of the tape drive you have.

You may also run into problems with terminating resistors, but I wouldn't worry about that until it happens.

:-)

I believe Wolfgang was in fact talking about the full blown TeX hardcopy manual. Regardless, there does exist an English manual (a very fine one, Philipp :-). As you point out, the manual allows one to use a lot of features that are not covered in the online help. The online help is enough to help you remember things from the manual though, so it is still quite useful.

BTW, since Wolfgang seems to be reading this thread, I suggest that he put a clickable entry in the help page for the dialing dialog which mentions some things about the modem settings buttons, particular the magic characters that make the dialing string work. I seem to remember that the default is not suitable for US use. The default I see in most US programs is ATDT (or in your notation, ATDT#|). The help page "Modem Reactions" would be the ideal place to put it, plus a way to get to that page from the dialing dialog help screen. Just a suggestion.

> someone post one on this newsgroup?

Creating Mods on a stock ST is a bit of a pain, as there is no stereo sound. STE machines are stereo, and there is a better selection of trackers (mod file creator) for them.

However, you probably should check out ProtrackerST. It comes with versions for ST, STE, and TT, and is quite nice. It is available via anonymous ftp from atari.archive.umich.edu in /Sound/Players. Do be sure to click the blank area at the upper right corner of the screen while in the disk menu dialog (there is a nifty little game there).

The best tracker I have seen for the STE is Octalyzer. It is available from the same place as above. Grab the 0index file for descriptions of these and other programs.

>
> Where can I get an Atari ST, external hard disk for a good price?

Well, an external Atari drive is basically just a stock SCSI drive with a special host adaptor card (the controller is built into a SCSI device). Thus, you can either buy one from an Atari dealer who builds such drives, or you can buy a stock Mac/PC external drive and use an external host adaptor. The prices on stock Mac/PC drives are very low, as there is much more volume. Also, the external host adaptors are actually cheaper than the internal ones (which is strange). Anyway, if you want a new device, I suggest you purchase a Computer Shopper magazine, look at the Megahaus and Dirt Cheap Drive ads (yes, that is really the name of the company), and buy yourself a standard external drive (you don't need Mac formatting software or anything). Then, purchase and ICD Link2 external host adaptor from an Atari dealer for $90 or so, and you will have what you want.

Also, it is a lot easier to find used Mac/PC units on the various forsale groups. There are some amazing deals on those groups.

For a source of dealers, I suggest you call Toad Computers (1-800-448-TOAD), and buy an issue of ST Informer and/or Current Notes magazine. This will give you several ads to choose from for ST mail order places. Do be sure to get a Toad catalog as well. Toad is one of the better mail order places for the ST in the US. D&P is another one, at 1-800-535-4290.

In any case, I suggest an ICD host adaptor. Their software is great, much nicer than Supra/Atari, IMHO.

> benchmarks)

I think you are confusing "running an X server" with "running UNIX and using
X as the GUI". For example, a 3/50 makes a dandy X-terminal via Xkernel, but
a horrible UNIX box (by today's standards). The difference is that Xkernel
only provides a X server - all other programs must be run elsewhere. Running
UNIX on a machine and then running X means that everything is running locally,
with all of the overhead added together. I believe these folks are saying
that a TT running SVR4 _and_ X was not usable. That is very believable.
X is a memory pig, for one thing. A proprietary (yet small and fast) GUI
similar to Sunview (but not too similar :-) might have been a lot better.

The commercial product you talk about above is probably an X server, not a
full-blown UNIX with X included. A TT is more than capable of being a
great X terminal, from a CPU horsepower point of view.

> Comparing a TT to a 3/50 is a bit of a joke : the 3/50 is a 10 or 12 MHz

> like a 3/3xx or 3/4xx.

A TT is a bit faster than a 3/80, I believe. Sun 3/80's are pretty awful
by today's standards as well, for a UNIX box. They make really nice
Xterminals, though. Again, totally different set of demands.

> Which is a pity, as Linux isn't much of a Unix, but it seems to attract

If LINUX for the Atari catches up with the PC LINUX (or even gets close),
it will be an impressive product, at least in terms of the software available.
Performance will probably be pretty bad though.

Just shut up! :-) Most of the time, yes. But I don't think Toad is a
regular abuser of that policy and Atari needs all the help it can get.
Removing their posting would hurt more than it would help.

The problem is that some companies did/do/will post massive volumes all
the time. They have biz.* for that. But I doubt too many people would
have even heard about the Toad ad if it had not been posted here.

Perhaps they should have posted a tiny reference to their information in
a biz.* group.

Is there a biz.* group for Atari? I can't seem to locate my Usenet
files.

Has anyone out there written a little program to add up minutes and seconds?

I enter running times like this: 2.35
Minutes _____^ ^_____ Seconds

The seconds add up in base 60, though. So a normal calculator becomes unhappy with it. What I could do with is a little custom program to add the minutes and seconds up with. Just a simple TOS job would be fine, no frills necessary.

Thanks for reading this, any help gratefully received.

Ok , all you computing Guru's out there, I would very much appreciate some
posts regarding someone who is need of a Multi Media Authoring Tool Software
for the Atari Falcon 030 that is capable of the following features:

GIFF and TIFF graphic file support
FLI animations & AVR, WAV sound files

This software must be able to produce a *STAND ALONE* interactive multimedia
package for use in creating kiosks and CD Rom packages.

This software would allow the creation of gadgets and overlay on top of TIFF
Pics and be able to access different layers, such as sound, videoclips and more
graphics or menus.

This software would preferably utilize a scripting language.

The software would operate on a 4 meg Falcon with hard drive.

Anyone knowing of such a package for the Atari or of one in development from
Germany or elswhere, we would be very glad to hear some information of it.

Thanks to all.

I recently bought a STe and swapped some of my 520's ram to it. I now
have a 1m 520ST with double sided external disk drive, all working fine;
This machine has a JRI board with extra sims which can be easily repopulated
to make a 4meg machine.
Also, I still have a stock 520 with two single sided disk drives and a mono
monitor.
both these machines are for sale, separately or together.
what I'm hoping to get is,
$175 - 1meg machine
$50 - ds drive
$75 - monitor
?? - stock 520 & single sided drives.
Anybody interested?
E-mail me, please. I don't feel good about cluttering up this newsline.

All I'm running is Chameloen, Neo Control Panel as ACC's, and the following
progs; autoclock, bombres, bootkill, dmirror, drvin, envoron, jar90, ledpanel,
letemfly, mfp, slectric, and tos14fx2. I take it none of these should cause
any problems?

>with my comms software.
>
>I have a 520STFM with 1Mb RAM, no HD, TOS 1.02 (yuk!) and a hi-res screen.

Okay, pretty similar to my setup as I have a 1040STFM with TOS 1.02
and a hi-res monitor. I now have a HD but only recently didn't, so my
recommendation is to use Uniterm. You need to use GSZRZ as the
external protocol though. XYZ just isn't worth the hassle. To get this
running well, you really need to grab the set of Macros for Uniterm
that Mickey Boyd has written. They make integrating GSZRZ into the
setup easy.

Hope this helps.

Cheers,
John

>"german-only"?

There's an English manual available for quite a long time. It's a complete
translation of the German original (and not only a English summary of the
functions)

Cheers,
Philipp

BTW, since Wolfgang seems to be reading this thread, I suggest that he put a clickable entry in the help page for the dialing dialog which mentions some things about the modem settings buttons, particular the magic characters that make the dialing string work. I seem to remember that the default is not suitable for US use. The default I see in most US programs is ATDT (or in your notation, ATDT#|). The help page "Modem Reactions" would be the ideal place to put it, plus a way to get to that page from the dialing dialog help screen. Just a suggestion.

Well the HELP key is always a good choice to get information on the currently active window. Certainly there is a big set of options to set in this dialogs and as far as they are related to Connect I think they are described in the manual as well as in the (HELP-key obtainable) online help. Modem specific things like your atdt#| cannot be covered there...

Wolfgang

: >

: Is this true ??

: Eric ??

Not Eric, only me:-)

It *is* illegal to disribute any version of MiNT later than 0.95
(or was it 0.93) in binary form!

This is very sad because it keeps many people from using
MiNT. (You have to instal the old version to compile the latest
source)

That is the reason why Atari decided that MiNT 1.11 may be
distributed in binary form once it is ready.

There is a 1.11 BETA around for some weeks and a BETA-2 announced.

If Eric or anyone from Atari will find this version or anything
between 0.95 and 1.11 BETA floating around there is a chance that there
will be *no* 1.11 final.

So please wait 'till it is time.

If you hi-fi has CD in then that is what you want, just take the falcon headphone to the CD in (or AUX) port of your hi-fi.

Otherwise you need to plug it into the mic of your hi-fi, but the levels will be wrong, so you'll have to be carefull not to blow anything!!

Tom.

>recording possibilities of it.

Hi,

Thanks to the help of a couple of people on this newsgroup I know now
for a fact that at least one software package supports voice-mail for the Atari
st. This package is called Coma,it's shareware and the latest version is 2.4.
It can be found on ftp.uni-kl.de in the pub/atari/incoming dir. You dont
actualy need a dsp chip as there is already one in your modem It does the
digitising, and spews the data down your modem port. The software then deals
with this data accordingly. As yet I have not actualy worked out how to use
Coma as it is a package with all german instructions, which I don't understand.
From what I have been able to work out though it most definitely does
voicemail. Wether it is compatible with the chipset in my modem, a Linelink
144e, I do not know.
If anybody knows wether there is an english translation type file
for Coma or the authors e-mail address, please let me know.

Many thanks,

putney@suburbia.apana.org.au

This is a hardware limitation. It can be improved upon via several hardware
modifications (57600 is pretty fast for an 8mHz processor, though), plus
a bit of special software that will allow you to use the higher speeds in
just about any program. Check out /Utilities/Tosfixes/RSVE_1.LZH and
/Telecomm/turbors.lzh via ftp from atari.archive.umich.edu.

> there...

When one hits HELP in the dialing dialog, there is no easy way to get to the "modem reactions" help page (it does mention the modem setting buttons, but it is not a clickable entry). This page is available in the full index of help pages, and IMHO it would be a good idea to make it available directly from the dialing dialog help page. So, I'm just suggesting the addition of a clickable "link" in that page, to something you already have.

As for the modem specific thing, atdt#| will work for a very large percentage of US users, and I believe the default will not. I was thinking along the lines of adding a single line like "US users: try atdt#| if dialing doesn't work". I do understand your desire to make the help pages as modem-independant as possible, though. The thing that took me awhile to figure out was the "#" and "|" characters.

Heck, I'm not complaining, because I now have the manual. However, I would think that you would want new US users to be able to try CoNnect out, and to do that they need to be able to dial phone numbers correctly. I have seen it mentioned a couple of times that "I couldn't get CoNnect to dial properly, so I gave up". I'd hate to think that folks are missing out on this great program because they cannot see it in action.

Since a little while I use STarCall. It's a very good German program.
It support TTY, VT52, VT100, VT200, VT220 and ANSI. You can select the
hardware your modem uses and lots of other things.
It's for all Atari ST,TT and Falcons, works with MultiTOS and is
very beautiful.

I don't know if you can ftp it somewhere; I can't, so I can't put it
somewhere...

> Is it possible to put the sound through my stereo?
> Do I just need two cables connecting the corresponding microphone and
> headphones sockets together. (I realise this is far too easy to work :))

It is highly unlikely that you can connect the headphones socket on the Falcon to the Mic socket on the hifi. The falcon's output is too high. Look for an AUX or TAPE input on the hifi and use that instead.

> The stereo has headphone and microphone sockets (same as the falcon) and
> I think a CD-in socket (or maybe CD out?). I'll have to check this.

Don't use the CD-in socket - you'll damage it!

> While I am at it, I might take the machine apart and disconnect the
> internal speaker which does nothing except really annoy me. Especially
> when it decides to turn itself on at full blast when playing some games...

Good plan - it unplugs easily.

First, I finally got my copy of Papyrus Gold 3.55 (English version) - and I can hardly tell how impressed I am..! It's superb - it's so good that EVERYBODY should get one immediately ;-) ! Well, I use it partly for DTP, and it does even _that_ very well... My comparison is Calamus SL, so not bad! Still, even the best might be improved: a couple of questions and suggestions:

- Papyrus doesn't work under Geneva. The horiz. ruler freezes the program when on; without it Papyrus works even with Geneva. Is the problem in Geneva or Papyrus - and will there be a solution..?

- Is there any way to delete a single word with a keyboard shortcut? The (english) manual, though is good, doesn't help much in this. The method it describes, actually deletes a whole line... ;-((CTRL-del)

- Can one create tab points automatically, e.g. you set one point and Papyrus creates the following tabs by a fixed distance (e.g. 5 spaces) ? That would be important for some of us.

- CVG support would be GREAT, and so would EPS support..!

- I personally would _very much_ appreciate support for Microsoft Word for Windows and Word Perfect 5/6, if possible at all... There are no Atari programs capable of importing these text formats directly; still, very many people use them daily. RTF is good, but... Any hope?

I hope Papyrus will succeed great, because with programs like these, Atari will definately survive. Why buy a PC or Mac when we have stuff like this..?

I think it also depends on whether the TT is to be used as an X server or
both a client and a server.

AFAIC its up to being both.

Another thing you could do is to replace the internal MSTE SCSI host adaptor with an ICD one.

My MSTE has an ICD MICROSCSI adaptor in it to drive the main HD. I can then add an external HD connected to an ICD ADDSCSI+ controller. This works fine. It even works if I have a CD-ROM as well as the second HD on the ADDSCSI+.

{sorry for the previous mistitled posting}

Hi:

Mys sister has a 1040ST with a dead mouse. Is there a good source of
inexpensive replacment mice for this machine, or can I get a standard
PC mouse and adapt it with a plug converter or cable?

Also I am curious if there a FAQ for this newsgroup available.

Thanks

Atari did make a special 68881 Coprocessor board for the Mega's, it was placed in the bus expansion slot. So there was (is) no special socket for a coprocessor on the Mega. I think the author got confused with the Mega STE series which do have a coprocessor socket.

Hmmm... I don't think it's worth going to all the trouble, to be honest
:>

> I haven't used it for ages. I used it for a while and then swapped
> to a PC COBOL under PC Emulation. A much better bet.

Yep, I agree, that's exactly what I'm about to do.

> The Nevada cobol is really old and fairly limited. But it really
> depends how advanced your COBOL is going to be. There are PD and
> shareware COBOL implementations for the PC so if you have a PC\
> emulator I would recomend them before shelling out for Nevada.

I've actually got an old floppy-based PC here, so I'm going to have to
knuckle down and use that. Th eother alternative is my old copy of
PC-Ditto... Yikes! :-)

> But if you don't have a PC emulator then Nevada is your only option
> and it will allows you to get to grips with the language. But
> prepare yourself for a trip to the past.

Exactly, which is why I wasn't keen on tangling with CP/M all over again
after so many years...

> How much do HiSoft sell it for these days?

Believe it or not, still at 49.95ukp! Astounding, but then they know
it's the only semi-ST based COBOL system.

> I don't think they supply the emulator with it either!

They do now, or so they told me last week when I rang them. Nope, I'm
leaving Nevada alone and using a freeware compiler on the little PC.
Cheers for the feedback!

4298. Cubase Audio sys requirements

Newsgroup: comp.sys.atari.st
Date: 1994-09-28 13:07:29 UTC
From: urbansky@bailey.com
Message-ID: <CwuCGH.HHu@bailey.com>
Source record: 180147

I currently have a Mega ST4 which I run Dr.T's Omega II, X-oR, Hitman and a few other MIDI things on. I plan on getting either a PowerMac or a Falcon to do hard disk recording of digital audio. I would most likely keep my Mega as the master sequencer so that I can still use the SMPTE (I have a Phantom) and also to reduce load on the PowerMac/Falcon.

What I would like to know is -- what are the system requirements for Cubase Audio Falcon? Exactly how many digital audio tracks will it do? I've heard everything from 4 to 16 and i'm not really sure which is right. How much RAM/hard disk does it need, and what type of hard disk can it record to -- IDE, SCSI, both? Is there _any_ difference in sound quality between recording on the IDE vs. the SCSI drive? Is there a difference with respect to number of tracks when using the IDE vs. the SCSI?

I've read about Cubase Audio Falcon and a problem it has when recording digital audio to hard disk partitions larger than 256MB -- has this been remedied? Am I going to have a "glitch" in my music if I record more than 256MB of digital audio while a switch is made to the next hard disk partition (this would be bad)?

And some other questions -- how is the sound quality of the Falcon with respect to digital audio? Will it sound as good as a high-end sampler like an Akai (16-bit)? This is the ONLY THING I would use the Falcon for hence it is the most important feature to me. If it doesn't stack up as far as sound quality, there is no reason for me to buy it.

What if I want to externally mix/process digital audio tracks recorded on the Falcon? Say I record 8 tracks, and I want to send 2 of them through my SGX 2000. How would I get these two tracks out of the Falcon without the rest? Do I need extra hardware for this? If so, will this extra hardware work with Cubase Audio Falcon?

John

4299. Atari and Sega bury the hatchet

Newsgroup: comp.sys.atari.st
Date: 1994-09-28 13:58:09 UTC
From: ritz@ritz.mordor.com
Message-ID: <CwuEsy.G42@ritz.mordor.com>
Source record: 180077

[reprinted without permission from Dow Jones News Service]

TOKYO -DJ- Sega Enterprises Ltd. and Atari Corp. (ATC) settled their disputes and formed an affiliation that includes several agreements designed to serve as the basis of future working arrangements between the companies.
In a press release, the companies said Sega will buy about 4.7 million Atari common shares for $40 million and will receive worldwide, non-exclusive rights with certain exceptions to Atari's library of patents, a number of which extend beyond the turn of the century.
The companies said the agreement covers Sega, its units, licensees and customers for more than 70 U.S. patents and applications, for a fully prepaid royalty to Atari covering the remaining 7 years of certain patents, amortized at about $7 million per year. Atari will therefore receive a total of $50 million, less contingent attorney fees and costs, the companies said.
Sega and Atari said they will enter into software license agreements for a specified number of games that would be made available on each company's current and future platforms.
The companies also said Atari will dismiss its legal proceedings against Sega, and each company will release all claims against the other. As reported last year, Atari filed a patent infringement suit against Sega.
The companies said the agreements are subject to approval by the U.S. Department of Justice and the Federal Trade Commission under Hart-Scott-Rodino and to certain other conditions.

4300. Re: SCSI Ethernet on Falcon

Newsgroup: comp.sys.atari.st
Date: 1994-09-28 14:19:46 UTC
From: dackerma@magnus.acs.ohio-state.edu
Message-ID: <36bu22$e36@charm.magnus.acs.ohio-state.edu>
Source record: 180068

I'm here just back from break. Ok.

Question: Does Tuw-TCP handle SCSI or parallel ethernet adaptors?

Answer: Not directly out of the box. But I'm fairly certain that you could get one to work. They included the source code to the packet drivers so that the user could recompile to have it work with their specific card. This I believe is the saving grace, I could be wrong but I believe that if you were to edit the NIC* pointers to which ever port you want to use you would be well on your way. You of course would need to know C and have a card to play around with...

I don't know how much more help I can be, as I don't have a ethernet card, anyone want to send me one ;) I have looked through the code and it is pretty straight forward. If you have anymore questions about it fire away, I'm sure one of us around here can figure it out.

As far as the german goes... "Deutsch ist nicht so schwer, als Mann kann deutsch."

>Could anybody tell me why sometimes when I use DspLoadProg, my falcon crash (I mean >it returns me -1), and sometimes it works well. If I use DspExecProg, my programme always work well. THANKS

The problem is most likely that you haven't done the Mshrink at the start of your program that is needed because DspLoadProg needs to Malloc some ram to do it's tricks. You should also check the DSP lock to see if some other program is using it.

Hope this helps

|> Papyrus - and will there be a solution..?

I think that this rather is a problem of Geneva. papyrus is known as
a very clean program, which runs both under MultiTOS and MagiC.

|> - Is there any way to delete a single word with a keyboard shortcut? The
|> (english) manual, though is good, doesn't help much in this. The method it
|> describes, actually deletes a whole line... ;-((CTRL-del)

Why don't you use the shortcuts to mark a character/word/sentence/paragraph
and press <CTRL-X> after that? In the german version, there are the following shortcuts:

ALT-C mark a character
ALT-W mark a word
ALT-S mark a sentence
ALT-A mark a paragraph
ALT-Y mark a page (<- I hope I'm not wrong here)

Except of ALT-Y, I frequently use them, and I'm quite satisfied with that.

|> - CVG support would be GREAT, and so would EPS support..!

There is at least an indirect way for CVGs: X-Act Draw.
If you should work frequently with vector graphics that
you need for DTP work with papyrus, this program is a
good buy.
It can import CVGs and save them as GEM-Metafiles which
can then be very easily imported into papyrus (GOLD only),
e.g. by marking every object, pressing <CTRL-C> to copy
the objects to the GEM clipboard, starting (or switching to)
papyrus and simply pressing <CTRL-V>. It couldn't be easier.

|> - I personally would _very much_ appreciate support for Microsoft Word for
|> Windows and Word Perfect 5/6, if possible at all... There are no Atari programs

|> capable of importing these text formats directly; still, very many people use
|> them daily. RTF is good, but... Any hope?

Well, isn't RTF already a good way to exchange files with Word?
What's wrong with it?

I have an old Atari 520ST 512K RAM that is broken. It boots and runs fine, you can even run mouse only software, but the keyboard does not work.

I don't really need it anymore and would be happy to give it away or part it out rather than toss it in the garbage. Due to my current work schedule I won't have time to ship anything for at least a month, so anybody willing to come get the stuff can have it for free. I live in Cupertino and work in Sunnyvale and will be happy to meet people in either spot.

Here's the list of stuff:

Hardware:
1 Atari 520ST 512K RAM (Broken keyboard)
1 Atari SM??? Monochrome Monitor
1 Atari Mouse
2 360K SS External Disk Drives
1 720K DS External Disk Drive (3rd party)
1 1200 baud VolksModem

Software:
LDW Power Spreadsheet
Metacomco Pascal Compiler (This is really old!)
Thunder Spellchecker

Games:
Breach
Sundog The Frozen Legacy
Temple of Apshai Trilogy
Simcity
Empire
Brattacus

There's a lot more games than I listed above, I just can't remember all the titles. Most of it is pretty old though. I think I have all the manuals still, but none of the original boxes.

If you're interested in any of this feel free to contact me at:
e-mail: mdm@esl.com
Work: (408)752-2890

4308. useful auto prgs/ACCs?

Newsgroup: comp.sys.atari.st
Date: 1994-09-28 18:00:11 UTC
From: hallvart@ifi.uio.no
Message-ID: <36cavb$9rj@baugi.ifi.uio.no>
Source record: 180073

I have an STE with TOS 2.06 and 2MB RAM. As I don't have a hard disk
I use about 1MByte for a RAM disk, and always start up with a startup
disk I've made.
On this disk I have various useful utilities, like in the auto folder:

-automouse (mousekamania)- let's you use custom mouse pointers, even
moving ones!
-Selectric alternative file selector, with copy/move/delete functions
etc. so you can do that within a program!

-HD_fdc changes the step rate for HD drives, but I need it for my 720K
drive since TOS 2.06 made it very noisy! This helps
-noclick removes the annoying keyclick!
-fuji shows a rotating "Fuji" (the Atari symbol) in the top left hand
corner, so you can see if the computer's "locked"/"frozen" or
not, and looks pretty cool too!
-silkmouse mouse accelerator and screen saver with lots of features

for ACC I have the following:
-Chameleon (2 of them!) for loading/unloading (most) accessories without having
to reboot the computer and installing new accessories all the time.
-Mdisk reset-survivable RAM disk
-N_capslock (I think that's the name) shows if the capslock is on or off by showing
a black or white box in the upper right corner (does anyone know if this
is available as a prg that can be put in the auto folder?
-mauswindow window-topper; you don't need to click on the new window to access it, just
moving the mouse to the window you want to use will highlight it!
(it would be nice to also have this one as an "auto" program)

on the disk I also have a nice text editor called
-7up, which is a program, and also
-Edith 1.0 which can be used as an accessory.
-DCxtract for decompressing files
-renameit for renaming files with "nonstandard" characters
-undelete, for undeleting accidentally deleted files
-UNIX2ST/ST2UNIX for converting end-of-line characters between the two
-Hcopy 1.6 for formatting (MSDOS) and copying disks

well, that's it- and I also use "Stzip" and "Lharc" for decompressing, although a
single 720K disk can't room them in addition to all of this.

So, are there any other useful programs out there that I could/should add? Forget
about the size limitation of the disk, I just want to know for future use, when I
get a hard disk.
Thanks.

Hallvard, Oslo, Norway

While you are booting from floppy

UVK

As long as you keep it backed up stretch it to 935k with 11x84 sectors and use say
PACK_ICE to squash the progs down.

(yeah 10x82 is faster and safer, but try squeezing Calligrapher + Thes or That'sWrite
with a useful set of fonts or Protext + Dictionary into less.)
Pack ICE runs a tad slowly if you don't give it lots of memory.

Try MAXIDISK to give your ramdisk 50% more space but make it only just big enough
to hold your live system.then add one of the removable types such as RAMBABY.ACC for
temporary use while copying stuff around.

When you have a hard Disk
UVK

SUPERBOOT

XCONTROL.ACC

Ghostscript

Also

CHAMELEON.ACC * n

SEBRA.ACC if you donb't have mono.

GDOS 5.0 when you have a hard disk or at least 4Mb.

(make sure GDOS 5.0 precedes MonSTEr or STRETCH otherwise it stamps on them.)

4313. Tape Streamers

Newsgroup: comp.sys.atari.st
Date: 1994-09-28 21:37:36 UTC
From: S.P.Taylor@bradford.ac.uk
Message-ID: <1994Sep28.213736.13895@bradford.ac.uk>
Source record: 180061

Hi.

I have just bought a second hand tape streamer and I have been trying to
use it with gemar. I do not have the manual for the streamer so I
am struggling and I hope you can be of some help.
I am using the streamerwith my Falcon and the SCSI ID that the drive
registers is

ARCIVE VIPER 150 21247

Also I am not familiar with the jumper settings needed. I have set the binary
ID jumpers to ID 2 and I have removed the parity jumper however there are four
other jumpers that I do not understand. They are labeled as follows:

CF0
CF1
CF2
DIA

Loading of a tape is succesfull and so is rewinding. However when I attempt
to backup some files an alert box appears saying "error writing/reading the
tape. Error writing/reading index, check condition (tape error)"

Winding the tape to the end produces the error "Streamer error winding tape:
check condition (blank check)

Erasing the tape is also not succesfull as the sequence times out after
about 1 minute.

Also the streamer refuses to let me make an index of the tape. The streamer
starts to rewing 1 section of the tape continuously back and forward. Then
Gemar bomb out with 4 bombs.

If you can be of any assistance to me at all could you PLEASE e-mail me. Use
the address sptaylor@brad.ac.uk and use TO DAVE as the subject of the e-mail.
Or alternatively reply on this newsgroup.

Lastly, does anyone know if there is a demo of Diamond Back 3 out. I saw what
looked like it could be such a file at the atari ftp at umich. However
when I tried to download the file I it seemed to be non-existant. ??

Thankyou

Dave.

Message-ID: <36cs7m$e3g@golem.wcc.govt.nz>
Source record: 180062
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Yes after have brought some German software, I find now there is no longer
any English support for these programs....

1. Script V1.0, only has a USA Dictionary, now up to version 3.5,
but only if you are German...

2. Auto Overscan, no later English version than 3.0zi, I have been told that I
need version 3.0zm for multitasking, but there is no English version..

3. Tempus 2.07, the very first program to be ported to English, now version
2.21, but only if you are German...

4. Signum 2, now upto version 3, but again only if you are German...

5. Papyrus, no English Dictionary or Thesaurus as of yet....

6. Tempus Word/Light, no English version..

7. Pheonix, no English version..

Why the BIG no support for English users of most of these programs..??

The only piece of German software that I have had good support is GSZRZ,
and you can update it via a BBS....

I am still waiting to get support for Auto Overscan, all I have been given is
the run around from the UK and zero Internet help from the Germany....

So what is going on in Germany, ??? are they going bankrupt..??

Please Please support your users, you have the Arari community at your feet...

I'm not sure the 8514 is an SVGA monitor. I read something today which
implied that the 8514 was a standard imcompatible with VGA of any type.

:-(

I find this very interesting.

I've just bought a 2nd hand TT with TT-Hi monitor. Although very pleased
with it, there is always the worry that I might have been better off with
a Falcon, or even a PC with a GEMulator ;-)

Would you care to elaborate on exactly what made you change from the Falcon
to the TT?

:-)

Roland.

The easiest way would be to ask the company to send you a manual. I have had great success with this in the past (they send me reams of stuff for free). I'm not sure exactly what the company name is, but often drive resellers can help you with this. They might even have an ftp site or gopher with this information.

From: hemurphy@prairienet.org
Message-ID: <36d2rn$fr3@vixen.cso.uiuc.edu>
Source record: 180065

In a previous article, peterw@io.org (ZIGFREID) says:

>I recently found two files in a directory that I can't seem to delete
>(trash). Actually they are empty directories but you cant place anything
>in them and when you try to do anything with them I get messages like
>"application not found..." and "path not found Tos error #-34. I can
>also no longer do a "show information" on the disk partition that these
>two directories are on. Any suggestions?

The only thing I could ever find to fix this was to reformat the hard
drive. I had a drive, which was an ST225 with an Adaptec controller (just
like the old Atari shoeboxes) that did this all the time. Eventually I
found that adjusting the ten turn trim pot on tha Adaptec--I think this
was the PLL adjust for the data seperator, but that is just a
guess--vastly improved the performance of this drive.
Hope you don't have to reformat!!

4319. Re: Calamus Fonts, OR NOT!

Newsgroup: comp.sys.atari.st

In a previous article, tasmeran@ars.ath.forthnet.gr () says:

>IK>I used to use Calamus v1.09, and had LOADS of fonts - who doesn't?!
>IK>I've since moved upto S, but a number of fonts won't load, and return
>IK>the messages;
>IK>incomplete font (or something similar)

As a one-time commercial font developer, I can tell you that our company
used to do some "tricks" to our Calamus fonts so that the Calamus font
editor would not load the font, thus preventing modification of the font.
Unfortunately, SL won't load those fonts either...
New versions of our fonts have had these tricks removed and work fine in SL.
Henry from MS Design

In article <36cavb$9rj@baugi.ifi.uio.no>, hallvart@ifi.uio.no (Hallvard
Tanger&#65533;s) writes:
>
>I have an STE with TOS 2.06 and 2MB RAM. As I don't have a hard disk
>I use about 1MByte for a RAM disk, and always start up with a startup
>disk I've made.

I would add:
FOLDRxxx.PRG - AUTO folder program that expands the 40 folder limit (just
replace "xxx" with the number of folders you want).
HSMODA04 - AUTO folder programs that fix the CTS/RTS bug and generally
improve the computer's serial communications
GUCK1.8 and 1STVIEW - file viewers that will view darn near any file you
come across. GUCK runs from the desktop (no memory
consumption) and views lots of picture formats, as
well as some document types. 1STVIEW is an
accessory that views almost as many files, and adds
RSC files to the list.
RECV_CAN.LZH - Allows you to put a recoverable trash can on the desktop;
dragging files to this program's icon meerly hides files.
Double-click on the program icon to see what files have been
"deleted," and either permanently delete them or indelete
(unhide) them.
ALIBI17 - Creates an alias of a program; put aliases of your most used
programs in one folder so you can just double click the alias to
run them, rather than clicking through a bunch of directories.
LOADINF - Install it as an application for *.INF files, then set up a
different NEWDESK.INF file for each task (DTP, Telecomm, etc.)
and when you double click on the INF file, your desktop will be
automatically configured.
DESKTIPS - this text file (available at HENSA and other archives, or direct
from me) tells you all about the NEWDESK.INF file (and how to
use LOADINF). A real must if you want to get the most out of
your computer.
TWOINONE - Multiple archive shell. Very nice, and available in both
English and German.
PROTECT6 - From Lars Erik Oesterud, this is a boot-sector and link virus
monitor. Good way to protect your system, and cheap shareware!
ACC13 - AUTO folder program that allows you to load accessories from a
folder.
SUPERBOOT 8.1 - Select auto programs, Desktop INF, Accessories, and any
other type of file you want at boot-up.
SILKBOOT - eliminates the 90 second boot-delay by polling ASCI device 0 for
a "ready" signal.

ST TOOLS 1.93 - good shareware disk editor/repairer/optimizer. Defragments
any drive.
FOLDER SORT - Lets you sort the order of files in any folder (esp. the AUTO
folder!). Rock-solid opperation.
DC or Diamond Format - two great disk formatters. (use 80 tracks, 10
sectors/track, twisted format for reliable and fast
809kb disks.
Diamond Find - find any file on any drive.
LED Panel 2.7 - AUTO program that can show Capslock, drive read/write,
time, and date or any combination of those. Completely
configurable.
Schoner - simple, but very nice accessory screen saver. Freeware, I think.
Midnight - better, and more expensive, screen saver accessory.
SCROLL FIXER - by Ian Lepore. If you experience double scrolls when you
only clicked for one, this accessory solve your problem.
Something to change the system font. Sorry, I can't remember the name of
any of these programs.

I strongly suggest one of the following commercial programs:
Warp9 ST - Speed up your system (screen drawing, actually) by several
hundred percent, have a built-in screen saver, change the system
font and the desktop pattern (replace it with a picture, if you
want!), mouse accelerator, use function keys to select dialog
box choices (F1-F3) (this can also be done with DC Funk Alert),
and more.
NVDI - Does the same job as Warp9, only speeds things up even more and is
(by most accounts) more compatible with programs. Includes GDOS and
lets you change the system font, but lacks the other ammenities of
Warp9.

Once you've given one of these a try, you'll never want to work without
them! There is an old version of Warp9 called Quick ST in the public
domain. You might check it out; it has about a 150%-200% overall increase,
though it isn't so fast as either Warp9 or NVDI, nor is it nearly so
compatible with application programs.
Other than that, sounds like you've got all the right programs.

>On this disk I have various useful utilities, like in the auto folder:
>
>-automouse (mousekamania)- let's you use custom mouse pointers, even
> moving ones!

Another great shareware program from Charles F. Johnson!

>-Selectric alternative file selector, with copy/move/delete functions
> etc. so you can do that within a program!

The best file selector!

>for ACC I have the following:
>-Chameleon (2 of them!) for loading/unloading (most) accessories without having
> to reboot the computer and installing new accessories all the time.

>-Mdisk reset-survivable RAM disk

These two are staples on my desktop, too. (TOS 2.06, BTW)

>-N_capslock (I think that's the name) shows if the capslock is on or off
>by showing
> a black or white box in the upper right corner (does anyone
>know if this
> is available as a prg that can be put in the auto folder?

See LED Panel above.

>-mauswindow window-topper; you don't need to click on the new window to
>access it, just
> moving the mouse to the window you want to use will highlight it!
> (it would be nice to also have this one as an "auto" program)

I think that a program called TOPDOWN does this, though I'm not sure (it is
an AUTO program, though :-).

>on the disk I also have a nice text editor called
>-7up, which is a program, and also
>-Edith 1.0 which can be used as an accessory.

You might also check out Everest. In my opinion, Everest is a more stable
and generally better program (though doesn't look so pretty ;-).

Best Regards,
Tom

: You'd think!

: So when are you sending me one of those P90 machines? C'mon, pretty
: please? If it's got a reasonable amount of RAM in it (hell, even
: without, I'll use a large swap slice) I can start unleashing my BRA1N3
: on POV-Ray...

Actually, it really wasn't that expensive. I rolled my own with one
of the newer Intel motherboards (one of the working Neptune chipsets).
The motherboard and CPU (about $1100) is the cheapest component other
than the cards inside. The Barracuda (in an external case) runs
about $1400. Then there's the 32meg SIMMs....etc....It's a screamer
though. With BSDI/386 as an OS, I can easily run 50+ simultaneous
users on it (and maybe as many as 100 with more RAM).

Cheers,

Chris

Hi Roger!
In comp.sys.atari.st you write:

>Yes after have brought some German software, I find now there is no longer
>any English support for these programs....
[...]

>I am still waiting to get support for Auto Overscan, all I have been given is
>the run around from the UK and zero Internet help from the Germany....
-
Most German developers are not connected to the internet. The
German "Maus" (<-german word for 'mouse' it's a nationwide net of
local BBS] is very popular instead.
(about as 10-20x more postings than on the usenet.)

I've just forwarded your article to the Mausnet, so hopefully you
will get some mails (or even support) from Germany.

>So what is going on in Germany, ??? are they going bankrupt..??
-
I don't hope so!
Some developers recently said the market is regaining from
conciousness ;)

I hope you'll get some answers!

bye -thommy

BTW: What does BBS mean :-?
P.S. sorry for any mistakes, but here's no spellchecker and no
dictionary...

] >"application not found..." and "path not found Tos error #-34. I can
] >also no longer do a "show information" on the disk partition that these
] >two directories are on. Any suggestions?

A quick fix is to get a sector-editor (DLII, Disk-Doctor, EdHack,
Knife-ST etc.) and change the first byte of the filename(s) to E5
this tells the OS that they're deleted. Then, if possible, do a cleanup
of the directory etc. which will destroy their FAT entries & erase them
from the directory list.

Do a string search for one of the other directories in the same location
to find them. I've done this in the past, and while it's not supposed
to be a very friendly way to do things, it's never caused any problems.
(At worst you lose 1k of space which can be fixed after a defrag/cleanup
etc.)
```

>- Rahin
> (rahin@scs.leeds.ac.uk)

Funny to answer my own post.

I connected the 8514 to a PC with VGA output and the monitor and the VGA output connectors are compatible and what's more the monitor displayed everything ok. The PC I tried can only output VGA, so 8514 can reliably be used as a VGA monitor. I'll try again with a PC with SVGA output and see what happens.

> And drawing all the standard GEM shapes (circles, ellipses...).

The last thing *is* possible - you just have to deselect those small "buttons" (a black circle) to the left of the boxes for font/size/style for those attributes you don't want chnged. I.e. if you want to change font globally, but not the sizes and styles you've applied, deselect the size and style buttons and you can change the font as much as you like...

I uploaded one to ftp.uni-kl.de under the name db3demo.tos - it is the one
which came with one of the UK mags a month or so ago. It should be available
from that site and others if it has been spread around. I tried Umich as
well, but it's so hard to get in there (even through the msdos "backdoor")
so I was unable to upload it.

The one on the coverdisk, is not of much use, AFAICR. All it allows you
to do, is go through the motions of backing up, using the demo, and not
actually back up anything...

4334. Help! Connecting 2 hard drives?

Newsgroup: comp.sys.atari.st
Date: 1994-09-29 14:08:08 UTC
From: dunham@mpd.tandem.com
Message-ID: <1994Sep29.140808.12448@integrity.uucp>
Source record: 179957

I've got a problem, and I need a quick answer. I sure hope you can help.

I have a Supra drive which has been upgraded to a 105 Quantum and am running Supra v3.11. It works great. This week I resurrected an old SH204 by replacing the ST-225 with an ST-251 and formatted it with SUPFMT, coming up with 65 MB. It also appears to work great, though I was surprised to find that the Supra utilities worked with it while my ICD Pro utilities would not.

My problem is this. My intention for the old SH204 is that it be the hard drive for my son's machine, which is currently a floppy-only machine. I need to transfer a chunk of stuff to his disk from mine (yes, he has his own paid copies of most of it, and I'll be paying the share-ware fees on the remainder), and I've only a short time to do it this evening. I need to take this drive with me when we go to see him this weekend (he's 222 miles away at school).

My plan was to change the SCSI address of his adaptor, plug it into mine, and transfer directly, since doing it off of floppies will take longer than I've got. This does not appear to work. ICD Pro's IDCHECK re-cognizes the Adaptec controller in the SH204, but nothing else seems to. I've tried with the SCSI address set to 1 and then 3, but only IDCHECK notices. Most of the ICD utilities won't work because neither has an ICD host adaptor, and both are set up as Supra drives. Nothing on my Supra disk seems to even notice the second adaptor.

Can you shed any light on this before I give up and send the drive off to school mostly empty, leaving him to load it himself from the original floppies? (Yes, I know there are worse things I could do to him, but he just recently upgraded from his old 800XL and is still sorting out the new environment.) Thanks for any assistance you can offer.

I am now running Papyrus at the office as the default easy-to-use text editor and word processor. For most of the office use (fax cover sheets, single page letters) it is fine. However, when producing some longer documentation I have been disappointed by the fully justified text. The package seems to be very poor at fitting words in to columns, seems to have only manual hyphenation. This makes the finished document over large and quite ugly. As a TeX user I am used to a much better final product.

Does anyone have any ideas about beautifying the output.

4339. -SC1224 monitor making high pitch noise...is it broke?

Newsgroup: comp.sys.atari.st
Date: 1994-09-29 15:43:37 UTC
From: quest@panix.com
Message-ID: <quest.1131241057A@198.7.0.1>
Source record: 179953

Just bought a used SC1224 Atari monitor.....I am waiting for a special video adapter cable to enable me to use the monitor....but nonetheless, I wanted to make sure it was not DOA. I plugged it in.....but have not connected the video connector yet (waiting for adapter cabling). When I turned on the monitor of course nothing comes on screen (and I was not expecting anything visible), but I have noticed a very high pitch noise that's being transmitted from the monitor. Is this natural? Is this due to the fact that I don't have the Video connector/adapter connected? Is the monitor on it's last leg? Any Help would be appreciated (as I am a total nitwit :-I when it comes to Atari products).

Thank you very much,

Lance

4340. Big News - Atari/Sega

Newsgroup: comp.sys.atari.st
Date: 1994-09-29 15:50:44 UTC
From: L676791@LMSC5.IS.LMSC.LOCKHEED.COM
Message-ID: <170407C6CS86.L676791@LMSC5.IS.LMSC.LOCKHEED.COM>
Source record: 179961

The following article appeared on the front page of the Business Section of the September 29 issue of the San Jose Mercury News:

Atari drops suit against Sega

-The deal: Sunnyvale firm will get $90 million for video game giant.

Scrappy Atari Corp. of Sunnyvale said Wednesday it will drop a patent infringement suit against Sega Enterprises Ltd. in exchange for $90 million it badly needs to promote its technically advanced - but still struggling - Jaguar video game machine.

Industry watchers said the deal makes perfect sense and gives each company something it desperately needs. Atari gets money. Sega gets technology and stock in Atari. They both get some of each other's game titles. etc. etc.

The article goes onto say that Sega will buy 4.7 million shares (7.4 percent) of Atari stock, and also pay $50 million cash, and that Atari will get rights to games like "Sonic the Hedgehog." This all has to do with a patent infringement Atari had against Sega. If you would like to read the entire article, go to your library, or look it up on America On Line. Unfortunately, if you have an Atari computer, you can't get America On Line unless you have a Macintosh or PC emulator. (GEnie sucks) --Mark van Wyk

Multivolume Archivers (on ST)

(maybe this should be added to the FAQ?)

As you probably know, DOS has an ARJ archive program that can split the compressed file on the several disks. Sadly, ST has only ARJ de-archivers. But despare not, there's a solution!

To be exact, two solutions:

1. Compress files beforehand, 'Split' it into disk sized pieces and save them on the disk. When you want to assemble the archive, you have to 'Join' the pieces before decompressing them.

2.IMO much better method is to use GNU Tar. Without MiNT you also have to compress the files beforehand and use something like: 'gtar -cvMf comressed_file destination', where the options mean 'Create Verbosely a Multivolume File'. You will be prompted for another volume when the current one runs out of space.

With MiNT the situation is significantly better. If you have GNU Zip (gzip, not to be confused with the archiver Zip/STZip) compressor in your path, by giving gtar the '-z' option you can pipe the file(s) to be tar'd through the gzip. To 'Create Verbosely a gZipped Multivolume File' you use 'gtar -cvzMf destination files...'.

If you want to squeeze out a couple of kilos (10-20) more archiving space from your floppies reliably, you can create a 'raw floppy' which doesn't have a filesystem. These floppies have to be preformatted, mostly to a certain size. To use raw floppies, you need to add a raw floppy device into MiNT (eg. ps0 from atari.archive.umich.edu directory /atari/Mint/Device...) and then use this device as the destination file for gtar. BTW. This is a very compatible method for exchanging files between Atari and different Unix (or alike) systems like Linux...

Anybody have any comments or additions?

Well, I admit that it can be done that way.. But as in many programs you simply
press CTRL-DEL, for example, and as one very often needs that function, there
might be a better solution than two key-combinations? Different people like
different things, and so on ;-) ...

I already use Kandinsky and MyDraw in parallel with Papyrus - but neither of
them knows CVG format =-(And I can't afford X-Act Draw in near future -
especially, since nobody sells it in Finland..

> |> them daily. RTF is good, but... Any hope?
>
> Well, isn't RTF already a good way to exchange files with Word?
> What's wrong with it?

Well, the point is: although one can always use separate programs to do different things (e.g convert CVG/EPS graphics to GEM, or Word files to RTF, etc), it really disturbs your work when you have lots of those "alien" files to work with..! Without multitasking, especially, it's very nasty to have to visit another program just to be able to import a CVG picture - when your hard disk is filled with them ;-) ! I think, CVG is _so_ common a file format in Atari world that it should be supported better - especially, because it has much less compatibility problems than the notorious GEM has...

There's nothing exactly wrong with RTF - but as some people make documents in PC, containing graphics, etc - those graphics at least disappear when you want to continue your work in Papyrus. As Word is the actual standard of PC world, it'd be very handy to have a "Word-compatible" Papyrus, don't you think?

To the end; I'm using OUTSIDE 3.2 on Falcon with Papyrus - and there has appeared some nasty crashes when trying to search through a pretty large (about 80 pages of text and pics) document. I'm using 2 Mb as ST-RAM and 2 Mb as "TT-RAM" in Outside, 32 kb block size, and no ROM to RAM option. This seems to be some kind of a problem in memory management somewhere. Perhaps in Outside 3.2 - I don't know.. The current version in 3.3 I think. Do you know if I should upgrade to 3.3, or any other help?

Greetings, Tommi

4345. Apex Media Development - assistance required.

I dimly remember something about the Atari host adaptors not being able
to handle anything but SCSI 0. Supra drives can use multiple IDs though,
so you should be able set the SH204 to 0, the Supra to something else,
and boot from the new drive. Hope that helps.

You might want to call some folks (Toad @ 1-800-448-TOAD and D&P
@ 1-800-535-4290) and ask about the Xtra-RAM upgrade. I believe they have a
board that can add 4mb to a 4mb ST (8mb total). I think they are also
going to come out with a MegaSTE version that plugs into the VME slot
and does the same thing.

Strangely enough, it appears that ST computers have been able to support
more than 4mb for some time. My MegaSTE field service manual talks about
being able to access another 4mb of "external memory". I believe the Mega
machines had this as well (as of TOS 1.4 perhaps). I think this would
have the same restrictions as TT memory, in that you could not step over
the boundary (for example, a program could not use 5mb in one hunk). I could
be wrong about this. Hope that helps.

As for reliablility, since I switched to NVDI, my system has been robust enough for me to turn on write caching in the ICD software (something I never felt comfortable doing, as I would get a crash or lockup about 1 time out of 10). I hardly ever see any bombs anymore, and it is usually something for which I can figure out the cause (no more "mystery bombs"). Also, several programs that I had labeled "buggy" and put away years ago are now rock-solid with NVDI. I have gone through the whole progression (TurboST, QuickST, Warp9, NVDI), and IMHO NVDI is miles ahead of the others. Note that NVDI is also a full GDOS implementation, so it is roughly equivalent to Warp9 and G+Plus together.

That is not to say that Warp9/QuickST are not good products. The difference between a bare machine and one with any of these installed is amazing. I can't imagine working on my ST systems without a screen accelerator anymore. I just feel that NVDI is the cream of the crop, by a considerable margin, and worth the extra money (really not that much extra, when the GDOS stuff is factored in).

I do wish the Codeheads would split out the screensaver portion of Warp9 and sell it separately. It is probably very closely tied to the acceleration routines, though, so I doubt it could easily be done :-(.

I've heard this before, from several people; everyone seems to agree that NVDI is the better buy. Unfortunately, I've had Warp9 and G+Plus since before NVDI came out, and I don't particularly want to pay $80 for a new screen accelerator. However, I have seen used versions (or at least older versions) of NVDI for substantially less than $80. Does anyone know, or have any opinions, what version of NVDI is really the minimum (in terms of compatibility and speed) for a MegaSTE running TOS 2.06 (American TOS)? If some version less than 2.51 would suffice (what were the differences, anyway?) I would buy an older version and just upgrade when I could afford it.

Thanks,
Tom

>like this for some reason, and if [FOLDRxxx.PRG] lets you change
>the limit to a higher value, why not make a fix program that lets you open
>an unlimited amount of folders?

There is an fixed-size area in which the operating system allocates certain
data structures for its own use. Each folder encountered uses, if I remember
correctly, two 64-byte structures. These are kept around for a laudable
purpose, namely to speed up later filename lookups, but the downside is that
the area may run out. FOLDRxxx.PRG allocates more memory and links it only
the list that Tos keeps of 64-byte-chunks available for use; but again, it
is a given amount of memory. Without virtual memory, it's hard to do better.
Of course, it would have been better to maintain a purgeable cache of folders,
but they didn't code it that way.

Worse yet, there is a bug in 1.0 (don't know when it was fixed) where if you
have a folder, say \USR\INCLUDE, that contains both some files and a subfolder
(say SYS), and you repeatedly search for files at that level without ever going
into SYS, the folder memory is chewed up very rapidly (it keeps creating new
structs for SYS, but sort of forgetting that it did so).

I've said it before: if people are going to write operating systems with bugs
in them, they ought to have a reasonable way to patch them (or distribute the
source!! Long Live Linux!!).

4356. FAX on ST without ZYXEL-Modem??

Newsgroup: comp.sys.atari.st
Date: 1994-09-29 23:59:19 UTC
From: moth@wega.fibronics.de
Message-ID: <1994Sep29.235919.10225@eurom.rhein-main.de>
Source record: 179952

HI!

I got a modem which is able to send/receive FAX, but not the way
ZYXEL-modems do: The (new?) EIA 2388-standard should be CHIP-INDEPENDENT
(so the users manual..). The modem has the build in standards V27ter, V29,
V17.
I looked on many FTP-Sites for FAX-software for the ST, but all I found
depended on a ZYXEL-modem.

Does anyone know about a ST-FAX-software which supports the newer standards?
I do not intend to send many faxes, so the software shouldn't be very
expensive.

Thanks in advance

Thilo (moth@janus.c2c.de)

In comp.sys.atari.st you write:

|> - Papyrus doesn't work under Geneva. The horiz. ruler freezes the
|>program when on; without it Papyrus works even with Geneva. Is the problem
|>in Geneva or Papyrus - and will there be a solution..?

>> I think that this rather is a problem of Geneva. papyrus is known as
>> a very clean program, which runs both under MultiTOS and MagiC.

>Any people from Gribnif there reading this..? It'd be nice to get these two
>working together..

(that subject might get their attention a little more... :)

I'm thinking about getting Papyrus; I haven't seen it yet, but from what
I've been hearing, it's very good. I couldn't live without Geneva, so if
it's true that it doesn't work with Geneva, something might oughta be
done about it...

DOWNLOADING FILES, Instructions:
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR] OR use the number address,
NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once. i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having to reply "y" for each
file
when asked "get {filename}?".
12) close [CR] to end (go back to ftp and
13) quit [CR] to go back to UNIX or.......
14 bye [CR] to end and go back to UNIX

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.

- Most files are compressed. Use an appropriate program on your computer on which the programs
were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate uncompress program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...)
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an
other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer.
i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

Enjoy!
Brian

That is what stopped me as well. I now wish I had not waited as long, as
I undoubtedly got rid of some programs for which the only problem was
incompatiblities with my screen accelerator.

> However, I have seen used versions (or at least older
> versions) of NVDI for substantially less than $80. Does anyone know, or

> anyway?) I would buy an older version and just upgrade when I could afford
> it.

I took advantage of Toad's sale of version 2.11 NVDI for $40, and that is
what I am still using. Thus, my comments were in fact geared toward an
old version of NVDI. I'm running TOS 2.06 on a MegaSTE too. Oh, I hear
that version 3.0 of NVDI is out or about to be out, so perhaps there will
soon be great deals on 2.51 (doubtful, as I think the deals for 2.11 were
also due to a company change, but one can hope :-).

First of all, please break your line around column 78 or so. Most newsreaders don't like huge paragraph-length lines.

As for HSMODA04, it is simplicity itself. Drop drivin.prg into your auto folder. Drop mfp.prg into your auto folder. If you are using an ST or STE, you are done. If you are using a MegaSTE or TT, drop, scc.prg into your auto folder. Check to make sure they are in that order (drivin must run first). Reboot. The default settings within the programs should be sufficient for you. If not, you can use the setter.ttp program to set options within them (run setter with the program you want to change as the argument).

Note that English docs are at the end of the German ones.

4363. Are there any DSP Modems?

Newsgroup: comp.sys.atari.st
Date: 1994-09-30 07:48:34 UTC
From: ac_green@postoffice.utas.edu.au
Message-ID: <ac_green-300994174834@mg4_67.its.utas.edu.au>
Source record: 179964

A friend of mine is wondering whatever happened to the DSP based modem that was talked about around the time of the Falcon's release. He would like to know because he is getting a new modem but doesn't want to hand over lots of cash only to find out that there is a supposedly cheaper and faster alternative in a DSP based modem.

I would also be interested in this information but I think I'll just upgrade to a standard faster beast that works with my ST's also, unless they are significantly cheaper.

So does anyone know of any? I'd like to know prices and retailers/distributors please.

Thanks a lot,

Anthony Green

The Sun 3/80 is about 2/3rds the speed of a TT (I've got both so I can
compare them, like for like). The 3/80 is slow relative to todays Unix
boxes. It uses a 20MHz 68030, this is equivalent to a 33MHz 386PC. The TT
running the alpha test version of Linux gives 7.95 Bogomips, equivalent to a
40MHz 386 running Intel Linux.

Linux is quite a good little Unix-like OS. You'll not find many people who
are working on Linux using the term "d00dz" as they are mostly graduates
with a great deal of computing experience, some are even specialists in
operating system design. The people developing NetBSD are just the same sort
of people as those developing Linux.

The current incantation of Linux/68k isn't much use, but it is still in the
relatively early development stages and nowhere near ready for general
release.

Yes, there are...

You may get a list from hensa (micros.hensa.ac.uk), in the directory:
micros/atari/tos/n/n168/

file: ftplist.txt

You may also browse a page with this info, and links to other sites,
via hensa's WWW server. URL: http://micros.hensa.ac.uk/

and follow the Atari trail, and look in the 'Other interesting pages'
section.

Hope this helps.

|> tar'd through the gzip. To 'Create Verbosely a gZipped Multivolume File'
|> you use 'gtar -cvzMf destination files...'.

No, this won't work, GNU tar does not allow this. And it would result
in a deadlock anyway because of the blocking Pfork(): tar would have
to both write to and read from the pipe connected to gzip, since it
must reblock the output. That's why it also doesn't work under MiNT
if tar reads a compressed archive from stdin or anything other than a
plain file.

So you must do the same as without MiNT: first prepare a compressed
archive as a plain file and then write it with tar as a multivolume
archive onto the floppies.

Ok. I'm Stephane Boyeau stfb@castor.unice.fr also known as Stfb.
I have a shop near Cannes (in France) to sell Atari software and hardware.
I'm the first in France to sell HighSpeed Boards for Falcon.
I'm gonna do my own speedup board for Falcon (the one I sell for now is
imported card). I have a lot of informations about the hardware of the
Falcon and I have the schematics of the motherboard (that helps !).
I've done FalconSX (shareware) and FalconSX40Mhz (I sell it with the
boards).
I code in C and ASM. I'm gonna learn the DSP code soon.
If you want to know more about my activities, just Email me !
I have some nice projects about Falcon soft/hardware that I will talk
about as soon as I will finish it .

Regards,

Stfb.

Hi,

First of all has anyone got an e-mail address for Systems Solutions. I did have one once but lost it (saying that I wrote to them but didn't get a reply).

Next I'm looking for an Undelete utility and Defragmentation utility for my Falcon. I want them both to be able to work with the hard disk as I have utilities that do this on a floppy. If you know of any utilties that will undelete and defrag a Falcon's hard disk let me know where to find them (PD or shareware if possible as I haven't got much moeny).

Thanks,

Mark msh@dl.ac.uk

>like this for some reason, and if the above mentioned program lets you change
>the limit to a higher value, why not make a fix program that lets you open
>an unlimited amount of folders?

The Atari computers allocate a certain amount of memory to store directory information when they boot up. As you open folders, the directory information is stored in the buffer. Under certain circumstances (I don't recall what), that buffer can be flushed, but generally as you open directories, this buffer gets filled up. On TOS 1.04 and greater, trying to open more folders just results in a warning (something like: "Unable to Open Directory"). On TOS 1.00 and 1.02, there was a bug in the OS that could cause directories to be scrambled when the 40 folder limit was exceeded. This 40 folder limit is a feature; just an arbitrary limit that can be expanded through the use of programs like FOLDRxxx and many hard-disk drivers. Some people never reach this limit (especially if you don't use a hard disk), but others need to allocate several hundred folders. What you need to do depends entirely on how you use your machine.

Hello

Just writing to inform you that I (hopefully) will be taking over the posting of the FAQs, from Steve Ourada, as he does not have much time to do so. He has agreed to me doing this, and the news.answers moderators have also agreed, upon me completing the conditions they have send me.

So, if you want anything added to the FAQs, then please e-mail them to me.

Thanx
Danny

I don't think you have much to worry about. My dad's had an SC1224 for six
or seven years that makes a high pitched noise. The monitor works fine,
except for that sound. And since it was his third monitor - two others
broke under warranty - he never bothered to try to get it fixed. It has
made that sound since the day he bought it.

John,

Toad Computers sells an UpGrade Board that will upgrade a Mega to 8 MB. I
Don't know if it works on other ST's besides Megas. It uses SIMMs, I don't
know how Big or how Many. And for $39, they'll install it.

---FYI---
--Thanks--
---Ben---

P.S. The Board (Without RAM) Costs $129.

Isn't it possible to make the buffer resize itself depending on how many
folders you open? Say set it to 40 to start with, and then when (if) this
is reached, allow it to grab more memory. Also to release this memory
when it is not needed any more.

Just an idea...
Phil

very interesting. But keep in mind: But you have to distinguish between
Atari (which builds the big game consoles and belongs 100% Time-Warner)
and
Atari (which builds these amazing ST/TT computers and belonged to Jack Tramiel).

Which one is it ?

Look at an immunized bootsector. The newest version has an 8-digit
phone-number (8 digits after +47 that is). The old one has 7
(Norway changed the phone-number system a while ago :-)

> QuickST3 could be faster.

I have tested both Warp9 (much slower) and NVDI (faster at graphics, but
much slower than QST3 on pure text-output).

You unfortunately need a different printer driver for every aplication
on the Atari, so it would help if we knew which app you were using!

If it is a Speedo app, then Speedo 5 and NVDI 3 (I think) have
Laserjet IV drivers.

Isn't there something called a 'Bridge' sold by the Calamus people
which does exactly that? It might cost a few (!) pounds though.

I think MS-DOS has a similar er, feature which is got around using
BUFFERS= in config.sys.

I haven't noticed the folder problem running under MultiTOS with
MinixFS partitions however; perhaps the feature has been well and
truly slain.

4382. scannerquestion

Newsgroup: comp.sys.atari.st
Date: 1994-09-30 13:23:46 UTC
From: leverenz@desy.de
Message-ID: <36h3h2$e09@dscomsa.desy.de>
Source record: 180023
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hi together.
A friend of mine has bought a so called "Professional Scanner II"
for an atari st. This device is to be plugged into the romport
of the st. Unfortunately, there was no cable in the package and
since he bought it at a liqudation (right word?) of a firm,
he has no way of getting the original cable. We tried
to phone the manufactorer of that device, but it failed up to know.

Finally the question: Does anybody know of cable between this
scanner and the st? Which Pins of the romport have to be
soldered to which pins on the subd-25 pin on the scanner?
Is it only a cable or an interface? If interface, how to build it?

The scanner: "Professional Scanner II"
from "Print-Technik in munich and vienna"

Questions over questions, any help would be great.
Answers preferred by e-mail.

ciao, Christian

Sorry, english is not my native language and i never hacked on an atari...

I imagine you could, Phil, though I doubt it could be done without moving GEM to RAM and then "patching" the necessary routines (and probably adding a few as well). Maybe someone else knows?

If no one responds within a week or so, and you want an answer, send me email to remind me of your question. Then I'll contact Keith Gerdes and maybe Charles Johnson on GEnie and see if they have any idea.

I read in USA Today (today, as a matter of fact) that Sega has bought $40 Million of Atari stock (giving them a 7.9% share) AND has agreed to pay Atari $50 Million in CASH (liquid assets) for video game patent infringements in a lawsuit that Atari filed against them last year. This was noted as a LONG TERM deal, and will allow both companies to transfer/use the same games on future systems. . .

Good for Atari. Hopefully good for us someday . . .

I -do- have a Macintosh computer and I -still- hate AOL's clumsy and horrendously slow graphic interface. It's tolerable at 9600 baud but at 2400... ugh!

>(GEnie sucks) --Mark van Wyk
^^^^^^^^^^^

A seemingly very intelligent comment there, Mark. ;-) Care to elaborate (using adult terminology, please) on why you feel this way about the only commercial comms network that still cares a twit about Atari users??? It may not have the fancy graphics and push buttons that one is forced to slog their way through on AOL, but with ST Aladdin software, who cares? (all IMHO, of course)

-Hutch- @ Fair Dinkum Tech

You could try DOUBLE2.PRG it can interlace the STE screen giving you
640 x 800 in monochrome. If interlace is not ok it can scroll too..
And it's completly free - Give me a hint and I'll uucode and send..

Just a request here on behalf of many who slog their way through the
Atari newsgroups every day on the Usenet and other online services:

PLEASE... when you post a message to ANY newsgroup on the Usenet, keep
your messages to a width of 80 columns or less and use a hard carriage
return at the end of each line. That means no lines longer than this:

0--------1---------2---------3---------4---------5---------6---------7--------8

A lot of folks have been merrily typing away, entering a huge post and
never pressing the RETURN key. This has an adverse effect in two ways:

1) It makes your post extremely hard to read from most newsreaders and
impossible to read from some of them (and doesn't reflect very well
on you as the sender, either);

and

2) It makes your post a likely candidate for being deleted from the
queue of those posts that get echoed (relayed) to other online
telecomm services. No one wants to manually clean up such posts so
the simple solution is to just delete them. Zap!

Remember, not all newsreaders are created equal. So be thoughtful and
take just a moment to properly format your posts. And would it be too
much to ask folks to stop using those darn HUGE sigs? Yeh, thought so. :)

Cheers,

-Hutch- @ Fair Dinkum Tech

Sure, they should have made it a dynamic structure when they wrote it the
first time. The problem is that the OS is in TOS, so little hacks like
this are hard to implement without some major work (for an individual).
As for why Atari didn't fix it right, perhaps they didn't have the room
on the ROMs, or perhaps they just felt that since there were so many software
fixes that it wasn't a priority.

IN>the theory so if you wish to critise me do so from physical experiments on
IN>a MEGA STe otherwise don not expect an answer.

I have a Mega STe (in fact, I'm using it right now) with an old ICD host adapter running a Maxtor and a Syquest, and the ICD Link running a NEC CD-ROM. The internal HA on the MSTe is currently set for ID 3 (although the drive has long since been removed). All items did work together previously. As I said, the internal HD is now gone and so there's nothing left to prove that it did work except my personal experience - but what you said is rubbish insofar as the ICD not working with the MSTe internal HA.

4404. Cool cheap printer

Newsgroup: comp.sys.atari.st
Date: 1994-09-30 16:39:17 UTC
From: boyd@hardy.math.fsu.edu
Message-ID: <36hevl$eto@mailer.fsu.edu>
Source record: 179994

Hey, I just bought a Canon BJ-200e inkjet printer for my girlfriend, and
also played with it on my ST. Very cool! I have not really been keeping
up with the home printer market (I either used my little Star 9-pin dot
matrix, or brought it in to serious laser printers at work via PostScript).
This guy is dirt cheap ($270) and prints laser-quality quite quickly.
I'm using the BJ-10e driver in Pagestream, and the printouts look great.
It can also emulate an Epson LQ series dot-matrix, so one can take advantage
of all those 24-bit printer ST goodies out there (like the programs that
will dump the screen with alt-help at 24-pin resolution instead of 9-pin).

In general, I'm impressed. Inkjets used to suck (back when the ink was
water-soluble), but this unit really impresses me. Printout speeds using
Magic Spooler and Fast-Print combined were about as good as using the MS
Windows driver on a PC. Basically, about a minute or two per page, depending
on the density of the graphics. Text-only pages printed in about 30-45
seconds. Also, it is very small (it sort of "stands up") and easy for me
to swap between our PC and ST systems. It only takes up about 10"x6" on
the desk when not in use (you pull out the output guide when you use it,
push it back in when you don't).

Jeez, did I really pay $600 for an Epson MX-80 all those years ago? :-)

4405. Multi-player games before 1983?

Newsgroup: comp.sys.atari.st
Date: 1994-09-30 17:06:13 UTC
From: kowalski@access.digex.net
Message-ID: <36h636$cn7@news1.digex.net>
Source record: 179984

I am doing research on the history of video games and am curious to find if anyone knows of multi-player games that existed before 1983.

The game should allow two players to play each other in a way where the two players are not looking at the same screen, but they may see the other player on their screen. They may be connected through modem, over network, or whatever...

Any clues?

Rob Kowalski

Actually, the fact that one is not constantly bombarded by free AOL subscription disks is a good reason to own an Atari computer. Since getting 2 PCs to add to my computer setup, I think I've got about 8 of those floating around... ugh.

>>(GEnie sucks) --Mark van Wyk
> ^^^^^^^^^^

I may have to give up GEnie now that I've moved all telecomm over to the PC since there's nothing on the PC that comes close to ST Aladdin for accessing it (including PC aladdin) and I've been too spoiled by ST aladdin to go back to accessing it via a normal comms program.

```

In addition to the rest of the suggestions you have gotten, I would add Teradesk, now at version 1.39. Very nice desktop replacement, though you may not need it having TOS 2.06.

Check your DMA chip BEFORE you get a hard drive. If the number stencilled on it is 'C398739-001', adding a hard drive will be a piece of cake. If the number is 'C025913-38', your STe will have trouble 'talking' to the hard drive. (The DMA chip is a long (~5cm) chip under the floppy, next to the TOS chips.) The right chip for the STe is getting very hard to find, (I finally got one off a dead STe motherboard.) If you need one start looking now.

Source record: 179982

In article <36fana$d8h@altjof.ifi.uio.no>, hallvart@ifi.uio.no (Hallvard Tanger&#65533;s) wrote:

```
|<FOLDRxxx.PRG - AUTO folder program that expands the 40 folder limit (just
|< replace "xxx" with the number of folders you want).
|
|why is there a 40 folder limit on the ST? What happenes when you've opened
|41 folders- does the machine crash? Is this a bug in the system or is it
|like this for some reason, and if the above mentioned program lets you change
|the limit to a higher value, why not make a fix program that lets you open
|an unlimited amount of folders?
|
```

The simple explaination is that the way GEMDOS is designed, it requires a set of buffers for allocating directory entries. There is a defined limit in GEMDOS for the number of directories (folders) that can be open at a given time. This limit in the ROMs is set at 40.

One note: versions of TOS previous to 1.04 (or 1.4 if you are in the US) used to
use folders in the OS Pool and NEVER free them. This truly meant that if you went
into 40 folders, you would then crash. The good news is that in TOS 1.4, this problem was fixed. When you go out of a directory, the entry in the OS Pool is removed. What this means is to run into the 40 folder limit on newer versions of TOS, you would have to be in 40 folder at the same time! This would mean like 8 directory levels deep on several drives (not too many people do this).

The other piece of good news is that if you run into the problem, you can always increase the size of the OS Pool with FOLDRnnn.PRG to avoid the problem.

BTW.. This problem is pretty similar to the BUFFERS=xxx you see in DOS batch files for startup. DOS and GEMDOS are more similar than you might imagine! ;-)

] port speeds over 2400, Freeze Dried Terminal is a bit big and insists on
] doing batch transfers, when I only want one file, apart from that, it's a
] bit unfriendly and too complex for what I want. I just want something
] SMALL, QUICK, BASIC (within limits !), and RELIABLE.

Try changing #L in the send-parameters to #1 which will bring up a
file-selector rather than the batch-list.

Quick & Simple terminal & Z-Modem transfers.... If you don't mind the font,
ANSIterm isn't too bad (Only uses XYZ.TTP, but you could just rename
RZ.PRG or SZ.PRG to XYZ.TTP to suit your needs). Other than that most
everything else is quite large & frilly.... (Apart from the good ole'
commercial favourites like Flash)

For downloading, and reading and replying to messages, Aladdin is a great time saver; you can select topics to read off-line, download messages in those topics (new/all/etc) and read them off-line, then write a response off-line, and Aladdin will automatically post the reply. This is also true for GEnie mail. In addition, Aladdin will check the libraries of your choice for new files, allowing you to browse the list off-line and select which files to download (if any), and Aladdin will then automatically download them and logoff when the download is complete.

In addition, Aladdin has a built-in scripting language, so that you can automate tasks Aladdin doesn't normally automate.

The only disadvantage is that you really need a hard drive (or at least two floppies) to make good use of Aladdin; I didn't use it until I recently acquired a new MegaSTE with hard drive.

Regards,
Tom

Heh. Yep, it took a "Gribnif" in the subject line for me to see it. Dan has been in close contact with the programmer of Papyrus. The short answer is:

1. The next revision of Papyrus will work correctly with the current release of Geneva.

2. The next revision of Geneva will work correctly with the current release of Papyrus.

This was one of those cases where one program was doing something the other one did not expect. The next version of the program will simply not do that which surprised Geneva. And the next version of Geneva will know how to deal with that unexpected item.

Well Titan Designs in the U.K. do an Ideas Processor (really a glorified flowcharting program) called Thought! It isn't based around the normal flowcharting conventions but rather based around something called Jackson Structured Programming.

You can contact David Encil (the proprietor) on +44 21-414-1630 and ask him if there is an American distributor for this fine piece of software.

The free Atari 520 ST system is gone. Due to the volume of e-mail
I received I won't be able to reply to everyone, but thanks for all
the generous offers.

I never noticed the folder problem under MultiTOS at all.. I can imagine
when running tape backup software (like GEMAR) the folder space should fill
rapidly as it opens all folders on all drives to read the contents..
But, then again, I never ran GEMAR without MultiTOS as far as I can
recall... So I'm not sure, maybe GEMAR tricks the OS into a
'folder-memory-purge'.
How about 'Show information ?' from the desktop, it should check all
folders for sub (and sub/sub) folders so it must open them one at a time..
Well, I could try that right now... Just a moment:

DRIVE C: 9 folders 186 files in 4 Mb
DRIVE D: 26 folders 1133 files in 13 Mb
DRIVE E: 19 folders 933 files in 11 Mb
DRIVE F: 111 folders 1731 files in 44 Mb
DRIVE G: 26 folders 769 files in 14 Mb
DRIVE H: 260 folders 1313 files in 36 Mb
DRIVE I: 77 folders 454 files in 10 Mb

and finally:
DRIVE P: 65 folders 4798 files in 690 Mb (just kidding, this is the
CD-ROM, Monster Media disk no. 1 '94)

Well, I didn't have to reboot and I haven't got any FOLDRXX.PRG in my AUTO
folder so I guess MultiTOS has got its act together...

Hi. Thanks for all those who repied about the problems I had with my streamer. (For those who know what I am talking about it turned out to be a faulty streamer.)

Anyway I'm looking to buy a brand new 150 meg Tape for the Arcive Viper 150 (preferably formatted [is the erase option in Gemar the same as format?]) and I would be very gratefull if one of you could tell me a good place to get new tapes in England (Near Manchester if possible). Also I would like to know the name and spec. of the tapes that I require.

Thanks in advance for the help.
P.S. E-Mail replies are more convenient for me. Thanks

Please put To Dave as subject of reply via E-Mail

Bye.............

Well, speaking of cracked... I have seen a working Atari ST inside a PC
mini tower case. As the board of the Atari was too large, the owner simply
hacksawed the PCB in two, placed the two halves at an angle of 90 degrees
together and soldered all the broken joints together with
short wires........ At first I thought the owner was cracked but nope, it
was just the board, but it worked !!!
